

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

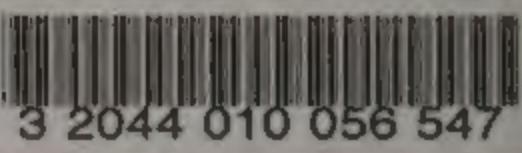

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

| CHAPTER II. . . . . | 27— 60. |
|---------------------|---------|

### HISTORY OF MONEY UNDER THE GREAT HAN-DYNASTY.

The Ts'in-dynasty. — The golden yi. — The Han-dynasty. — The leave-coins — Wen-ti grants the people to cast their own coins. — Speech of Kia-i against free-coining. — Practical view of the same question by Kia-san. — King-ti makes false coins. — Reign of Wu-ti. — His financial measures. — Representative money of skin-parcels and white metal. — Yik tsuu coins. — Institution of one general state-mint. — Excess of false coining under Yuen-ti, and advice given by his Minister to abolish money. — Information on the relative value of money under the Han-dynasty. — History of Wang-mang. — His regency and re-establishment

Page.

of the currency of the ancient kings. — His foolish institution of several varieties of representative currency. — His fall, the 5 tsu-coins come back. — Speech of Liu-t'ao on the disadvantage of making unnecessary alterations in an existing currency. — Decline of the Han-dynasty, the coin with the four outlets. — Bad currency of Hien-ti. — End of the reign of the Han-dynasty.

## HISTORY OF THE MONEY DURING THE PERIODS OF DIVISION OF THE EMPIRE.

The three kingdoms. — The Tsin-dynasty re-unites the empire. — Hwan-hien proposes to abolish the money. — Speech of the privy councilor Kung-lin against that plan. — The same question discussed in another part of the country. — Division of the empire into North and South. — The Southern empire, the Sung-dynasty. — A session of the privy council and advice not to coin too light pieces. — Wretched condition of the currency during the reign of the “Deposed emperor”. — View of the political events by which the four subsequent dynasties rose and fell. — Admirable speech of a Minister on the necessity that money should have a real value and be perfectly coined. — The Liang-dynasty. — Institution of iron money; its failure. — The Ts'an-dynasty. — The northern empire. — The Wei-dynasty. — Money is not used at all, the people enforced to use it. — Discussions on the institution of a new currency. — Northern Tsi-dynasty. — Assisement introduced. — Gold and silver money of the far west. — The Sui-dynasty re-unites the empire. — Unavailing measures to introduce a better currency. — Money superseded by other objects. — End of the Sui-dynasty.

## HISTORY OF THE MONEY UNDER THE T'ANG DYNASTY.

Kai-yuen-t'ung-pao-money. — Origin of the nail-mark on the reverse of that coin. — Opinion of later times. — Fragments of the annals of false coining. — Free coining discussed again. — The annals of false coining continued. — Reports of the collectors of salt and iron-duty. — Apparition of paper money. — Tyrannical measures to obtain the necessary copper. — Restrictions on the possession of ready money. — Ma-twan-lin's criticism. — Buddha religion laid under requisition and finally abolished in order to confiscate the copper vessels of monasteries and temples.

## HISTORY OF THE MONEY UNDER THE SUNG-DYNASTY.

The 5 imperial families. — Free coining and its effects. — A conflict between Church and State. — Speech of the emperor and reply of an

## P R E F A C E.

---

It is now two years since the first thought occurred to me to write a historical and critical inquiry into the metallic and paper currency of the Chinese, followed from original sources.

The source chiefly drawn upon and consulted by me has been "the Examination on Currency<sup>1)</sup>" by the Chinese scholar Ma-twan-lin<sup>2)</sup>, treated of in the VIII and IX Volumes of his great Encyclopedia.

Ma-twan-lin's life and works have been described by ABEL REMusat in the "Biographie Universelle." He was born in *Po-yang*<sup>3)</sup>, province of *Kiang-si*, probably about the year 1245, when the end of the *Sung*-dynasty was near, and the social condition of China was most miserable in consequence of an over-issue of paper money. Under the last emperor of this dynasty he held an important public office, but when the Mongols had conquered the Chinese empire, he resigned his post and devoted himself entirely to scientific studies. During twenty years he was engaged upon the composition of his great work from which the materials of this volume have been gathered.

1) 錢幣考.

2) 馬端臨.

3) 鄱陽.

In 1321 the first edition of his work was published under the title of *Wen hien t'ung k'ao*<sup>1</sup>).

According to *Ma-twan-lin's* own preface to his work 文 wen, signifies the historical chronicle, the purely historical facts as he found them in the Annals of the different Dynasties; 獻 hien are properly oral or written addresses and reports which are mostly the elucidation of the historical facts. I, therefore, prefer the Rev. Dr. LEGGE's translation of that title into "General Examination of Records and Scholars" to that of ABEL REMUSAT who tried to express its signification by the rendering "Recherche approfondie des anciens monuments".

Great is the praise lavished by European authors on Ma-twan-lin, and together with Confucius and Mencius he is of all Chinese authors the best known in Europe.

In the above mentioned biography ABEL REMUSAT says of him:

"On est certain de trouver sous chaque matière les faits qui y sont relatifs disposés chronologiquement suivant l'ordre des dynasties et des règnes, année par année, jour par jour. On ne peut se lasser d'admirer l'immensité des recherches qu'il a fallu à l'auteur pour receuillir tous ces matériaux, la sagacité qu'il a mise à les classer, la clarté et la précision avec lesquelles il a su présenter cette multitude d'objets dans tout leur jour. On peut dire que cet excellent ouvrage vaut à lui seul toute une bibliothèque et que quand la littérature Chinoise n'en offrirait pas d'autre il faudrait la peine qu'on apprit le Chinois pour le lire. On n'a que choisir le sujet qu'on veut étudier, et traduire ce qu'en dit Ma-twan-lin. Tous les faits sont rapportés et classés, toutes les sources indiquées, toutes les autorités citées et discutées. Il est à regretter qu'on ne se soit pas encore occupé d'exploiter cette mine précieuse, où toutes les questions qui peuvent concerner l'Asie orientale, trouveraient des réponses les plus satisfaisantes. Il y a même beaucoup de parties de Ma-twan-lin, qui méritaient d'être traduites en entier. ...."

<sup>1)</sup> 文獻通考.

After a careful study of Ma-twan-lin I readily agree to this encomium passed on our learned Chinese; only in one respect I must differ from it. Ma-twan-lin is not always equally clear and distinct. Compressed constructions which often cloak his exact meaning are of too frequent occurrence; moreover, he is peculiarly fond of using words in a strange secondary signification, not explained in any Chinese Dictionary. A comparison of many passages, and a profound study of the difficult parts will at last enable the student to solve these riddles.

This explains perhaps the reason, why except the MARQUIS D'HERVEY DE ST. DENYS<sup>1)</sup>) nobody as yet has listened to the call of ABEL REMUSAT, and edited part of *Ma-twan-lin's Works*.

---

As far as I am aware the important fragments in the two volumes of Ma-twan-lin's work are all quoted; those not interesting either with respect to language or history are paraphrased or entirely omitted. The explanation or interpretation of passages obscure either from the difficulties of the language, or because they were distinctive of the authors style, and showed a peculiar Chinese construction, I have given to the best of my ability, even when the economical part had no need of the informations given in those fragments. In a few instances the difficulties were beyond my strength; these passages I recommend to the special care and attention of sinologues.

It having been my aim throughout to preserve the sense and spirit of the original, many pages will be found disfigured by

1) In his meritorious work "Ethnographie de Ma-twan-lin, edited in the *Atlas du Géographe des peuples étrangers*" traduit du Chinois,

inelegant phraseology, but though this may offend the ear of the ordinary reader, sinologues will undoubtedly appreciate a faithful rendering of the peculiar construction and choice of words in the Chinese text.

To two remarkable phenomena in the Chinese language I have called attention as often as they occurred in the expounded passages.

1. The peculiar force of the final particle 矣 which, according to my conviction, is commonly used when the author or speaker expresses his subjective opinion, and which characterizes the thoughts and perceptions founded only on the individual nature of the thinking and speaking person; while, on the contrary, the final particle 也 gives to the words the character of an objective certainty proceeding from the nature of the subject itself.

In reading the classic authors my attention was directed to this fact by my much esteemed 老先生 Prof. HOFFMANN, and the more I advanced in my study of Chinese texts, the more settled my conviction became regarding the truth of his observation. The following examples taken from Classical authors may serve as illustration; to give here more I have thought unnecessary, as the passages of MA-TWAN-LIN, in which that peculiar force of 矣 is obvious, are all marked at the foot of the page.

CONFUCIUS says:

士而懷居不足以爲士矣。

"To be a scholar and love one's ease is, I believe, not sufficient to be considered a scholar."

The distinction between the two particles is clear from the next example in which both occur.

君源也。臣流也。  
濁其源。而求其流之清。不可得矣。

"The King is the source, the subjects are the stream.  
To make that source muddy, and yet to wish to have that  
stream limpid is, in my opinion, not possible."

MENCIUS too gives many instances.

是心足以王矣。

"The heart seen in this is sufficient (to my conviction) to carry  
you to the Imperial sway."

The distinction of the two particles shows itself again in the  
next phrase.

寡人之於國也。盡心焉耳矣。

(*The king says.*) "Small as my virtue is, in the government  
of my kingdom I do indeed exert my mind to the utmost."

Dictionaries commonly state that the character 矣 emphasizes the  
phrase. This is, however, no argument against my observation, as  
subjective views are mostly expressed with more emphasis than  
objective statements.

2. The great signification of the rhetorical inversion or  
ante-position in the Chinese language, in consequence of which  
that word and that part of the phrase on which falls the stress is  
transposed and emphatically begins the sentence. This is especially  
the case in the 言 parts containing the speeches and reports,  
the style of which the author or speaker intended to be elaborate.

This same transposition is found in most European languages  
and some authors make frequent use of it.

"Ein frommer Knecht war Fridolin"  
says SCHILLER, and begins his sentence with the predicate.

"A giant's strength we admire in him," writes CARLYLE under

the impression of the tidings of GOETHE's death. From every page of our modern literature examples might be gleaned, and in the writings of the ancients the same rhetoric peculiarity is found.

In the Chinese language and grammar that transposition has, however, greater significance than in any other language, as here all grammar depends on the position of the words, and when for the sake of rhetorical turns we are deprived of this guidance, and the Chinese author instead of 未有之 dares to write 未之有, the difficulties already besetting us greatly increase.

Ma-twan-lin's Book has in consequence of that inversion many a complicated construction which for a long time I was at a loss how to translate. The most important of these passages I have marked in a note.

---

And now I am at the end of my long labor, and see the book ready before me, I wish to express my grateful thanks to all who have assisted me by help or encouragement. To them whose names are found on the first page of this volume, I can give no better token of my deep acknowledgments than the dedication of the work they have shown to much sympathy with.

For much information I am also indebted to Prof. GUSTAVE SCHLEGEL, whose profound knowledge of the Chinese language was of invaluable assistance so me.

A copy of Ma-twan-lin's book I received from Prof. A. CARRIÈRE, Secrétaire de l'Ecole Spéciale des Langues Orientales vivantes; at the request of Dr. R. ROST of the library of India Office, the Rev. Dr. JAMES LEGGE had the kindness to send me the copy of Wan ki's Continuation of *Ma-twan-lin*; through the kind intercession of his Excellency the Minister of Fo-

reign affairs P. J. A. M. VAN DER DOES DE WILLEBOIS, I received from the Imperial Academy of Sciences at St. Petersburg the original bill of the *Tai-ming* dynasty with permission to make a drawing or photograph of it. Prof. A. SCHIEFNER, member and secretary of the Imperial Academy of Sciences at St. Petersburg was so kind as to offer me some Chinese bank-notes and bills of exchange of later times; and from Paris I received from the Ecole Orientale the scrip of a note, issued by a Chinese joint-stock bank at *Sang-hai*.

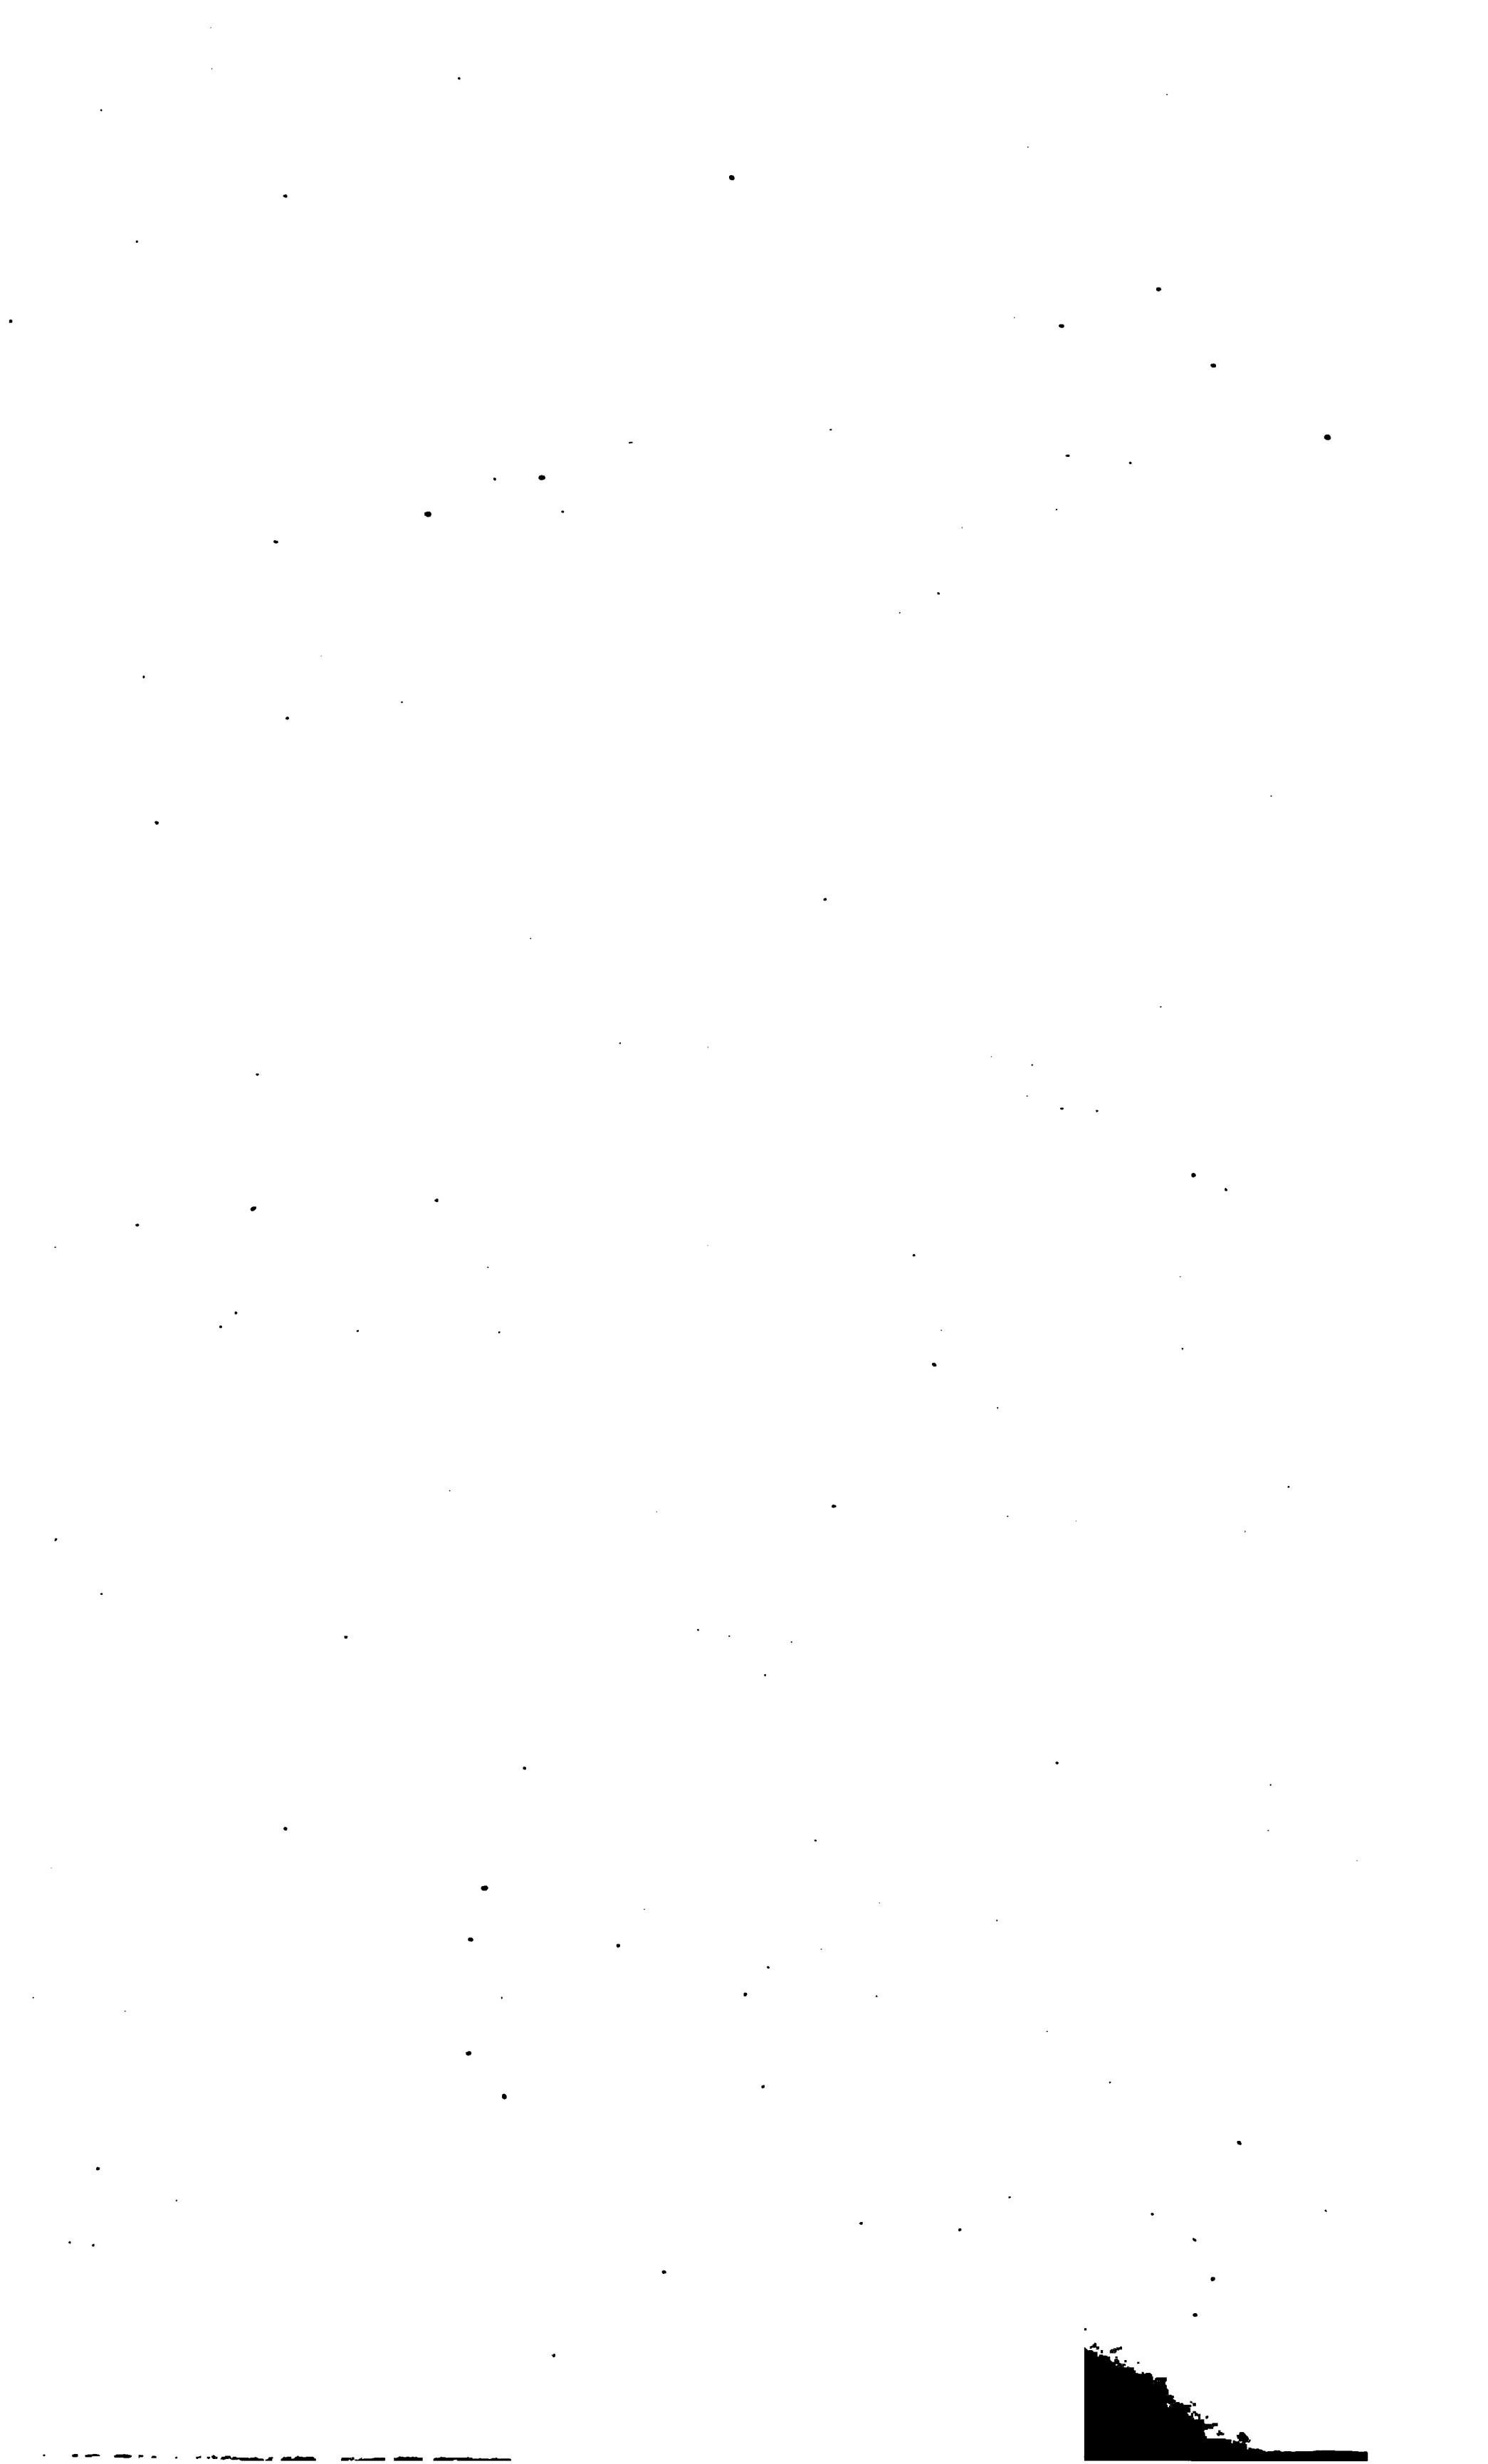

The photograph which is an exact reproduction of the original much worn bill, is obtained after a new process, invented by Dr. E. J. ASSER of Amsterdam, who had the kindness to supervise the execution of this work of art.

To these gentlemen and to many others, residing in my country, I openly tender my deep obligations for their ready and kindly aid.

Within a few days this volume will be launched from E. J. BRILL polyglottic printing-office into the world; very probably to be critizised and contested; but also, I am sure, to be appreciated by those who, taught by their own experience, know the amount of labor required to understand and explain a Chinese author.

The best wishes the author can give to his book on its way are those contained in the following passage of GOETHE's treasure of wisdom, "the West-Östlicher Divan"

Vor den Wissenden sich stellen,  
Sicher ist's in allen Fällen!  
Wenn du lange dich gequälet,  
Weisz er gleich wo dir es fehlet;  
Auch auf Beifall darst du hoffen,  
Denn er weisz wo du's getroffen.

## INTRODUCTORY CHAPTER.

---

An important chapter of the economical history of China was the subject on which I purposed writing my Academical Dissertation for the acquisition of the degree of Doctor of Laws; and as the mysteries of the monetary history always have had great attractions for me, my predilection has led me to attempt an investigation of Chinese Currency and Banking.

How far this investigation may claim to be a Political Economical Study is a question which has already often been put to me, while I was collecting the materials from Chinese and Japanese sources. And when the economist, judging by the title, opens the book and sees so many Chinese characters, I fear he will feel some doubt if the work can be of any interest to him and if the economical value has not been put too much in the background because of the desire to explain difficult passages in the Chinese text. It is therefore that in this introductory part I have imposed upon myself the task of giving an answer to the above question.

Perhaps the same answer that I have often given to the same question might suffice here, that the history of a commercial people which is the greatest as well as the most ancient nation in the world, of whose literature vast and valuable stores are still extant, who had come to the solution of many a question, social and political, long before it agitated the Western world, and whose theories, and institutions are all found back in Europe years and years afterwards, that such a history is worthy of being closely studied and carefully searched. But I feel here called upon to waive an answer in such general terms and to speak more in particular about the economical value of the matter treated of in this study, the more

so, as I wish to acquaint my readers beforehand with what they are to expect on a perusal of this volume.

However, before treating of the economical value of the subject, I may be allowed to state what on this head has already been communicated by European authors of different times.

There are many stories of medieval merchants and monks, which with more or less praise mention the use of paper money in the empire of the Great Khan, and at present hardly any work on Currency or Banking is published but gives some information as to the money and paper currency of the Chinese. Mr. MACLEOD<sup>1)</sup> and Mr. JEVONS<sup>2)</sup> tell us many particulars of Chinese paper money; DR. OTTO HÜBNER in his work "Die Banken"<sup>3)</sup> says that at present the system of Free Banks is in active operation in China and that it fully answers the purpose. M. COURCELLE SENEUIL *in voce* "Papier Monnaie" in the Dictionnaire de l'Economie politique, and M. BENADAKIS in his essay in the Journal des Economistes, entitled "Le Papier monnaie dans l'Antiquité"<sup>4)</sup> and even the author of the Notizie intorno all' ordinamento bancario e al corso forzato negli Stati Uniti di America, e in Russia has appended to his Allegati a little chapter entitled "La Carta Moneta presso le nazioni Asiatiche"<sup>5)</sup> All those authors show great interest in the same subject, and give a concise view of the history of paper currency in the Chinese empire. These communications lead us naturally to the sources drawn upon by them, and as the fountain-head of all we find:

1<sup>o</sup> A little information given by J. Klaproth in the first volume of the Journal Asiatique (1822) entitled "Sur l'origine du papier monnaie"<sup>6)</sup>.

2<sup>o</sup> An essay of the late sinologue ED. BIOT, followed from Chinese

1) THEORY AND PRACTICE OF BANKING  
Vol. I, p. 179. DICTIONARY OF POLITICAL ECONOMY *in voce* Banking p. 215 and *in voce* Currency p. 667—671. Mr. MACLEOD says at the end of his information on Chinese paper money: "We have given this account of Chinese paper money because we are not aware that any account of it has ever been published in English, and it may probably be new to our readers to learn that all the phenomena which have been displayed in Europe and America by the issue of paper money were exhibited in China many centuries ago".

2) Money and the Mechanism of exchange p. 198.

3) Leipzig 1854 Vol. II p. 421

4) Vol. 33. March 1874. p. 353 sqq.

5) Page 161. This book of which only the first part is printed as yet, is one of the many valuable economical and statistical works which are gradually edited by the Ministerio d'agricoltura, industria e commercio in Italy.

6) Cf. Mémoires relatifs à l'Asie par J. Klaproth 1826. Tome I p. 375.

sources, and entitled "Mémoire sur le Système monétaire des Chinois". This study has been published in 4 numbers of the Journal Asiatique, Anno 1837.

These then were the sources from which all further information on the subject was drawn, information which did not escape the rejuvenating influence of a distillation through so many brains.

What I myself read in these monographies made me the more desirous to consult authentic documents in which probably many things, which were vague and without connection would be explained when I could read the exact and chronologically arranged details which the Chinese with laudable zeal are wont to collect together on any subject they treat of.

I had the good fortune of having a copy of MA-TWAN-LIN's Examination on Currency lent to me, and moreover I had access to the treasures of the collections in the Royal Ethnographical Museum, to the Japanese Museum of the Zoological Society: NATURA ARTIS MAGISTRA at Amsterdam, and to the libraries of Prof. J. HOFFMANN and Prof. G. SCHLEGEL of Leiden, and so I set to work, still uncertain whether I should be able to produce anything not yet published by my predecessors. But the more I advanced in my study of the Chronicles, the stronger became my conviction that I was doing no superfluous work. The oldest piece, that of KLAAPROTH, proved to be nothing else but a quotation from one of those numerous Encyclopedias in which all possible and impossible subjects are separately treated of, works always highly interesting to a Chinese scholar, being compiled from the great authors, and faithfully referring to the sources from which they are borrowed.

The second source, the essay of ED. BIOT has great merits but it has the fragmentary character of a magazine article. MA-TWAN-LIN, the principal Chinese author consulted by BIOT has divided his work into two parts, 1<sup>o</sup> the historical chronicle, 2<sup>o</sup> the economical theories and opinions contained in the reports and memorials presented to the imperial government by prime ministers, governors of provinces, and other high dignitaries, or in the speeches delivered in the meetings of the privy council and the ministers of state by the sages and learned of their time. MA-TWAN-LIN, a learned statesman and author of the 13<sup>th</sup> century of our era, has collected all these chronicles and state papers, and arranged them in chronological order so that from the most ancient date down to the author's own

time we have a faithful record of all that relates to the province of learning, science, policy, etc. Of this extensive collection, however, the reports and speeches form the principal and most important part; everywhere they impart the elucidation of historical events which precede and follow; but infinitely more important they are as they give us an idea of the men who have had the greatest influence on their time. These fragments, however, require a careful study, shall they be rightly understood. Full of historical allusions comprehensible to the Chinese literati but to us, not having the necessary materials at our disposal, often unintelligible; moreover not simple and clear as the chronicle which communicates only facts, but full of distorted sentences, full of pedantic words taken in a signification which rarely occurs and which are borrowed from some classic author who perhaps in some exceptional case made use of them and lastly treating of notions which they felt to be true and tried to express, but which as yet had never been subjected to a rigorous scientific investigation.

In writing his *Mémoire sur le Système monétaire des Chinois* the French author has exclusively confined himself to the historical Chronicle; only once or twice he wanders from his subject to give a few lines of MA-TWAN-LIN himself, in which that Chinese scholar communicates his individual opinions after having treated of a whole period of Chinese history; but even then those fragments are so abridged that the speculative matter could merely be touched upon. The consequence is that many passages of the Chronicle are not sufficiently understood, and that owing to the omission of what would have given variety and relief to dreary dates and facts, the part on the history of metallic money is uncommenly dull and monotonous.

Of invaluable service, however, this worthy pioneer of Chinese science has been to me. I had but to follow the way mapped by him when he, like a second Marco Polo, for the first time undertook a journey through the immense Chinese empire and it was possible for me to cruise and wander about in every direction, where he, seeking for the way in the unknown and unexplored country was obliged to go straight forward. By the indefatigable labors of many European sinologues, HOFFMANN, JULIEN, LEGGE, and others, I had not those obstacles to overcome, which BIOT had to struggle with; in many cases the way was prepared, the direction indicated,

and so I could reach the wished for end or at any rate come nearer it than was possible for the solitary traveller in 1837.

Now it will easily be seen why I have preferred this to any other form of composition for my work. A magazine article being extant, a study collected from original sources was wanted, if it were only to enable some one or other to compose a new article for a Periodical in which the history of Chinese currency is fully discussed.

I have continually connected the history of currency with the economical opinions of the different times, such as they have come down to us in the words and writings of the great thinkers who in China have occupied themselves with this subject.

But I have pointed out not only the good and the true principles, but also the follies and mad-cap theories which promulgated by influential Chinese were of equally great importance to the history of their time. Originally it was my intention to compare the opinions and theories of Eastern Asia with those of Western Europe and America; but gradually I have been obliged to confine myself to a few remarkable points of comparison, for fear of giving to this book the very encyclopedian character peculiar to all original Chinese science. In most cases I have given a concise view of the political history which directly bears upon the passages taken from Ma-twan-lin, and which were indispensable to understand our author, at the same time availing myself of these little introductions to devote a few lines to the economical part of the social conditions.

It was likewise part of my plan to incorporate into this book a view of the Japanese metallic and paper currency. Apparently this was a wide field for observations. Among the collection of Dr. von SIEBOLD, brought from Japan and preserved in the Royal Ethnographical Museum at Leiden, there were a great number of so called mint-books, containing diagrams and descriptions of all varieties of Chinese and Japanese coins; the collection of Japanese coins in that cabinet is nearly complete, and, last not least, there are seven Japanese bank-notes, the oldest dating from the year 1688 and the latest from 1868. But what was my disappointment when, on examination, I found that the Japanese authors seem not to have had the least idea of the signification of money, their books on the subject containing, only besides other worthless trash, a dull account of the dimensions and weights of their coins.

After they had adopted the institution of money from the Chinese, the round square-holed copper pieces were but seldom used, the general measure of value remained, what it originally had been, rice. The Japanese gold and silver money had by no means an intrinsic value corresponding to the nominal, which has been proved from a report of an essayist of the Dutch Bank at Amsterdam, who at the request of Prof. HOFFMANN has estimated the value of some hundreds of gold *Kobangs*. The relative value of the different metals, as given in the Japanese Encyclopedia *San-tsai-dzu-i*<sup>1)</sup> is very primitive. "A gold coin has the value of 10 silver coins, 1 silver coin is worth 10 copper coins, and 1 copper coin has the value of a measure of rice."

Behold the childlike simplicity of a people who isolated from the rest of the world, were not interested in having an exact ratio of value of the different materials which for centuries together have circulated as medium of exchange. After the Japanese ports were opened to Europe and America, this state of things very materially altered, but not until the country was plundered by cunning speculators who imported the silver coins in wholesale to exchange them for the underrated gold. A paper money too have they had, but their notions of this representative currency seem to have been as crude as those of metallic money, and having gold and silver coins, the want of a lighter medium of exchange than copper was so little felt that this institution never reached any high degree of development. Little pieces of paste-board representing a very small value, circulated in some feudal territories, and were issued because the feudal lords or *daimios* who, not having the privilege to cast their own coins, wished to bring a currency in circulation which was a sign of their power in their own territory, and at the same time met the want of a sufficient quantity of metallic money. Of these notes there is one in the above mentioned Museum, issued in 1731 by the feudal lord of *Awa* and *Awatsi*<sup>2)</sup>; another current in the province of *Simabara*<sup>3)</sup> issued in 1776; a third of the year 1688 without mentioning the territory where it was in circulation, of a value of 5 silver *pu*, etc. In all

Under the reign of the *Sung* and *Yuen* dynasties paper money was made use of. It was uncommonly impractical. When in the rain it got soaked and the mice gnawed at it, it became unfit for use (lit. as if one possessed a raven). When carried in the breast-pocket, or the money-belt the consequence was that it was destroyed by abrasion."

This quotation will suffice to show that though the Japanese have known paper money, they have not had the least idea of its important signification.

The Japanese is by nature either a husbandman or a soldier; merchants belong to the lowest cast; they act only as intermediaries in the inland trade of the country.

When Japan was opened to the world commerce, the credulity of the government as well as of the people was the cause that designing merchants cheated them in all possible ways, till at length roused by heavy losses they were urged to study causes and effects and take measures in order to prevent further mischief.

Quite different is the character of the people in China. There nearly everyone is a merchant and trader above all things. And the reverse of what commonly happened in Japan is seen in China. A Chinese merchant will not easily let pass an opportunity to make a bargain; in his intercourse with Europeans he generally proves to be too sharp for them; in all commercial transactions he knows to get a little profit out of the *fan-kwei* (foreign devil), and to drive out the European merchant wherever he makes his appearance.

1) Vol. 39. p. 156.

With such a strong contrast of character it is not surprising that the monetary history of the Japanese has no importance whatever when compared with that of the Chinese.

In many branches of Chinese wisdom traces of economical principles are obvious. They have written on taxes and population as well as on money matters. The practical philosophy of CONFUCIUS teaches the most judicious way in which a state should be governed, and that the first duty of a prince is to make his people rich.

Once, when CONFUCIUS was passing through *Wei* in company with one of his disciples he was struck with the populousness of the State. The disciple said "Since the people are thus numerous, what more shall be done for them?" CONFUCIUS answered: "Enrich them." And when they have been enriched, what more shall be done for them?" The reply was — "Teach them."<sup>1)</sup>

We read in MENCIUS "Let it be seen to that their fields of grain and hemp are well cultivated and make the taxes on them light: — so the people may be made rich."

"The people cannot live without water and fire, yet if you knock at a man's door in the dusk of the evening, and ask for water and fire, there is no man who will not give them, such is the abundance of these things. A sage governs the empire so as to cause pulse and grain to be as abundant as water and fire. When pulse and grain are as abundant as water and fire, how shall the people be other than virtuous."<sup>2)</sup>

In MENCIUS we find another remarkable passage in which he, answering some sophists who wished to return to the primitive state of man when everyone provided for his own wants, sets forth the advantages of an equal division of labor<sup>3).</sup> It reads as follows.

MENCIUS said: "I suppose that *Heu-hing* sows grain and eats the produce. Is it not so?" "It is so," was the answer. "I suppose also he weaves cloth, and wears his own manufacture. Is it not so?" "No. *Heu* wears clothes of haircloth." "Does he wear a cap?" "He wears a cap." "What kind of cap?" "A plain cap." "Is it woven by himself?" "No. He gets it in exchange for grain." "Why does *Heu* not weave it himself?" "That would injure his husbandry." "Does *Heu* cook his food in boilers and earthen-ware pans, and does he plough with an iron share?" "Yes." "Does he

2) Vol. II p. 338—339.

make those articles himself?" "No. He gets them in exchange Page  
for grain."

MENCIUS then said: "The getting those various articles in exchange for grain, is not oppressive to the potter and the founder, and the potter and the founder in their turn, in exchanging their various articles for grain, are not oppressive to the husbandman. How should such a thing be supposed? And moreover, why does not *Hou* act the potter and founder, supplying himself with the articles which he uses solely from his own establishment? Why does he go confusedly dealing and exchanging with the handcraftsmen? Why does he not spare himself so much trouble?" Ch'ing-seang replied, "The business of the handcraftsman can by no means be carried on along with the business of husbandry."

MENCIUS resumed: "Then, is it the government of the empire which alone can be carried on along with the practice of husbandry? Great men have their proper business, and little men have their proper business. Moreover, in the case of any single individual, whatever articles he can require are ready to his hand, being produced by the various handcraftsmen: — if he must first make them for his own use, this way of doing would keep the whole empire running about upon the roads. Hence, there is the saying, 'Some labour with their minds, and some labour with their strength. Those who labour with their minds govern others; those who labour with their strength are governed by others. Those who are governed by others support them; those who govern others are supported by them.' This is a principle universally recognized."

Taking a general view of the economical part of our subject we find in the history both of the metallic and paper money principles which are perfectly true and correct. An evidence of this is the name "current merchandise", by which the Chinese already in early times expressed their notions of money. The theories of money and its signification contain many good elements, and in many cases it is clear that the Chinese were thoroughly aware that money, as a measure of value of all commodities, should have an intrinsic metallic worth corresponding to the nominal indicated by the legend, at which the coin is brought in circulation by the government.

Often do we hear the warning voice of the councilors of the crown, when they show the prince who in the most reckless manner issues bad money to meet the growing demands of his army, the dangers

been most miserable. Never have those budding ideas been able to ripen into an organic whole that could form the basis of a good system of coinage.

In the history of the metallic money we observe two important factors which continually have impeded a fuller development. 1<sup>o</sup>. the want of a sufficient quantity of precious metals. 2<sup>o</sup>. the influence of false coiners which was the consequence of the rude technical execution and the deficiency in the art of coining of the state money.

The first point needs not be further demonstrated. Our whole history furnishes evidences that gold and silver, found only in a small quantity, could not circulate as a general medium of exchange in China. Only during the reign of the Mongol dynasty (1260—1368) silver bullion circulating as money was frequently made use of<sup>1)</sup>, and generally the larger credit notes of that time were estimated in some ounces of silver. Occasionally our history mentions the use of precious metals as a medium of exchange of unlimited value, but these cases are insignificant compared to the general use made of copper and iron.

<sup>20</sup>  
<sup>28</sup>  
<sup>51</sup>  
<sup>94</sup> ac.

But owing to this use of substances which had a slight intrinsic value, the art of coining must necessarily be simple and inexpensive, as in the opposite case the cost of production of each coin would soon have exceeded the intrinsic metallic worth, which likewise would have resulted in a depreciation in the market-value of the coin.

The art of coining being so bad through all ages, it was natural that especially when the government began to adulterate the money, false coiners sprung up in great numbers and cast money in wholesale by the same simple process as the State. The Chinese have never understood the art of striking money, but every little piece was cast in a mould made in fine sand, so that every person was able to cast as much money as he wanted. Matters were worst under the reign of the *T'ang*-dynasty; then everywhere the money was counterfeited; no longer in secret places, but before the very eyes of the state officials, on rafts and in vessels in the middle of the river, this illegal but profitable occupation was exer-

<sup>104</sup>  
<sup>qqq.</sup>

1) 銀錠一兩當錢一  
貫. "One tael of silver bullion is equal

in value to a string of a thousand cash." we read in *Wang-k'i's Continuation of Ma-  
nun-hua*.

cised. Countless measures were taken to prevent the evil, twice even we read in history that the emperor granted the people the privilege to cast money for themselves. This measure was strenuously opposed and defended in several speeches which contain a wealth of remarkable economical opinions. But the results were even more fatal in the end than the wisest statesman could have foreseen and the government was soon obliged to retract the privilege.

The only effectual means of checking false coining, the Chinese, with all their fine speeches and beautiful theories, have never been able to find, viz. to render the mechanical execution of the coin so perfect as to make forgery impossible, a result they could have obtained, if they had understood the art of striking money instead of casting it.

And now involuntarily arises the question: How is it possible that the Chinese have not gradually improved in their art of coining, and that necessity has not taught them to devise that mode arrived at by all other peoples who have attained a certain degree of civilization. That question too I will attempt to answer, but before doing so, I wish briefly to consider the economical significance and importance of the history of the paper money, as this will lead us to the very same conclusions as are to be drawn from the history of the metallic currency.

I will not treat of the ephemeral apparition of the deer-skin parcels, the representative medium of exchange introduced by *Han-Wu-ti*. Though mentioned by European authors as the first appearance of paper money in the world, it was nothing but a cunning trick of a sly prince, purposing to tax the well-lined purses of his state-dignitaries, nothing but a shameless extortion, corroborated by the fact that a minister, looking through his Majesty's shrewd designs, was put to death because he was bold enough to speak his mind and object to such measures.

No more will I speak of the short apparition of a real paper currency under the *T'ang*-dynasty. It is indeed a remarkable event in the monetary history, but it makes no more impression than a dissolving view; we do not know whence it came or where it went, it is like a dream which after horrible phantoms appears as a pleasing calm, but which likewise disappears without leaving any trace of its existence, and of which afterwards the dim outlines are hardly to be recalled.

But I will treat of the system as it shows itself under the *Sung*-dynasty, how it has developed itself without leading principle and

without any system, and how after an existence of about 300 years, it has at last been made away with, having entailed nameless misery on prince and people.

A few words I may however be allowed to advance as to the reason why the history of the paper money has been treated in a way somewhat different from the other parts of this book.

The reader will observe that the Chinese text in the last chapter is more bulky than in the chapters which treat of metallic money, and that, besides the general introduction with which the chapter begins, the passages, printed in large type, principally serve to give some explanations of the contents of the fragment which follows. My reasons for this deviation are these that the quoted passages all date from one time, and the measures recorded, generally taking their origin in the same causes, these fragments of Ma-twan-lin's chronicle are better connected than those of an earlier date which contain incoherent information often of distant periods and different times.

But on the other hand I have given in this part all that could be given; the history of the institution itself was remarkable everywhere and the records comparatively so few that after having tried to explain them all, I could not help giving the whole without the least deduction. Only the order in which the fragments follow have I changed to establish a better connection between the different parts of the subject than is found in Ma-twan-lin's work.

As everywhere else in the world, the paper money had its origin in the want felt by the people to have a medium of exchange <sup>167</sup> in which payment could be made without the trouble of transferring specie from hand to hand. Especially in the west of China where in those times the heavy iron money circulated, such a substitute for the common medium of exchange was of inestimable convenience to trade. Soon the system developed itself, as seen from the little but striking passage, where the invention is told. That institution invented by one T's'ang-yung<sup>1</sup>) was during the first period of its existence, however, entirely in the hands of private persons. The use of the money bills probably originated in the receipts for government products issued by the state to pay the purchases made for the army. <sup>170-171</sup>

1, 謝 許 As we read in Wang-k'i's Continuation of Ma-twan-lin. Vol. XVIII p. 96.

Page 167 It is of little importance how far the insolvency of those private banks necessitated the state to interfere. No doubt, the government had immediately seen what large profits were to be gained, if it obtained the monopoly of the issue of notes, and so we soon see all private banks abolished, and on the very spot where the institution had taken its origin, the government continued to issue "the convenient money."

172, 173 Soon afterwards the new money became legal tender throughout the realm; it so readily accepted by the people who had so much confidence in it, that when the 22<sup>nd</sup> triennial term of redemption of the notes of the first series, issued for the time of 65 years, and convertible at the government bank every three years, had come, only a small number was presented for payment.

Now we already meet with a conversion of the old bills by new obligations. At the 23<sup>rd</sup> term, when the whole series fell due, notes for more than 1.250.000 string of copper money were still in circulation. To redeem these old obligations new bills were issued to that same amount, for a period of 25 terms of redemption, and since that time there circulated notes of two different echeances. Once struck into that dangerous path they continued their way, more bills were issued, and at last, we are told that in 1107, when the 174 war with the Tartars called for great sacrifices, the necessity of the state was met by a vast supply of paper money so that there circulated an amount of twenty times as much as 100 years ago when the first bills were issued.

Eager as they had been before to keep the notes in their possession, they were now anxious to redeem them, but though presenting them at the fixed interval no specie payment was obtained. The holders of these already considerably depreciated bills of exchange received instead of money a new sort of notes called credit notes. These bills were emitted for a period of 43 years, convertible every year, and were exchanged at the ratio of 1 new bill for 4 of the old. In order to keep the depreciated paper money in circulation the same measures were adopted as in France when the paper money of JOHN LAW was only to be maintained in circulation by force. All payments must be made for a part in paper. In that case it was thought that it would be difficult to ascertain the decrease of value, for "when it was ordered by law that what in the future would be stipulated for in iron and copper money,

should be paid partly in bills, these would have a <sup>Prec</sup> <sub>175</sub> value corresponding to that of metallic money".

The result of this absurd measure was not doubtful. The bills were soon reduced to  $\frac{1}{10}$  of their legal value. Influential officials warned the government not to destroy public credit by over-issuing the paper currency any more; they advised that the government should set the example to accept the bills at their legal value at <sup>176</sup> the government offices, in that case all payments might be made in bills exclusively, or on payments in money a premium of from 10 to 20 per cent might be levied.

But this measure proved as ineffectual as others, and notes of a nominal worth of 1000 *cash* were at last reduced to a real value of no more than 10 *cash*.

Such is the history of the paper money current in the capital and the whole eastern part of the empire, except in some of the provinces of the south east, where the use of paper money was to be <sup>177</sup> introduced some time afterwards. But even worse was the condition to become in the western and north-western parts, where the armies were encamped and the fortifications were built to secure China against their warlike neighbors, the Tartars. Our author takes us back again to the district of Šo in the province of Sso-tš'uen, <sup>181</sup> where the paper money had taken its origin. He tells us how gradually the metallic deposit had been seized upon to meet the increasing expenses, and how all payments in behalf of the army were made in paper.

Some fragments give us information as to the enormous quantities which were emitted in a short time.

The first issue of paper money in those parts (in 970) was to an amount of one million string, in the year 1204 the number of <sup>183</sup> credit notes of Sso-tš'uen alone exceeded the sum of 53 million string. Many schemes for paying off part of the debt, conversions of debt by issuing new notes estimated in silver, were devised, but they were all leavened with fraud; repayment was promised and when <sup>184</sup> the credulity of the people had caused the notes to rise, other supplies were issued, payment was deferred and the people proved to be cheated. When they came to present the notes which according to the proclamations should be paid back. And the end of the history of the bills in Sso-tš'uen is described as follows: "In the year 1210 <sup>185</sup>

Page 186 when the old bills had been twice withdrawn from circulation, the value of the new notes was at last equal to the old ones.

Another chapter treats of the history of the government bonds or frontier bills with which the purchases made for the army, encamped in those western parts, were paid and the outlay on the border fortifications was covered. A curious circumstance it is, that, when it was ordered that in the same place there should be established a bank for the issue of another sort of notes, to suit the convenience of the daily expenses of the soldiers and the retail trade in the camps, a protest was made by the ministry because the metallic deposit was wanting. In consequence of this protest the bank was immediately abolished again.

Here too the ever increasing want led to an overissue of paper money; those notes gradually made their way into the eastern provinces where it was first ordered that they ought to circulate as legal tender, and afterwards they were even printed and emitted there, when in consequence of the hopeless war with the Tartars the Chinese court was obliged to retreat to the south. How little confidence the government itself put in the paper money is told where we read that "in order not to have to look up entirely to the paper bonds to meet the wants of the empire, there were issued again receipts, for government productions which represented a value of 10.000.000 string annually. Moreover the government itself begins to disown the notes by ordering that all taxes should be paid in ready money; continually conversions are effected and redemptions deferred, with the promise that at ensuing terms of echeance the loss will be regained, but the consequence was that the notes continued to fall, an ruin and misery spread throughout the country."

Ma-twan-lin gives a separate chapter regarding the history of paper money in the eastern provinces, which was instituted to circulate in certain districts exclusively. Its history is the same, and here too in consequence of over-issue "the character of the paper money, the balancing an actual possession of money, lost its effect." The ultimate result was that thousands were impoverished and totally ruined and such a cry of despair rose in the country as never afterwards was heard either in France after the failure of the Mississippi scheme or in Austria in 1810. "After having tried during years and months to support and maintain these notes, the people had no

longer any confidence in them, but were positively afraid of them. For the payment for government purchases was made in paper, the fund of the salt manufactories consisted of paper, the salaries of all the officials were paid in paper, the soldiers received their pay in paper. Of the provinces and districts, already in arrear, there was not one that did not discharge its debts in paper. The copper money which was seldom seen was considered a treasure. The capital collected together in former days to supply the border fortifications was quite exhausted, and was a thing not even spoken of any more. So it was natural that the prices of commodities rose while the value of the paper money fell more and more. Among the people this caused them, already disheartened, to lose all energy, the soldiers were continually anxious that they did not get enough to eat, and the inferior officials in all parts of the empire raised complaints that they had not even enough to procure the common necessaries. All this was a result of the depreciation of the paper money."

The paper money had ruined the state and caused the decline of a dynasty that for more than three centuries had occupied the throne, and never after that time the bills issued by the state have been able to recover from their deep fall.

In following out the history of the paper currency we find, as in that of the metallic money, a great many good principles and notions which, if they had been extracted from that chaos of injustice, united into a system, and accepted as *norma agendi*, might have had the most beneficial results.

In the beginning the payment of the notes was guaranteed by a metallic deposit to an amount of about three-sevenths of the outstanding notes; intervals of redemption were fixed, and a limit was set to the issue. Constantly the ministers and the councilors warn the government that paper money which is worthless of itself, must be backed by a fund for which it may be exchanged, shall the people keep confidence in it, and circulate it as money from hand to hand. *Tung-lai* and *Ma-twan-lin* have both very plainly said that paper is not money; they have pointed to its representative character, and maintained that it is nothing but a means of transmitting specie.

*Ma-twan-lin* writes:

"With the very first intention to institute paper-bonds, it was not

Page  
207

208

214

215

213 . . . . "And so much the more now that by means of a bit of paper of the size of one foot, a quantity of many pounds of copper could be substituted, now that by circulating the lighter the heavier was actually employed, and the strength of one man was sufficient to make that a quantity of tens of thousands of strings at a fixed time arrived at places some thousands of miles distant, what necessity was there that every part of the empire should have a paper money of its own, in consequence of which the people at last did not know any-more which to trust."

But not only in the time of its greatest decay do we find such correct notions of the paper money. Already in the definitions and names by which they tried to express their first apprehensions of the representative character of paper money, we see the right principle at the bottom of their thoughts on the subject. "The stretching of money" and "a bill balancing an actual possession of money or merchandise" were the long but well chosen names which contained their first notions and soon became the current expressions for paper money.

Scattered here and there we find various principles which, if — as in later time in Western Europe — a law of banking had been made, would have been introduced into the system. So we find regulations as to the convertibility of old, damaged, or torn bills into new ones, and as to what part of the old bills must be presented and be still legible in order to be exchanged for a new one at the payment of a little premium. Then follows some information about the way in which the bills were coined, the designs and the marks impressed on them, the paper of which they were made, the details of the art of execution; all these particulars showing the gradual development of the institution, but at the same time the total absence of anything that might be called a system. Furthermore there are the penalties remarkable for their resemblance to those which were instituted at the first appearance of forged paper money in Europe and America. On the bill of the Great *Ming*-dynasty we read: “Whoever fabricates or uses forged bills shall be beheaded, and he who informs against the forger or arrests him shall receive a reward of 250 ounces of silver.”

On the *assignats de la République française* we read something similar: "*La loi punit de mort le contrefauteur, la nation récompense le dénonciateur,*" and the American notes issued during the War of Independence bear the short phrase "To counterfeit is death."

Perusing the fragments quoted, more regulations and decrees will be found, which might have completed the system if the Chinese had been able to compose it.

But all these good elements and these right economical principles remained disjointed, and were only so many luminous points in the pitchy dark through which they groped their way to hit upon the exact mean, as Chinese philosophers love to call it. By their own stupidity as well as by irresistible causes from without they deviated more and more from those principles which should have led to a solution of the difficulties, and got involved in greater misery and wretchedness than the Western world has even experienced.

And now the question arises again: what has been the cause that the Chinese civilization, so much older than that of any other people in the world, containing so many good elements, has never attained to a higher stage of development, but has remained stationary in all respects in the same way as we have observed it in the history of their currency.

The question is a very debatable one, and it is almost impossible to point out a general cause of the fact. Some have tried to explain it by asserting that the inhabitants of North-eastern Asia, belonging to an inferior race of men, never can attain to the highest stage of mental development. This assertion is in some degree corroborated by the history of the east Asiatic nations, their exertions in science and art, which all show a remarkable inertness of thought.

It has, however, also been contested, among others by my worthy friend Mr. L. SERRURIER<sup>1)</sup> who in his studies of Japanese language, political and social history, has met with the same phenomenon, and who holds that the explanation must be found in the circumstance that the soil and climate have not necessitated these nations continually to devise means of defending their lives, of making their country inhabitable, and of protecting themselves against all the dangers which those tribes have had to overcome, who coming from the Western and Southern parts of Asia have peopled Europe. Such

1) The author of a very interesting little work "Something on Japan." (Een en ander over Japan) and editor of a part of the *Kanira-yaki*.

**Page** a struggle for existence sharpens the intellect, and is the parent of that Science which never resting at last makes Nature her servant. There is some degree of truth in this opinion, especially when we consider the splended conquests of Science in the European society in every branch of human knowledge, results which lead us to believe that the human intellect is boundless in its range.

But I have two serious objections to that assertion. Firstly that in ancient times countries which were even more blessed than Eastern Asia, viz. Greece and Italy, even in consequence of the benefits of soil and climate have attained to a development which in many respects is unequaled by the modern development born from struggle and privation. What an admirably developed system of laws did the Romans possess; a system which served for ages as *norma agendi* and for the greater part continues to serve as such even in the present times. So the ancient Greek are still the unmatched statuaries, and of both peoples writings have come down to us which show the high degree of development of their languages and conceptions; and wherever in modern times in science or art the highest point of perfection is aimed at, those relics of ancient Greece and Rome are still the models generally looked up to.

If we draw a comparison between the progress made in art, law and language by these peoples and that in China, we are inclined to grant that a lack of natural capacity must have been the obstacle which has prevented them from reaching the same height under nearly similar circumstances.

My second objection may seem to be weightier yet. The Chinese were by no means exempt from such labor and hardships as were overcome by other peoples by energy and strength of intellect, but Nature seems not to have bestowed upon them an equal share of mental endowments. Some striking instances may be quoted to prove this. The Chinese author *Kwan tsze* who lived 625 years before Christ writes: "When from east, west, north and south, all over a surface of from 7 to 8000 miles all intercourse with these parts was cut off by the flood, and in consequence of the difficulties to reach those regions neither ship nor cart could penetrate thither, the people relied on the following sorts of currency." To this passage may be subjoined the following paragraph from the North China Herald, Shang-hai, Januay 4<sup>th</sup> 1877.

"In Central China the provinces have been suffering famine fol-

lowing upon a drought, which caused the failure of the crops and consequent impoverishment and scarcity. Some measures of relief are being taken, but the want of good roads makes the carriage of rice to the distressed districts difficult, and it is to be regretted the Chinese government does not require the people to earn food by developing the means of communication."

So during a period of more than 25 centuries we see no progress in the art of constructing roads and of protecting the fields from inundation.

What a strong contrast China in this prospect presents to Holland. To render their country habitable the Dutch had to put out all their strength and engage for generations in stubborn conflict with the angry elements. Untiring industry and energy chained the Ocean and made the country, disinherited by nature, not only fit to dwell in, but rich and powerful. The comparison affords another striking instance of the difference between an all conquering power of the ever progressing development of the human mind in the one country, and a perfect inertness of intellect and subinission to the power of nature in the other.

We have had occasion to show what misery was produced in China by a bad currency, and how they have never been able to find the right means to baffle false coiners. And this must be said of a people of merchants, while the Romans who felt much less inclined to trade have directly invented the art of striking money. as may be seen from the excellent fragment of the writings of the civilian PAULUS, lex 1 pr. *De Contrahenda emptione* (Dig. Lib. XVIII, 1) <sup>1)</sup> while we read in the *Lex Cornelia de falsis* (Dig. Lib. XLVIII, 10, lex 9 pr.) <sup>2)</sup> that the false coiners at Rome cast their money so, that the better mechanical process of the government money made it easy there to distinguish between true and false coin.

That lack of natural capacity of the Chinese people we observe in all their intellectual proceedings, in the way in which they cultivated science, in their art and in their political institutions.

1) *Origo emendi vendendique a permutationibus coepit; olim non ita erat numerus, neque aliud merx, aliud pretium vocabatur, sed unusquisque secundum necessitatem rerum utilibus iuutilia permutabat; sed quia non semper nec facile concurrebat, ut, quem tu haberes, quod ego desiderarem, invicem haberem, quod tu accipere vellen, electa materia est cuius publica ac perpetua*

*aestimatio difficultibus permutationum arqualitate quantitatis subveniret; eaque materia FORMA PUBLICA PERCUSSA usum dominiumque non tam ex substantia praebet, quam ex quantitate.*

2) *Lege Cornelia cavetur, cum qui argenteos nummos adulterinos PLAVEANT falso crimine teneri.*

With some few exceptions, that which has originated in the minds of the Chinese can hardly be called science. Nowhere we find a system, but everywhere a mixture of elements, good and bad, an enormous encyclopedia, but without any logical succession of ideas, no basis laid by one generation to build on for the next, not even the capacity to connect and unite the scattered materials and work them to a whole. On the contrary every attempt to strive forward in science shows little or no progress and generally is confined to endless collations, compilations and commentaries, generally devoid of anything that may be called system.

A favorable exception to this form the writings of the ancient philosophers which are founded on a true and practical basis, containing the principles on which men will live happy on earth, and how to attain this end, how the prince must govern his people and the people must serve their prince, how the social relations both in the family and in the state must be arranged in order to come as near this object as possible. Here we find a logically developed system which has been a true gospel at its origin and has continued to exist as such but likewise without having been developed fuller notwithstanding it chiefly deals with the material interests of life.

As to the department of speculative philosophy, what has been produced after that time is so obscure and vague that one feels almost inclined to ask whether the learned philosophers themselves were able to account for the speculative theories they wrote down as genuine wisdom.

In art as in science we find the general and characteristic fault of attending too much to the details but too little to the whole, and besides, that stubborn adherence to customs, traditions, fixed rules and processes which developed Chinese art to a true talent only as to the details. Let us take, for instance, the Chinese art of painting; the outlines of a picture are boldly drawn but perspective is wanting; the details are executed to perfection but a leading thought is not to be found, and this is again the consequence of the following the old beaten track; every part being done according to certain rules. To improve upon these rules, to catch the spirit and not to cling to the letter is a thing a Chinese painter never thinks of.

A remarkable instance of this I have seen in a number of portraits of Chinese nobles who were evidently taken after life. The

painter had produced a striking resemblance of the head and attitude of his model, and in this part of his work he had unconsciously followed the laws of perspective, while the state robes interwoven with gold and flowers and the variegated carpet are executed as minutely in the background as in the part of the picture which lies nearest to the painter's eye. And the reason why he in one part had unconsciously obeyed the laws which the plane surface imposes on him, and he neglected them in the other, is simply because there is no unity of thought; in floor and carpet he neglects the laws of perspective only because he knows the receipt to draw a floor or a carpet. He does not observe this want of unity in the whole, and very probable it would not be possible to convince him of his unprincipledness, for he has worked according to rule, and rule in his principle.

Finally we find the same absence of unity in the political administration of the Chinese. The ancient constitution of the *Ts'eu*-dynasty was founded upon the principle of centralization. Whole legions of civil functionaries were spread over the empire and were responsible for their actions to the central government established in the capital; a thing of itself already impracticable. Such a system, however, may have answered well in the beginning when the empire was not extensive, but already under the *Han*-dynasty a centralization of the power of the government must needs cause a total disorganization and the greatest frittering of power.

The Chinese empire was too extensive to become powerful when governed in such a way. Petty princes and influential officials representing the central government in remote districts could with impunity commit the greatest extortions and injustice. Their despotism generally made it necessary for them to assume a hostile attitude against the central government and to be on friendly terms with their homogeneous neighbors in case the emperor minding to punish them, made war upon them. Hence no prince, however prosperous his reign may have been, but has had to fight rebels. And was that system of centralization a source of continuous confusion and warfare at times when the reins of the government were in the hand of a well-meaning powerful prince, worse evils arose when a tyrant was seated on the throne, and abused the imperial dignity to satisfy his passions and desires. Every feudal prince, every magistrate becomes lord and master of his own territory, calls himself prince, king, emperor, or whatever sublime title his imagination suggests, and whole periods occur

in Chinese history in which several dynasties, several emperors simultaneously sway the scepter in the most distant parts of the empire.

This state of affairs generally lasts till some warrior or statesman has spirit and energy enough to consolidate the lacerated empire, then he is proclaimed Emperor and becomes the founder of a new dynasty. The internal broils are quelled, and the external enemies driven back to their dominions.

A new period of prosperity has dawned owing to the peace which now prevails and the incomparable fertility of the land situated between the *Kiang* and the *Ho*, there is abundance of food: "the teeth grow and the population increases" <sup>1)</sup>).

At the accession of such a new dynasty we always read of reforms also in the monetary system, but hardly have some generations passed by when it is the old history again. A despot or tyrant either disregarding the warnings of wellmeaning ministers or urged by evil councilors sets the example of making bad money. Confusion, want and distress are the fatal consequences.

Provisions rise in price, trade is paralyzed, weeds cover the fertile fields, false coiners spring up like clouds, the officials appointed by such a government, commonly rascals themselves, extort the people; the posterity of those who were born in affluence die miserably from want and the bodies of tens of thousands, not killed by the sword of the enemy but starved with hunger, cover all the roads of the empire.

Four times in consequence of this absence of unity the Chinese empire has fallen a prey to its savage enemies the Huus, Tartars and Mongols, who in large numbers and with irresistible fury came in from the Western and Northern plains of Asia. Their chiefs ascended the sublime throne of the "Son of heaven," did all they could to ruin the people and after a short career shared the same fate as their Chinese predecessors.

In this way occurs everywhere the same phenomenon so clearly seen in the monetary history; the want of a progressive development and of an organizing talent which were to unite into a whole, into a system the good elements scattered here and there, and this notwithstanding the Chinese people lived in circumstances which made it necessary

<sup>1)</sup> 重熙累盛生齒繁 | 稱 is the phrase by which the Chinese author expresses that Malthusian theory.

for them to exert all their strength of intellect to accomplish radical improvements. Involuntarily we are induced to ascribe such a leading characteristic to a lack of natural capacity which allows no development beyond certain limits. I may be allowed to communicate a remarkable concordance of this supposition derived from the state of social development, with the results of another branch of science, viz. the examination of the formation of the Chinese skull.

The Chinese skull frequently shows, firstly a particular deviation in the formation of the temporal bone, called by Prof. VIRCHOW<sup>1)</sup> *Processus frontalis* (Stirnfortsatz der Schläfenschuppe), and secondly a noticeable narrowness of the temporal region (*Stenokrotaphie*); two phenomena which are generally observed in the skulls of inferior races.

In the Anatomical Museum of the Leiden University is a collection of 67 Chinese skulls, 5 of which have the deviation (*Processus frontalis*) and 20 of which show more or less the other phenomenon, the narrowness of the temporal region (*Stenokrotaphie*).

Professor VIRCHOW, p. 59 of the work quoted, writes "Ich komme somit zu dem Schlussergebniss, dass der Stirnfortsatz der Schläfenschuppe allerdings eine Theromorphie (Thierähnlichkeit) und zwar vorzugsweise eine Pithekoide (Affenartige) ist. Die noch nicht nachgewiesene aber sicher zu vermutende defecte Bildung der temporalen Hirntheilen lässt es gerechtfertigt erscheinen, in dem Stirnfortsatz und in der Stenokrotaphie überhaupt ein Merkmal niederer, jedoch keineswegs niedriger Rasse zu sehen."

The reports of mediaeval travellers in Tartary and China, which first made known in Europe the wondrous use of pieces of paper as money, all date from the time when the paper money in China had already had its flourishing time.

1) SE RUDOLF VIRCHOW, Ueber einige Merkmale Niederer Menschenrasse am Schädel. Berlin 1875.

2) I got this information from my friend and fellow student Mr. P. DE KONING who having examined the aforesaid collection of Chinese Skulls, is about to publish a dissertation on the subject entitled "Description of Chinese Skulls" (Beschrijving van Chineesche schedels. Leiden v. d. Hoek 1877.)

The number of 67 Shulls which were at his disposal is perhaps too small to draw

a general conclusion regarding the Chinese race, but remarkable it is that both phenomena are found in such a high degree (*Processus frontalis* at 8% and *Stenokrotaphie* at 30% of the whole number, whereas other examinations of skulls s. i. of Russians and other European races made on large scale showed only a proportion of about 15%). GRUNGR found the *Processus frontalis* on 60 of 4000 Russian Skulls. CALORI on 12 of 1074 Italian Skulls. Cf. VIRCHOW cit. p. 10.

The earliest communication is of a monk, GUILLAUME DE RUBROUCK (*Rubruquis*) who in the year 1252 was sent by Saint Louis, king of France, to the court of the Mongol prince MANGU-KHAN. His report on the paper money is very insignificant: “*La monnaie de Cathay est faite de coton grande comme la main et sur laquelle ils impriment certains lignes et marques faites comme le sceau du Cham*”<sup>1).</sup>

Much more interesting is the information given by MARCO POLO, the Venetian, who about 1275—84 resided at the court of KUBLAI-KHAN<sup>2)</sup>. Inhabitant of the greatest commercial town in the world, an institution like that of paper money struck him with admiration which is evident from this glowing account<sup>3)</sup>.

It is found in the second book of his travels:

#### CHAPTER XXIV.

##### HOW THE GREAT KAAN CAUSETH THE BARK OF TREES MADE INTO SOMETHING LIKE PAPER, TO PASS FOR MONEY OVER ALL HIS COUNTRY.

Now that I have told you in detail of the splendour of this City of the Emperor's, I shall proceed to tell you of the Mint which he hath in the same city, in the which he hath his money coined and struck, as I shall relate to you. And in doing so I shall make manifest to you how it is that the Great Lord may well be able to accomplish even much more than I have told you, or am going to tell you, in this Book. For, tell it how I might, you never would be satisfied that I was keeping within truth and reason!

The Emperor's Mint then is in this same City of Cambaluc, and the way it is wrought is such that you might say he hath the Secret of Alchemy in perfection, and you would be right! For he makes his money after this fashion.

He makes them take of the bark of a certain tree, in fact of the Mulberry Tree, the leaves of which are the food of the silkworms,—these trees being so numerous that whole districts are full of them. What they take is a certain fine white bast or skin which lies between the wood of the tree and the thick outer bark, and this they make into something resembling sheets of paper, but black<sup>4)</sup>. When these sheets have been prepared they are cut up into pieces of different sizes. The smallest of these

1) Cf. Recueil de divers voyages curieux par P. BERGERON. Voyage de RUBRUQUIS en Tartarie p. 91. Leide 1729.

2) He is known as the emperor 世宗 *Si-tsung* in the Chinese history.

3) The text is quoted from the splendid Edition of MARCO POLO's Book by Col. HENRY YULE, Vol. I p. 378—380. The

account is so interesting when compared with the Chinese sources, which have been translated in the sixth Chapter that I have given it in full. In different other passages of M. P.'s Journal the use of paper money with the tribes he visited and who were governed by the great Khan is mentioned.

4) See the photograph to the Addenda.

sizes is worth a half tornesel; the next, a little larger, one tornesel; one, a little larger still, is worth half a silver groat of Venice; another a whole groat; others yet two groats, five groats, and ten groats. There is also a kind worth one Bezant of gold, and others of three Bezants, and so up to ten. All these pieces of paper are issued with as much solemnity and authority as if they were of pure gold or silver; and on every piece a variety of officials, whose duty it is, have to write their names, and to put their seals. And when all is prepared duly, the chief officer deputed by the Kaan smears the Seal entrusted to him with vermillion, and impresses it on the paper, so that the form of the Seal remains stamped upon it in red; the Money is then authentic. Any one forging it would be punished with death]. And the Kaan causes every year to be made such a vast quantity of this money, which costs him nothing, that it must equal in amount all the treasure in the world.

With these pieces of paper, made as I have described, he causes all payments on his own account to be made; and he makes them to pass current universally over all his kingdoms and provinces and territories, and whithersoever his power and sovereignty extends. And nobody, however important he may think himself, dares to refuse them on pain of death. And indeed everybody takes them readily, for wheresoever a person may go throughout the Great Kaan's dominions he shall find these pieces of paper current, and shall be able to transact all sales and purchases of goods by means of them just as well as if they were coins of pure gold. And all the while they are so light that ten bezants' worth does not weigh one golden bezant.

Furthermore all merchants arriving from India or other countries, and bringing with them gold or silver or gems and pearls, are prohibited from selling to any one but the Emperor. He has twelve experts chosen for this business, men of shrewdness and experience in such affairs; these appraise the articles, and the Emperor then pays a liberal price for them in those pieces of paper. The merchants accept his price readily, for in the first place they would not get so good an one from anybody else, and secondly they are paid without any delay. And with this papermoney they can buy what they like anywhere over the Empire, whilst it is also vastly lighter to carry about on their journeys. And it is a truth that the merchants will several times in the year bring wares to the amount of 400,000 bezants, and the Grand Sire pays for all in that paper. So he buys such a quantity of those precious things every year that his treasure is endless, whilst all the time the money he pays away costs him nothing at all. Moreover several times in the year proclamation is made through the city that any one who may have gold or silver or gems or pearls, by taking them to the Mint shall get a handsome price for them. And the owners are glad to do this, because they would find no other purchaser give so large a price. Thus the quantity they bring in is marvellous, though those who do not choose to do so may let it alone. Still, in this way, nearly all the valuables in the country come into the Kaan's possession.

When any of those pieces of paper are spoilt — not that they are so very flimsy neither — the owner carries them to the Mint, and by paying 3 per cent. on the value he gets new pieces in exchange. And if any Baron, or any one else soever, hath need of gold or silver or gems or pearls, in order to make plate, or girdles or the like, he goes to the Mint and buys as much as he list, paying in this papermoney.

Now you have heard the ways and means whereby the Great Kaan may have, and in fact *has*, more treasure than all the Kings in the World; and you know all about it and the reason why.

*Marco Polo's* information has already frequently been mentioned in connection with the Chinese historians of the Mongol dynasty, and after the detailed account of the issue of paper money under the reign of *Kublai-khan* given by PAUTHIER in his edition of *Marco Polo*, the Chinese text may justly be looked upon as a superfluous appendix. Yet was it not useless to compare these reports with that part of the history of paper money in *Wang-k'i's* Continuation of *Ma-twan-lin* which bears upon the time of *Marco Polo's* residence at the Chinese Court. The perusal of this passage has lent greater force to my conviction that the important history of the paper money after the great bankruptcy caused by it under the *Sung*-dynasty was already past and gone by in China. Our Venetian was too much in admiration of this remarkable institution to see the dark side of the picture. The Khan actually "made such a vast quantity of this money which cost him nothing that it equaled in amount all the treasures of the world". Moreover we read in the Chinese Chronicle that it was made to the smallest amount and that there circulated bills for 1 and 2 *cash*<sup>1</sup>). An imperial decree issued in the 3<sup>rd</sup> month of the period *Tsung-t'ung* (1281) ordered that the premium on the conversion of old *Hoei-tsze* into new ones should be raised from 2% to 3% to indemnify the state for the cost of printing and ink<sup>2</sup>). Here too were depreciation and conversions of all kinds the natural consequences of over-issue which terminated in a great state-bankruptcy at the close of the Mongol dynasty.

Subsequent travellers in Tartary and China have also made mention of paper money. *Frater ODERIC DE FRIOUL* (1318) seems to allude to paper money when he relates the way in which taxes are paid to the great Khan.

1) We read of bills called **厘鈔** worth  $\frac{1}{1000}$  of an ounce of silver = 1 copper cash.

2) Marco Polo's statement perfectly accords with this decree. *Wang-k'i XVIII 3a—b* (工墨賈).

The people of this country say, that they have one duetie inioyned unto them by their lord, for every fire payeth one *Balis* in regard of tribute and a *Balis* is five papers or pieces of silke, which are worth one floren and an halse of our coine, Tenne or twelve households are accompted for one fire<sup>1)</sup>).

In 1322 Sir JOHN MANDEVILLE, the physician was in Tartary and his story which is inserted in all books treating of the history of Banking, reads as follows<sup>2)</sup>.

"This Emperour may dispenden als moche as he wile, withouten estymacioun. For he despenderethe not, ne makethe no money, but of Lether emprented, or of Papyre. And of that money, is som of gretter prye, and som of lasse prys, afstre the dyversitee of his Statutes. And whan that Money hathe ronne so longe that it begynneth to waste, than men beren it to the Emperoure's Tresorye; and than thei taken newe money for the olde. And that Money gothe thorghe out alle the contree, and thorghe out alle his Provynces. For there and beyonde hem, thei make no Money nouther of Gold nor of Sylver. And therefore he may despende ylow, and outrageously."

The last information is of JEAN DE CORE, bishop of SULTANYEH<sup>3)</sup>.

Le grant Kaan fait monnoie de pappier là où il a une enseigne rouge droit ou millieu, et tout environ sont lettres noires. Et est celle monnoie

1) The passage is quoted from the Second Volume of the Principal Navigations, Voyages, etc., by RICHARD HAKLUYT. London 1599. page 60.

2) Remarkable it is indeed that neither from the account of any medieval author nor from the informations of the modern economists anything is known of the use of paper money in a great commercial town of Europe, at the same time that in China under the reign of the Sung-dynasty papermoney was invented. MACLEOD writes in his Dictionnairy of Political Economy in voce *Currency*. "The first paper money that we are aware of in Europe was that issued by the city of Milau in the 13<sup>th</sup> century."

But in an Arabian manuscript recently found in Spain, and treating of the Slavonic race we read that about the year 960 of our era, shred money circulated in the city of Prague. This manuscript is preparing for publication at St. Petersburg under the title of AL-BERKI's "Nachrichten über die Slaven und deren Nachbarn". Prof. M. J. DE COORDE who is possessed of a proof-print of this work, has kindly allowed me to borrow the following fragment from it (p. 29), which is interesting to our subject. The Arabian author got his information from

a Jew who stayed for some time at the court of Otto I.

"Ibrahim ben Jakub der Israelite sagt: . . . Die Stadt Fraga ist aus Steinen und Kalk gebaut. Sie ist die reichste der Städte an Handel . . . Ihr Land ist das beste der Länder des Nordens, und das reichste an Lebensmitteln: der Weizen wird bei ihnen verkauft um einen Knschär, so viel als ein Mann braucht für einen Monat; Gerste wird verkauft um einen Knschär Futter eines Pferdes für 40 Tage, und 10 Hühner werden bei ihnen verkauft um einen Knschär. Und es werden im Land Bwj'ma (Bohemen) leichte kleine Tücher gemacht von sehr feinem netzförmigen Gewebe, welche zu nichts gut sind. Der Preis derselben ist bei ihnen jederzeit 10 Tücher für einen Knschär. Mit ihnen handeln und verkehren sie untereinander. Sie besitzen davon (ganze) Gefäße und sie (die Tücher) gelten bei ihnen für Reichtum und für die werthvollsten Gegenstände. Mit ihnen wird eingehandelt Hirse, Mehl, Pferde, Gold, Silber und alle Dinge."

3) L'Extreme Orient au Moyen-âge par LOUIS DE BACKER. Paris 1877. p. 341—42

de greigneur ou mendre pris selonc la enseigne qui y est. L'une vault une maille, l'autre un denier, et ainsi plus ou mains. Et ilz avaluent leur monnoie d'or et d'argent à leur monnoie de pappier.

Ly emperères dessusdis a tresgrans que c'est merveilles et est pour celle monnoie de pappier. Et quant celle monnoie de pappier est trop vielle et dégastée, sy que on ne la puet bonnement manier, on l'apporte as monnoiers du roy, à la chambre du roy, deutez à ce, et se la enseigne de la monnoie où ly noms du roy y appert aucunement, ly monnoier du Roy rendent nouvelle pour la vielle trois moins sur chascun cent pour la rénovation. Ilz font aussy tous leurs previlèges en pappier.

A Chinese author whose work is quoted by *Wang-k'i*<sup>1)</sup> writing about the history of the money bills of the Mongol-dynasty says: "Already were the bills in consequence of the overissue no more fit to measure the value of all merchandise, and when in consequence of the confusions of war there was for the government expenditure no sufficient quantity of money to meet the want, continually new bills were printed, the result was that the bills had no value while commodities fetched high prices, and when at last they were not accepted any more, that law by which they had been instituted, was repealed. At the time that they had their full value, the bills were generally used as balancing money but in the times of their decay when the deposit which should have backed them was not sufficient, more paper money was constantly made, till at last they (the bills) were not current any more."

"If the law of redemption shall be carried out an equal amount of copper money should be deposited when bills are issued, as it was when in *Sse-ts'uen* for the first time bills of exchange were emitted. The private persons who managed this issue took care that the bills came in when the money went out, whereas when the bills were issued the money was deposited, and in this way money and bills circulating side by side measured all merchandise of the empire, and in those days there was not the least reason why they should not circulate. But in the present time they do not know how heavy they shall make the punishments, simply to compel the people to circulate them, but in proportion as the punishments became severer, the use made of the bills became less, and this resulted at last in their not being current any longer and their circulation being out all at once."

1) *Su wen hien t'ung k'ao* XVIII 9a— | tains the most important part of the account.  
10a. The translation is free and only con-

The paper currency which “the grand khan spended outrageously” was one of the reasons that the Mongols were expelled from the country, but a short time after the Chinese *Ming*-dynasty began by trying once more to palm paper money upon the people. In the year 1375 the bill was issued, a photograph of which has been appended to this work. The history of these bills is little more than a weak echo of what has already been said about the paper circulation which for a long time dragged forth its insignificant existence. Occasionally history mentions a conversion or an order that the paper money should be accepted as legal tender, but no loud complaints, no state bankruptcy have resulted from it, very probably as the people having learned the value of a government-paper currency, made but little use of it.

About the middle of the 16th century when the Mandchu brought China under their sway, the paper currency was abolished, and ages passed away without any attempt being made to revive the old institution; its very existence seems to have been forgotten, so much so, that the Jesuit pater GABRIEL DE MAGAILLANS who many years preached the Gospel in the Western regions of China and also resided in *Peking* about 1668, in his “*Nouvelle Relation de la Chine*” can remark: “Il n'y a aucune mémoire dans la Chine et on ne trouve aucune marque dans les livres qu'on se soit jamais servy de monnayes de papier dans ce royaume comme MARC POLO le dit dans dans son second livre.”

Not until two centuries later paper money was made use of again, in consequence of the want trade felt of a lighter and more convenient medium of exchange. It reappeared in the same form as that in which it was first issued by “private persons” in 960 in the province of *Soo-tsh'un*. “Notwithstanding it is no legal tender”, a French diplomat<sup>1)</sup> writes, “it is everywhere accepted and seldom it occurs that the bills issued by some bank or other circulate at a discount.” Considering the history we have related this statement in my opinion might be reversed and run: Because it is not legal tender and because it is no concern of the State it is generally accepted as money.

The words of this French diplomat corroborate the statement

1) Lettre datée de Peking 12 Avril 1869 | ual des Economistes 1869. Vol. XV , p.  
de M. le Comte de ROCHECHOUART, chargé | 103 sqq.  
d'Affaires de la France en Chine — Jour-

made by some authors, that the present system of free banking seems to work favourably in China. Truly a remarkable contrast! While in Europe free-banking gradually disappears as impracticable and monopoly of the State itself or at any rate under immediate control of the State is becoming the general theory, we see in China the very opposite take place.

And how to explain the fact that free-banking works its way so well? The information given by several diplomates answers that question. The circulation of paper money issued at a certain place moves within narrow limits, and within the immediate neighborhood of the town; in no wise without the province; hence the people generally know whether the bank which issues the notes be solvent or not. Furthermore, the several money shop keepers and bankers of a town or district enter into a kind of bond agreeing to honor one another's bills and only he who has sufficiently proved to be solvent is admitted into the bond. Hence the different banks control one another and if one happens to become insolvent the consortium is apprised of it before the public, and takes measures to prevent great losses.

Credit exists only to the extent of advances of money on sufficient security. Deposits and mortgage seldom occur. Bills circulate and are bought and sold at the Exchange of Peking, but as far as we can judge, Chinese banking confines itself to issuing and repaying bills.

At the end of this work an interpretation will be found of two bills, one emitted by the State, the other, a scrip issued by one of the numerous joint-stock banks in Sang-hai. It may seem contradictory to speak of a bill emitted by the State, after having just told that since the conquest of China by the MANDCHU, the government issued no paper money any more. The contradiction is, however, explained by the fact that the State acts in the quality of a private person in order to enjoy some of the profits accruing from Banking. Therefore it has also adopted the name of a commercial firm and subjected itself to the very same regulations which other private banks have to obey to, in order to retain the favour and confidence of the public.

---

# CHAPTER I.

## FIRST NOTIONS OF MONEY.

BARTER. — ORIGIN OF MONEY AND PRIMITIVE SPECIES. — DENOMINATIONS TO EXPRESS THE IDEA OF MONEY, CURRENCY, MEDIUM OF EXCHANGE. — INFORMATION OF KWANTSZE, THE EARLIEST WRITER ON MONEY. — VIEWS ON THE CHARACTER OF MONEY AND THE USE OF IT IN ANCIENT TIMES, BY TWO CHINESE SCHOLARS OF THE ELEVENTH CENTURY. — SOMETHING ON THE USE OF MONEY IN THE BEGINNING OF THE TSEU DYNASTY. — TWO PASSAGES QUOTED FROM "THE BOOK OF RITES OF THE TSEU". — MA-TWAN-LIN'S CRITIC. — INTRODUCTION OF NEW COINS BY KING-WANG AND ADVICE GIVEN BY TAN, DUKE OF MU.

---

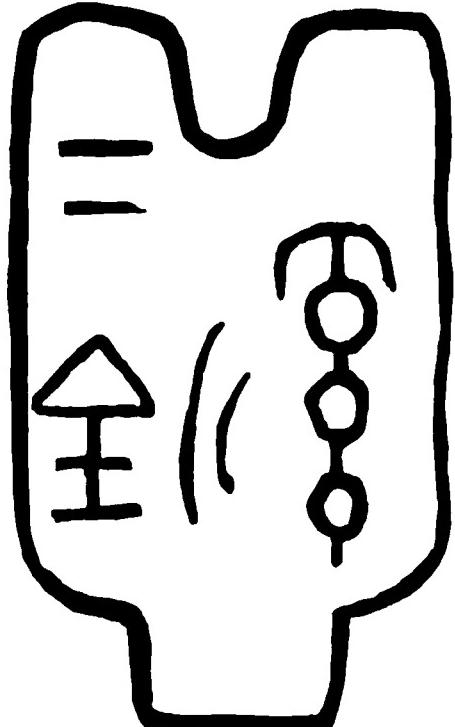

The primitive mode of commercial exchange in China, as in all other countries, was barter, the interchange of certain products of the earth, such as wheat and rice, or of men's manual labor, as silk, arms, etc., by means of which the necessary and much desired articles were obtained. It is, however, remarkable that while all other nations, in Europe as well as in Asia, have had a primitive currency recalling the lowest state of civilisation, the hunting and pastoral state, — when by means of furs and cattle exchange was effected — no trace of the same phenomenon is to be found either in Chinese history or language. The earliest record of money shows that the "blackhaired people" in the remotest times stood already on the third step of the ladder of civilisation, and that a subject of "the Son of Heaven" was either a husbandman or a merchant. For it is related that

有爲貨於神  
無。市帛。國農  
以日以列  
以交中聚鄺

Sin-nung (the second known emperor of China, who reigned about the year 2737 B. C.) instituted a market-place in his Empire in order to gather merchandise and silks. By day-time market was held to exchange the articles which people had for others which they had not.

But at the same time that among the common people, who earned their livelihood by cultivating the soil and feeding silkworms, barter was prevalent, there seems also to have existed a kind of coined metallic money, current among the travelling merchants, the circulation of which was however very limited, as it was not used by the people who lived by the produce of agriculture.

Ma-twan-lin alludes to that ancient money in the beginning of his "Examination", and the same subject is treated of historically and rather economically by two Chinese scholars, who lived in the middle of the 11<sup>th</sup> century of the Christian era. From both treatises we intend giving a passage. Besides, many old Chinese and Japanese mint-books show us drawings of those ancient coins, most of which, however, are covered with characters, in an old and nearly illegible writing-manner. One of them I have copied as I found it in a Japanese book in possession of the zoological Society Natura Artis Magistra at Amsterdam<sup>1)</sup>.

According to my Japanese informant the characters, read from the right-hand side to the left, are 安邑貨二金 which means current merchandise of the second metal (circulating in) the peaceful capital. With

1) To the kindness of the Director of this Society Mr. G. F. Westerman and of the conservator of the Japanese Museum and library Mr. G. Janse, I am indebted for the free disposal of several useful materials.

second metal silver is meant. It was cast by King-Yü of the *Hia*-dynasty 夏ノ禹王鑄ル, who reigned twenty-two centuries ago in China.

What Ma-twan-lin gives in reference to the money of ancient times is very little. As it is most likely a piece of a very remote date, and at the same time furnishes us with some ancient denominations of currency, we will first quote it, and then proceed to the explanation of the various names by which, in ancient and in modern times, money and its different qualities are designated.

或或三夏莒人謂謂有高有自  
刀赤品商人謂之熊陽錢太昊  
或或或之謂之泉貨氏氏矣昊  
龜錢黃幣之布商陶高謂太昊以來  
貝或或金刀齊人唐辛之昊來  
布白爲虞人齊氏金氏則

Since the reign, of *T'ai-Hao* (B. C. 2852) money is supposed to have been extant<sup>1)</sup>. In the reign of *T'ai-Hao* it was called *Kin*, metal, in that of *Yeu-nai-si* (B. C. 2697) and of *Kao-sin-si* (B. C. 2435) it was called *Ho*, merchandise. *T'ao-tang-si* called it *Ts'uen*, (a character now signifying a fountain) the people of *Sang* and *Ts'i* called it *Pu*, a hempen or silk piece of cloth, and the people of *Ts'i* and *Keu* called it *tao*, knives. The money of the first three dynasties of *Yü*, *Hia* and *Sang* (2255–1766 B. C.) was made of three different sorts of metal, yellow, white and red, and consisted further of cloth, knives and tortoise shells.

There is some evidence that in the remotest times, in which history is a blank, there was in China a currency of shells, much resembling the Wampumpeag cowries, found among the American natives, when the first New-England settlers arrived there in 1630. Firstly, because all the words denoting buying 買, selling 賣, riches 財, 貨, goods 貨, store 積, property 資,

1) Note the final particle 矣 by which no objective certainty but the subjective meaning of the author is expressed.

prices 買, cheap 廉, dear 貴, and many others referring to money and wealth are composed of the ideographical sign which denotes the word shell 貝<sup>1)</sup>). Secondly, because Wang-mang the usurper, who took possession of the Imperial throne 14 A. D., wishing to return to the ancient state of things, introduced again the old forms and sorts of money, and among them 5 different varieties of shells of an arbitrary value. Further there is a passage in the *Šu-king*, the historical chronicles, informing us that anciently shells were considered as precious articles. For we read that king *Pwan-kang* (1400 B. C.) laments the greediness of his ministers: "Here are those ministers of my government, who share with me the offices of the State, and yet only think of hoarding up cowries and gems," 具乃貝玉<sup>2)</sup>). Two songs in the ancient "Book of Poetry" make mention of shells as "an ornament embroidered in silk<sup>3)</sup>), and strung together by vermillion threads, fastened as an ornament on a warriors helmet<sup>4)</sup>."

The different denominations of money are:

1°. 布. 幣. 刀. *Pu*, *pi* and *tao*. Hempen and silk cloth and knives were the earliest articles of trade generally used for money, and as the first weighed metallic money was an imitation of the shape and a representation of those articles, the same denominations remained to designate those coins. The *pu*-coins represent a piece of cloth, a dress, and the *tao*-coins are in their outward form an imitation of a sword or knife. Even between the character 布 *pu* and the form of the coin

1) J. Klaproth was the first that in the Journal Asiatique directed the attention to that fact.

2) *Šu-king* IV. VII. 2. 14. Legge p. 240.  
3) *Ši-king* II. V. 61. Legge p. 346.  
4) *Ši-king* IV. II. 4 5. Legge p. 626.

pu, of which we give here an illustration, there is a resemblance

which still more distinctly may be seen from the form

the same character in the old seal-writing. The conclusion is easily arrived at that 布 or 刀 is the original ideographical form representing cloth, dress<sup>1)</sup>.

The illustration of the knife-shaped coin is of one used under the usurper Wang-mang (14 A. D.) and found in the valuable work of the Russian diplomate BARON DE CHAUDOIR, Recueil de Monnaies de la Chine, St. Petersbourg, 1842. (Planche II.) The character engraved on the coin is 代 to exchange, which here is used for 貨 article of barter, merchandise. It is the same as the third monogram 貨 on the coin of the Emperor Yu (page 2). Together with the knife-shaped coin the character 刀 as a denomination of currency is lost. 布 and 紵 (hempen and silk cloth), however, are still extant, as we will see in the passages quoted from Matwanlin, and the second word, used by itself or as part of a compound, has become the standard term for currency<sup>2)</sup>.

2o. 貨 ho, MERCHANTISE, ARTICLE OF TRADE (*merr*), composed of property and the verb

1) I have copied the coin from a Japanese mintbook. A description of it will be given in Chapter II, Currency instituted by Wang-mang.

2) See, for instance, the title of Ma-twan-lin's Examination 錢幣考.

to change is likewise one of the oldest names of currency, and may already be seen on the coin of the emperor *Yü*, and up to the present time, taken by itself or as part of a compound, it is used in the same sense, as for instance in the frequently occurring 通貨 general or current merchandise 貨布 lit. cloth-merchandise, or the cloth-representing coin, the name of a coin in use under *Wang-mang* (14 A. D.) 錢貨 money-merchandise, etc.<sup>1</sup>). The economical truth, that money is a merchandise which should have its own intrinsic value, a truth so frequently lost sight of in our modern history of money, has become with the Chinese a rooted truth by the constant use of the denomination 貨; and frequently we see in Chinese history, that whenever the sovereign has arbitrarily altered the weight or standard of the coins, his prime minister remonstrates with the argument. "Money as a MERCANDISE should have an intrinsic value."

3o. 錢 *tsien*, COIN, COPPER CASH, is the general name for the round and square holed Chinese coins in common use. In combination with other characters already treated of, as for instance 錢貨。錢布, it is used for the general signification of Medium of exchange.

Another quality of money, is expressed by Chinese economists by the character 權 *Kiuen*, properly meaning to weigh or balance on the steelyards, equivalent; for instance, 先有所謂穀粟泉布之權. Formerly, they had what is called the equivalent of a currency consisting of grain and rice. — And a little further on the passage is found: 以

1) Mat. VIII: 21 b 其輕重可得貨之宜 Its weight may be the reason that it is fit for currency 古者 | 以龜貝爲貨 The ancients made currency of tortoise shells.

泉布爲權。常不使權勝本. Money was made the equivalent, but they did not always take care that that equivalent was adequate to its origin (was what it was intended to be when it first was instituted). [Mat. IX: 36 b].

4°. 圓法 *yuen-fat*, properly ROUND or CURRENT RULE is a denomination found in the "Rites of the *Tšeü-dynasty*"<sup>1)</sup>, in which we read that the administration of the State-finances was divided among nine different principal offices or boards 九府圓法. The signification of 圓 is, according to a definition of Ma-twan-lin's, similar and current 圓謂均而通也.

5° There are several other terms, as 寶 *pao*, precious object, treasure. For instance the expression 通寶 "current money" in addition to the year-name of the fabrication of the coin, is the constant design of the coins of the *T'ang* and subsequent dynasties (800—1877). Further, 貫。緡 and 鐳 which all three have the signification of a string of 1000 cash.

6°. Finally, there is the remarkable word 泉 *ts'uen* which at present means, fountain, spring. We see it in a seal-writing on the ancient coins as a denomination of money, and now it is still used in daily occurring expressions to denote money, as 泉貨。泉布. An attempt has been made to explain its signification by saying that money streams and, so to say, spreads over the community as water coming forth from a fountain, but on authority of a scholar under the *Sung*-dynasty, this is a misinterpretation, and the monogram 泉 of the old coin is not even related to the modern character 泉 fountain.

1) This book was written more than eleven centuries B. C. and is still extant. When treating of the money under the *Tšeü*-dyn. we will quote two passages from that "Book of Rites" having reference to the budget and the management of state finances.

But let us hear *T's'ing-ts'iao*, who according to Mayers<sup>1)</sup> was a scholar distinguished by almost universal knowledge.

夾祭鄭氏曰。古文錢字作泉者言其形。如泉文變而爲刀器。再變而爲圜法郎。廢世太公所作。自圜法流通於民實便之。故泉與刀爲形也。其後人不曉其謂也。觀古錢其形郎篆泉文也。後世代以錢字。故泉之文借爲下體。不從水也。先儒不知本末。謂流於泉。布於布寶。利於刀。此皆沿鑿之。<sup>2)</sup>

*Kia-tsi* of the family-name *T's'ing* says — “In classical style the word money is expressed by the character 泉 and has reference to the form of the coin; synonymous with this character but different in form is the character sword, which has reference to the instrument (anciently used as money). Another synonym is *Yuen-fat*, which was instituted by *Tai-kung* (the duke of *T'seu*). Since that time *Yeun-fat* has passed through different ages, and as the people thought it convenient, *ts'u'en* and *tao* were discontinued, and posterity does not more understand the meaning of that character. If we look at the shape of ancient coins, (we observe) in seal-writing the character 泉 (𡇤) which later generations have substituted by the monogram 錢. If they, therefore make the derivation of the (ancient) mark *Ts'u'en*, they make of it the character 泉 which has the meaning of water-fountain. But the seal-character of the real 泉 (of ancient coins) is in its lower strokes not composed of the radical 水 water. The most eminent scholars do not know either its origin or end (whence it arose or what has become of it) and when they say that it streams faster than a fountain, that it spreads more (widely) than cloth-parcels, that it is more precious than gold and more advantageous than knives, these (various opinions) are nothing more than sailing along the coast and boring in the direction of truth.

1) Chinese Reader's Manual. I. 61. *Kia-*  
*tsi* is the pseudonym of the author.

2) 之 = 往 going to.

From the form of the primitive species of which we gave the illustrations, it will easily be seen that money took its origin in barter. The Romans derived their pecunia from pecus and on their first coins engraved the figure of an ox or a sheep, the Chinese did very much the same thing when, instead of their knives and articles of clothing, they gave to a weighed quantity of different kinds of metal the shape of articles of clothing and of knives, which henceforth served for money.

There exists a fragment of one of the most ancient Chinese authors on the origin of money, which relates in a rather ingenuous way how circumstances led the ancient sovereigns to make money as a means to relieve the wants of their people.

遠能絕周困。鑄禹之金者。之旱。管子曰。  
其通壞七東幣以無湯。禹五年水。七  
至爲斷八西以歷山賣而莊有。湯七年  
之難。途舟南救山莊。水人。其車里北人之金者。人之子年  
故之不水去之金者。人之子年

Kwan-tsze says<sup>1)</sup>: "In the seventh year of the reign of king *T'ang* (B. C. 1766 the founder of the *Sang* dyn.), there was a drought and in the fifth year of the reign of king *Yü*, (B. C. 2205 the founder of the *Hia*-dyn.) there was a flood. Among the people who were in want of rice-gruel (food), there were who had sold their children (for slaves); king-*Tang* then took the metal of the *Tsoang*-mountains, and cast money that he might ransom the sold children of the people who were in want of food. King-*Yü* took the metal which was found in the *Lei*-mountains, and made money of it to relieve the distress of his subjects. When from east, west, north and south, all over a surface of 7 or 8000 *li* (miles) all intercourse with these parts was cut off by the flood, and in consequence of the length of the way and the diffi-

1) Kwan-tsze was one of the most renowned statesmen of antiquity. In 685 B. C. prime Minister of the feudal State of *Tsi* he greatly contributed by a prudent government to the rise of his native country

among the rival principalities of that time. He has written a work on government and legislation of which the piece quoted is probably a fragment. See Mayers Chin. Read. Man. I. 293.

珠託用於其重。黃金爲上幣。玉爲中幣。刀布爲下幣。以三者以財飽食之。則非有補於暖也。非有補於天下也。則非有命平物也。先王以衡衡天下也。人以衡衡天下也。事以衡衡天下也。守於飽食之。則非有補於暖也。非有補於天下也。則非有命平物也。使物一高一低。則非有衡衡天下也。事以衡衡天下也。守於飽食之。則非有補於暖也。非有補於天下也。則非有命平物也。不得有調也。一者以而財飽食之。則非有補於暖也。非有補於天下也。則非有命平物也。使物一高一低。則非有衡衡天下也。事以衡衡天下也。守於飽食之。則非有補於暖也。非有補於天下也。則非有命平物也。

culties to reach them neither ship nor cart could penetrate thither, (the people) therefore relied on and employed according to their weight (the following sorts of currency). Pearls and gems were used as the first, the yellow metal as the second, and swords and cloth as the lowest sort of money. As to the effects of these three different sorts of money, if you took a handful of them, they could not supply (you) with clothing (lit. to warm the body) and as to eating them, there was no possibility of getting satiated. In order to protect the precious goods, to promote the welfare of their subjects, and to bring the kingdom to a perfect state of order, the ancient sovereigns gave the instruction, saying: by weighing in a balance, the result will be that articles, one of which is high and the other low, will not obtain the quality of being equal".

A note, given by Ma-twan-lin to elucidate the last sentence, where mention is made of the invention of the steelyards in order to measure the value of objects of different size, runs as follows:

歸利可一使重而中故無平與若五  
於門權一下之行下設其則萬五  
上悉制乃高術輕幣上利人物<sup>1)</sup>穀

"When the relation between the five species of grain and all living beings is proportional, people have no occasion to adopt those several sorts of money (high, middle and low); but by applying the expedient of weighing, one may obtain that one object is high and the other low. And by weighing the goods, one will get an advantageous issue which will wholly agree with the above-mentioned (expedient of making use of several different objects for money).

But those old forms of the medium of exchange soon proved to be very inconvenient, and the right principle, that money,

<sup>1)</sup> 萬物 the universe, all creation.

whose destination it is to roll about the world, should be round of form, soon became a firm conviction with the Chinese; hence it is recorded that in the reign of the *T̄seu*-dynasty (1022 B. C.) money was made, which was round of shape and had a square hole in its centre. This convenient form once adopted, is, as it were, petrified in Chinese society. If, at different times, weight and quality vary, with a few exceptions which shall be duly mentioned, the form has remained unaltered during nearly 30 centuries. In this case also the spirit of invention had reached its climax, and the Chinese rested satisfied faithfully to follow the example of their venerable ancestors without any important deviation from the beaten track.

The metal of which money was made, was in ancient times of three different kinds — gold, silver and copper; the last however, rather a species of bronze composed of copper, tin and lead. As the country itself was not rich in precious metals, gold and silver, as we shall see, were in use only in the earliest times, when currency was little needed; moreover, these metals were totally unfit for Chinese society on account of their high valuation. Gold had ten times the value of silver, silver ten times the value of copper, and when we learn, according to a fragment from the "Statistical returns of articles of commerce and food" in the days of the *Han*-dynasty (about the birth of Christ), that one individual of the lower class of people did not even spend one cash a day to supply his wants 日用有不滿一錢, it is evident, that a currency of great intrinsic value was of little use in those simple times. Generally, the gold and silver coins were used as presents to princes, and as rewards to the highest officers of state for meritorious actions performed by them. *Sui*, a scholar

in the reign of the *Sung*-dynasty gives us the following information on the subject: "If by the government great outlays were made; or great rewards were given, they usually consisted of metal, and especially of yellow metal. In the time that the *Han*-dynasty ruled over the empire, gold and silver were still used as currency, but after the reign of the Emperors *Siuen-ti* and *Yuen-ti* (B. C. 73 and 48) gold as money began to be exhausted. After the reign of the Later or Eastern *Han*-dynasty gold was very seldom used, and by the great spread of the religious doctrines of *Buddha* and *Lao-tsze*, gold was employed to adorn the images (of those sages) made out of wood and clay. And as it then ceased to be used as money, it was made into vessels and used as ornaments of dress", [Mat. IX 41b].

Occasionally we read in history of iron money, which circulated besides copper, but which did not answer on account of its want of portability, little intrinsic value and the general unfitness of the material to supply the place of money.

What idea did the Chinese attach to money? what were its functions and character? and how is it that in olden times money was not made at all or in very small quantities, while in later times metallic money could not be made in sufficiently large quantities? These questions are treated of by two scholars, who lived in the reign of the *Sung*-dynasty (about A. D. 1000 — 1100), and as their views of the matter are not unworthy of being brought under the notice of Western economists, I have translated those parts of the two essays, which refer to the money among the ancients<sup>1)</sup>). Further on, when treating of paper-

1) I have, moreover, added the Chinese text to the translation, as the fragments contain many curious Chinese phrases and constructions interesting to sinologues.

money, we shall once more quote these authors, who, on this subject are still much more important, living as they did at a time in which China was visited by one of the greatest of calamities that can befall a people, viz. "an over-issued and depreciated paper-currency."

## ESSAY BY LIU-TSU-KIEN<sup>1).</sup>

東萊呂氏曰。泉布之設。乃是阜通財貨之物。權財貨之所由生者。考之於古。如管子論禹湯之幣。皆緣凶年。故作幣救民之饑。考之周官司市。凡國有凶荒。則市無征而作布。又考單穆公諫景王之設。古者天災流行。於是量資幣權輕重。作

Tung-lai of the family-name *Lui*<sup>2</sup>) says: "The institution of money, that is to say, the collecting together of some current precious object or merchandise (lit. article of trade) took its origin in the weighing of some precious article. If we inquire into its origin in ancient times, we learn from *Kwan-tsze* about the money of the emperors *Yü* and *T'ang*, that in bad years they made money in order to relieve the distress of the people suffering from famine. And if we inquire into it (the state of money) at the time that the market-justices instituted by the *T'seu-li*<sup>3</sup>) (managed the affairs), we see that whenever the country was visited by famine and failure of the crop, taxes were not levied on the market, but that currency was fabricated, and if we consult the account of the remonstrances made by *Mü*, duke of *Tan*, against the measures introduced by the ruler *King-wang* of the *T'seu-dynasty*, (it appears to us) that the ancients, as soon as calamities from heaven floated and spread (over the earth), measured the riches according to their weight and made of them a currency by which they saved their people.

1) Mat. IX 35a sqq.

2) Tang-lai was the pseudonym of Lin-tsu-tien (1137-1181 A. D.) according to

Mayers I no. 466. one of the most renowned scholars of that time.

3) *Tsou Kwan* is the ancient name for  
*Tsou-hi*.

幣以救民。古人論財貨。但論九年之積。初未嘗所謂論藏者數萬千緡。何哉。所謂論農桑衣食財貨之本。錢布之流通。不過權一時之宜。而已。先有所謂穀粟泉布之數。積鑑至多。亦何補盈虛之者。皆以穀粟爲本。所以三代以前。論財賦。用錢幣爲民泉賦之所以九貢九賦。用錢幣爲俸祿。亦是頒賦甚少。所謂俸祿。亦是頒賦甚少。

If however the ancients make mention of treasures<sup>1)</sup>, they only mean the produce of the soil, and it had not yet occurred that several millions of cash strung together, hoarded up in treasuries, were taken in this sense. And what was the reason? Because to clothing and food, produced by husbandry and the cultivation of mulberry trees, they used to attach the idea of wealth, whereas the circulating money (lit. the currency, which was continually streaming and going on) did not surpass the quantity required to meet the necessity of it at a fixed period.

Formerly, there was what is called the equivalent of a currency consisting of grain and rice. As these (articles) were generally given (when anything was bought), how should it (then) have been possible to supply the necessity of measure and quantity (lit. the number of superfluity and want), in the case they had heaped on an excessive quantity of cash, whilst they were in want of the special basis (of exchange of that time). And as in the reign of the three dynasties and before this time<sup>2)</sup>, people, when speaking of wealth and taxes, always considered grain and rice as the basis, the properly so called money did not surpass a fixed quantity necessary to measure the weight (of things).

Because the taxes levied on the people were taxes in kind and tributes, the use made of money in paying them, was very scarce, and as to the bestowal of salaries and emoluments, this was managed in the same way. Fields were distributed among princes, noblemen and great

1) 九年之積 properly the store of nine years. — In three prosperous years of agriculture, the crop of one year was not needed for food by the people, but stored up for bad years that might come. Here such a store of 27 years'

labor is taken in the sense of treasuries.  
三代以前 UNDER and BEFORE the three dyn. cf. 以上 frequently found in the history of Wang-mang's money. — Chapter II.

田制祿君卿大夫。不過以采  
地爲多寡亦未嘗以錢布爲  
祿。所以三代之人多地者不  
爲末作。蓋緣錢之用少。所以  
錢之權輕。惟凶年饑荒。所以  
作幣先儒謂金銅無凶年。權

石。職之高下。所謂萬石千石。以  
錢布爲重。

dignitaries (according to their ranks), and the only difference was in the size of the piece of land owned, and so it did not occur that money was considered as official pay. For the reason that the people under the three dynasties possessed a great deal of land, there were no idlers and as the use of money was scarce, the consequence was that money was of little importance. Only when bad years brought on famine and distress, money was made, and the reason of it was, according to the statement of ancient scholars, that gold and copper had no bad years. According to the want of the times they made it, that by means of it, (the commodities) which the one had and the other had not might circulate, and thus effect a due proportion between abundance and want, and nothing more<sup>2)</sup>. These now are the reasons, why formerly under the three dynasties, currency is seldom made mention of.

As we come to the time that the *Han*-dynasty occupied the throne, the old custom still existed. In order to distinguish the rank and offices they held, from the king and his nobles down to the assistant officers, the terms tens of thousands, thousands and hundreds of stones (picul of rice) were made use of, and because in the same way all salaries were reckoned by grain and rice, the currency was not considered very important yet.

1) 末作 an idler, (lit. a *nothing-doer*)  
= 游手. The author means by it false-coiner. The student of Ma-twan-lin's text will see that at the next page, which we omit in our translation, the expression

末作 is found twice again, firstly in combination with 浮游, secondly with 游手. [Mat. IX 36b]

2) Nothing more lit. and there stop, is a frequently occurring expression denoting that the phrase is at an end.

ESSAY BY SUI-SIN OF THE FAMILY YE<sup>1).</sup>

說。水心葉氏曰。錢之利害有數。古者因物權之以物。錢幣之所起。於商賈。通行四方。交至遠。起於近之制。物不可以自行。故以金錢行之。然三代之世。用錢至少。自秦漢以後。浸多。至今日。非錢不行。三代以前。以錢極少者。當時民有常業。所一家之用。自穀米布帛蔬菜。魚肉皆因其力以自致。計其菜業。所以待錢而具者無幾。止是商賈天下。所以權天下。

Sui-sin of the family-name Ye says: "On the advantage and disadvantage of money there are several theories. The ancients used goods (commodities) which they weighed in order to serve for money, and the subsequent ages used money, which was weighed in order to serve for goods (riches)<sup>2)</sup>. The origin of money is to be found with the merchants who travelled all through the four quarters, as they went to trade in regions far off and near, and because goods could not be dealt in by means of themselves, they were dealt in by metallic money.

But in the period when the three dynasties ruled over the Empire, the use of money was very limited. Since the Tsin and Han swayed the scepter, it gradually increased, and at the present day no business is transacted without the use of money. As formerly under the three dynasties money was very scarce, every one of the people was continually engaged in supplying by manual labor whatever was needed for the support of his own family, grain and rice, silks, vegetables, fish and meat. The available (lit. waiting) money when gathered, was computed to amount to a very small quantity, only so much as was required by the merchants to pay for the products of the government which they bought.

1) I have not found his name in Mayers or elsewhere. From his writings it appears that he lived nearly at the same time as the foregoing Tung-lai.

2) The meaning is this: Anciently goods were used as money, now money is con-

sidered as goods (riches). The pun in the Chinese text makes a literal translation difficult. The term 物 is used in a double sense. Firstly, it stands for goods, merchandises. Secondly, for goods, riches.

之物。然後賴錢幣之用。如李悝  
以上。是時已爲多矣。蓋三代時。  
平糴法計民一歲用錢只一千  
尚不及此。土地所宜人人力所自食。

皆從錢起。銖兩多少。貴賤輕重。  
其他凡世間飲食資生之具。之  
皆從錢起。銖兩多少。貴賤輕重。

But when afterwards the service of money was more and more adopted, and Li-huei<sup>1)</sup> laid down a general regulation as to the purchase of provisions for governmental use, it was considered that every individual needed 1000 pieces of money or a little more, a year. And this was rather much for that time, for under the three dynasties it did not amount to this figure. What was offered to the spirits of the earth<sup>2)</sup>, and what was consumed by the mass of the people, if not grain and rice, then certainly it was silks, and because every one of the people made them for himself, there was altogether no room for metallic money, and as the people quietly attended to their business, there was no want of metallic money either, and therefore the use made of it was very limited, and the quantity which was then used, was, if reckoned over a whole year, still below the generally accepted estimate of that time.

But the regulation of its quantity in subsequent ages was quite different. A hundred (different) things originated in money, in consequence of which all goods were measured by means of money. When (formerly) it was pieces of silk, they were measured by tsangs (10 feet) and tsik (feet), and when grain and rice, the measurement was ascertained by hu and meu. All other provisions that arose, and were hoarded up in subsequent ages, are, since money gradually got more important, meas-

1) Liu-hui was a minister of prince Wu of Wei. Mayers I no. 345 does not state any particulars about him.

ured by money as to weight, quantity, price and value. From the most important (articles) transported in behalf of the government, down to the smallest tribute paid by the people as taxes, what is gathered in provinces and districts, and what by travelling merchants is transacted, all this is governed by money; and that is the reason why later generations use 100 times 100 the money, which the earlier (generations) employed. But how is it that the three dynasties had not too little, and the later generations not too much money. The three dynasties had all isolated their kingdom (from all other countries), that they might manage their own affairs; and what was produced by one country, was also sufficient to supply the wants of that same country. And (those productions) did not circulate through the whole kingdom, nor was it allowed to export the goods, and so it had not come to that pass, that people were obliged to spend the strength of their minds to get a living. The ruler, moreover, in a judicious way, instituted inhibitions, and it was not yet necessary, that the exhausted forces of the empire where required in the remote regions<sup>1)</sup>). Hence the book of Records says "When they love only the productions of the ground, their hearts will be good", and Lao-tsze says: "The highest state of perfection of good government is reached, when the people think their food sweet, and their clothes beautiful, when they rejoice in their uneducated simplicity; when the inhabitants of neighboring states, who are so near each other, that

1) As it was when the author wrote this treatise, and China was in constant war with the barbarous tribes on the North and

West frontiers, and a great deal of North China was already invaded by Tartar princes.

其無所用錢如此。安得不少。後世天下既爲一國。雖有州縣異名。而無秦越不相知之患。臂指如一天下之民。安得不交通於四方。則商賈往來。南北互致。又多於前世。金錢安得不多。所以後世錢多。此數者皆錢之所由多用。錢既多。制度不一。輕重大小厚薄。皆隨時變易。

they can see one another, and hear the crying and barking of their fowls and dogs, have grown old and die without having had mutual intercourse." In such a condition there is no need for money, and it is easy to obtain, that there be no want of it. (lit. that it was not scarce).

Afterwards when the empire was united into one kingdom, though the different names of provinces and districts were still existing, and the great assault of the *Tsin*(-dynasty) had not yet happened, and the people did not feel sorry that they did not know each other, and that arm and finger (i. e. high and low) were equal, it was still possible for the people not to trade, and not to penetrate into the four quarters. In those early times, however, tradesmen were continually coming and going, and kept up a constant intercourse between South and North, and thus it was easily obtained, that metallic money was not plenty (for it was not generally needed).

The reason why the quantity of money was afterwards so large, was because it was so generally made use of, and as there was such a large quantity of money, calculation and measure were not always the same, so that in the course of time, weight, size and thickness were continually altered.

## THE T'SEU-DYNASTY.

In the year 1122 B. C. the *Sung* or *Yin*-dynasty, the second of the so frequently spoken of three dynasties, was overthrown, having ruled over the empire more than 600 years; the last tyrant being dethroned by the duke of *Ts'eu*, eldest son of the Chief of the West, who mounted the Imperial throne under the

title of *Wu-wang*. His younger brother *Tan*, who in history is generally known under the title of 周公 *Tſeu-kung*, or duke of *Tſeu*, composed a work, in which he lays down the rules, according to which the new dynasty was to govern the empire. This work is still extant, and its precepts continue to be looked upon as a guide to the government of the State.

Having given some information on the different sorts of medium of exchange, current in the beginning of the reign of this new dynasty, Ma-twan-lin quotes two fragments from the book on the state laws and regulations of the *Tſeu*-dynasty, which refer to the administration of the state finances, and which undoubtedly are the oldest historical records, which so minutely bear witness to the high degree of development attained by the administrative government of those times.

I will first give the historical facts in their original form, and proceed with the most important parts of the quotations from the *Tſeu-li*.

以 方 而 賈 周  
斤 輕 重 易 制  
爲 重 一 物 以  
名。以 斤 黃 商  
銖。錢 金 通  
黃 圜 方 貨。  
金 函 寸 以

In behalf of the merchants, the *Tſeu* made a current merchandise in order to serve as a price in the exchange of goods. The gold was of the size of one square *Tsün* and weighed a *Kin*, the copper coins were round and had a square hole in the centre, the weight was ascertained by *Tſus*. The gold currency (took its name from the weight and) was called *Kin* (pound).

Silks of a certain length and breadth, called a *p'i* 疊, were also a unit of value, but as copper-cash was by far more convenient, being easier spread than cloth, better strung together than silks, and more profitable than the gold coins, it soon was preferred and generally used.

布。征 則 荒 市 周<sup>1)</sup> The justices of the market, instituted by the book of rites of the *Tšeu*-dynasty<sup>1)</sup> made money in bad years when the people were visited by a failure of crop, epidemics, or a great mortality; and taxes were not levied on the market.

According to the translation of *Tšeu-li* by M. E. Biot (I 315 n°. 3), a great deal of money was cast in bad years in order to enrich the people. — A slight economical error for that time, to be sure.

By the rites of the *Tšeu*, there were instituted nine different boards of administration for the revenues and expenses of the crown and the State 九府圜法. We omit the special denominations of each of them, they are to be found in *Tšeu-li* and *Ma-twan-lin*, but we will look more closely at the regulation of the budget and the general expenses of government, which will show us, that already in those remote ages, people were guided by principles which we find back in our modern politics.

之 之 旅。喪 凡 之 王 之 者。之 百 之 外  
財。幣。共 紀 祭 衣 及 公 有 用。物。入 府  
凡 齋<sup>3)</sup>其 會 祀 服 后 用 法 凡 而 出。掌  
邦 賦 財 同 賓 之 世 也。百 有 待 以 邦  
之 子 用 軍 客 用。子 共 官 法 邦 共<sup>2)</sup>布

The *Wai-fu* or administrator of the Exterior magazine, manages the revenues and expenses of the state finances, in order to provide for a hundred different things, and he is prepared for (lit. awaits) all the necessary outlays of the country, which are regulated by law. (The expenses of all the public functionaries are fixed by law). He supplies the necessary outlays for the *liste civile* (dress and wardrobe) of the king, the queen and the hereditary prince, and the general expenses of sacrifices, entertainments of princes and their nobles, coming as guests to the court, mourning arrangements, court receptions and assemblies of the troops; and further for

1) The *Tšeu-li*. 周禮 was formerly called *Tšeu-kwan* 周官, and is here called by that old name.

2) 共 is here continually used for 供.  
3) 齋行道之財用也.

惟王及后之服不會。歲終則會。其餘歲終則會。其餘。凡國事之財用取具焉。凡國事之財用取具焉。而援之。以國服爲之。凡國事之貸者。與其有司辯焉。凡國事之貸者。與其有司辯焉。旬日。喪紀無過三月。凡賒者。祭祀無過三月。買者。凡賒者。揭而書之。以其賈買貨之滯時<sup>2)</sup>之物。於市之不售。以市之不售。以民使用者。以其賈買貨之滯時<sup>2)</sup>之物。於市之不售。以市之不售。以小用皆受焉。歲終則會。

travelling expenses, and the precious articles given away as presents.

In general he receives all the money used for small expenses in behalf of the state, and at the end of the year he makes his balance, only the expenses of the king's and the queen's wardrobe are not included in it.

The *ts'uen-fu* (which according to the *T'seu-li* is the collector of taxes) manages the money which is paid as taxes on the market. He collects the goods which are not sold in the market, which are preserved for the use of the people. He publishes and puts down the commodities which he has bought, according to their market-price, and waits for the buyers who may at any time wish to buy them.

Whenever they want the goods for sacrifices, the buyers on credit may, as a rule, not delay their payment beyond ten days, (and if the purchased wares are destined) for mourning, they may not delay to settle their accounts beyond three months.

He consults the justices of the market about those persons who borrow money from him, and reckons the interest according to the wants of the State. He uses to receive and gather all the treasures in behalf of the state-service. At the end of the year he makes the balance of revenues and expenses, and delivers the surplus (to the 職常 according to the *T'seu-li*).

Now follows one of the few treatises of Ma-twan-lin himself, in which he expresses his opinion on the financial system of the *T'seu-dynasty*. — We have abbreviated the piece a little, and given only that part which contains the author's own peculiar notions on the nature of money. It runs as follows:

1) 納 is here used for 敘

2) 不時 = always, incessantly.

古人創泉布之本意。實取其流通。緣貨則或滯於民用而錢則無所不通。而泉府一官最爲便民。滯則買之。不時而欲買者則賣之。無力者則賒貸與之。蓋先王視民如子。洞察其隱微。而多方濟其缺乏。仁政莫尙於此。初多非專爲謀利取息設也。不原其立官之本意。而勸<sup>1)</sup>其一語以斷天下大事可乎。買之於方滯之時。賣之於欲買之際。此與常平賤糴貴糶之意同。泉府則以錢易貨。常平則以錢易粟。其本意

When the princes of antiquity first formed the fundamental idea of currency, they really had directed their attention to its continual streaming and circulating. If that currency consisted of merchandise, some princes hoarded it up for the use of the people, but whenever it was really money, there was not a single piece which did not circulate.

The one official who collected the taxes, the *Ts'uen-fu*, was very convenient to the people. Whenever the market was heavy with provisions he bought them, and when there were people who at all times came and were desirous of buying, he sold them. And if they were in want of ready money, he sold the goods on credit, or (first) he lent them the money they wanted, and (afterwards) gave them the goods. In this way the ancient sovereigns considered the people as their children. They instituted a thorough inquiry into the distress of the people, which was concealed from their eyes, and everywhere they relieved distress and want, and what regards their benevolent government, there was indeed nothing superior to that. Originally it was not with an intention to take profit that they determined to take interest, and is it right not to inquire into the fundamental idea of the institution of that official, but always to harp upon<sup>1)</sup> that same saying, that it was in order to curtail the great public service of the kingdom? He bought the provisions at a time that they were plentiful everywhere, and he sold them at the time when the demand for them was great. Now, this was united with the intention to buy generally cheap and to sell dear (when prices had risen.)

1) 勸 = 謐 to repeat, to assume the language of another, used in a contemptible sense. In Dutch nabauwen.

皆以利民。非謀利也。然後世常平之法。轉而爲和糴。且以其所儲。它用。不濟民。則惟恐其數之不多。利之不羨。於是亦以理財之法。視之矣。

The collector of taxes used his money to exchange it for goods and generally for rice, and the original intention was altogether to benefit the people, and not to increase their own profit. But ensuing generations have subverted the good customs of antiquity; with united strength they effected the purchase of grains, but what they accumulated, they used for quite another purpose, and not in behalf of the people. Then, they only feared that the number (of consumers) should not be great, and that their profits should not be excessive, and therefore they considered it (those purchases of grain with united strength) also as a reasonable way to manage the finances<sup>1</sup>).

Now, the necessity that money should have the property of divisibility, begins to be felt, as appears from the next fragment in which Ma-twan-lin again pursues the thread of his history.

周景王二十一。惠子。觀農。瞻不有周郭。以十肉好。皆十二銖。文大泉五。寸二分。重大錢。徑一錢輕。更鑄。

King-wang of the *Tšeü*-dynasty fearing that the money was too light, made in the 21<sup>th</sup> year of his reign (523 B. C.) great copper coins of a diameter of 1.2 *tsün* and of a weight of 12 *tshu*. The design was *Ta-ts'uen* or great currency 50 ( $\frac{50}{100} = \frac{12}{24}$ )<sup>2</sup>). The body of the coin and the hole were all round furnished with a raised edge (in order to prevent the filing off of copper dust)<sup>3</sup>). But to meet the requirements of husbandry, they did not answer the purpose.

1) The last sentence is antithetical to the preceding "the ancient sovereigns considered the people as their children."

2) An ounce was 24 *Tsu*. Thus, 12 *Tsu* represent 50% of an ounce. As according to Amiot 1 *Tsun* = 0.0205 m. the diameter was on an average 0.0246. According to another statement nine of these pieces had a length of the foot of *Hoang-ti* = ± 0.25 m. in which case the diam. of one

piece must have been 0.0275. It is utterly impossible to ascertain the exact size of ancient Chinese measures, because it was frequently altered, while the names remained the same.

3) A difficult passage — 肉 is the flesh or substantial part of the coin, Jap. 肉 Mimi, 好 is the square hole in the centre, Jap. 丂ナ Ana = 孔, 郭 is pro-

王將鑄大錢。單穆公曰。不可。古者天災降戾。於是乎量資幣權。輕重以賑救民。民患輕則爲作重幣以行之。<sup>〔幣<sup>2)</sup>〕</sup>幣輕物貴也。於是乎有母權子而行。民皆得焉。若不堪重。則多作輕而行之。亦不廢重。於是乎有子權母而行。民失小利之。今王廢輕而作重。民用將有其資。能無匱乎。若匱王用將有未至。有遠志。是離民也。且夫有備。謂之急。是將厚取爲民。民不給。不相入也。可先而不備。謂之急。是將有遠志。是離民也。且夫有備。謂之急。是將厚取爲民。民不給。

As the king was about to cast (those) "large coins", (his Minister) Mu-kung<sup>1)</sup> of Tan said: "You ought not to do this. Anciently they always tried to ward off the calamities of heaven, and therefore they measured their precious objects by weighing them in light and heavy ones, in order to relieve the people. And whenever the people feared that the money was too light, they made a heavier currency, and brought it in circulation. (For, says a note, when the coins are light the wares bought with them are dear). And thus they had the mother (i. e. the large coin as unit of value) and the child (the little coin) was weighed in circulation, so that the people got them both. If (on the contrary) the heavy money was unfit, they made light money in great quantities, and brought it in circulation; they did not, therefore, abolish the heavy coins, and thus they had the child (as a unit) and the mother weighed against it in circulation. So the big and the little money were a benefit to the people.

But now that the sovereign abolishes the light and institutes the heavy coins, the people lose their wealth in consequence of it; and can this be without their becoming exhausted? and if the people are exhausted and the sovereign wants them, he will have a people in sorrow and want,

perly a wall to defend a city, here the raised edge. In a Japanese book on Chinese coins, the following passage occurs —

新錢ヲ鑄ル肉好ニ

周郭<sup>ヲ</sup>シテ。Anew he cast coins, the outer edge and inner hole of which are

furnished with a surrounding raised rim. Cf.

古今泉貨鑑 vol. I. p. 13a.

1) Mu-kung, is a name which frequently occurs under the Tsin-dynasty.

2) Occasionally, I have inserted in the Chinese text a note of Ma-twan-lin's in parenthesis [ ]

弗日竭汗而塞王用且之先可  
聽矣也也爲川府以絕召之後  
王無其潢原猶實民灾謂而

and this being so, he will have to levy heavy taxes in behalf of the people, and they, not being able to pay them, will have far-reaching thoughts (will estrange their hearts from their sovereign), and the end will be that the people leave the country.

But, moreover, to have taken measures for what is not necessary, while they are still to be taken for what is impending, and then afterwards to be obliged to repair the evil (caused by this injudicious way of proceeding), will never do (lit. cannot enter together.) To be able to take measures beforehand and not to do so, is what I call to draw misery on ourselves; and to arrange beforehand what we are able to do afterwards, that is what I call to summon up calamities.

Besides, you cut off the custom of the people to fill the treasury of their king, and that is as if you were stopping up rivulets and sources to make a dirty pool. The drying up of it will be the result in no time. The king however did not listen.

---

## CHAPTER II.

### HISTORY OF MONEY UNDER THE GREAT HAN-DYNASTY.

THE TS'IN-DYNASTY. — THE GOLDEN YI. — THE HAN-DYNASTY. — THE LEAVE-COINS. — WEN-TI GRANTS THE PEOPLE TO CAST THEIR OWN COINS. — SPEECH OF KIA-I AGAINST FREE-COINING — PRACTICAL VIEW OF THE SAME QUESTION BY KIA-SAN. — KING-TI MAKES FALSE COINS. — REIGN OF WU-TI. — HIS FINANCIAL MEASURES. — REPRESENTATIVE MONEY OF SKIN-PARCELS AND WHITE METAL. — YIK TSEU COINS. — INSTITUTION OF ONE GENERAL STATE-MINT — EXCESS OF FALSE COINING UNDER YUEN-TI AND ADVICE GIVEN BY HIS MINISTER TO ABOLISH MONEY. — INFORMATION ON THE RELATIVE VALUE OF MONEY UNDER THE HAN-DYNASTY. — HISTORY OF WANG-MANG. — HIS REGENCY AND RE-ESTABLISHMENT OF THE CURRENCY OF THE ANCIENT KINGS. — HIS FOOLISH INSTITUTION OF SEVERAL VARIETIES OF REPRESENTATIVE CURRENCY. — HIS FALL, THE 5 TSU-COINS COME BACK. — SPEECH OF LIU-T'O ON THE DISADVANTAGE OF MAKING UNNECESSARY ALTERATIONS IN AN EXISTING CURRENCY. — DECLINE OF THE HAN-DYNASTY, THE COIN WITH THE FOUR OUTLETS. — BAD CURRENCY OF HLEN-TI. — END OF THE REIGN OF THE HAN-DYNASTY.

---

Other papers referring to money matters under the *Ts'eu*-dynasty do not exist. In his next historical record Ma-twan-lin passes a great many years when he brings us to the feudal state of *Ts'iu*, at the time that the last of the *Ts'eu*-emperors is about to be dethroned by his too mighty and independant vassal.

安。故王定安日。市孫便。爲幣楚而遂叔其市令叔皆大重。莊百姓令教處。亂言教去百更王姓復白行人於爲其姓以以乃如於不莫相。業。不小爲

"*Tsu tsuang-wang*<sup>1)</sup>; in order to make the money heavy, made the little coins equal in value to the great ones, but as this was not suitable to the people, they all left their business. *Sün-siok ngao*<sup>2)</sup> was (then) prime-minister. The market-master, speaking to the prime-minister, said: "The market is thrown into confusion, none of the people is quiet in its dwelling place, and trade is unstable". The prime-minister *Siok Ngao* reported it to the king, who gave order to return to the old state (of things), and the people were thereupon tranquillized."

In the year 221 B. C. the *Ts'us* were at last dethroned by prince *Tsing*, pretended son and heir to *Tsuang-siang-wang*<sup>1)</sup>, who now under the name of *Si-hoang-ti* (the first illustrious ruler<sup>3)</sup>始皇帝 put an end to the division of China into many feudal states, and united the whole empire under his sway. Now, when the *Ts'ins* had united the empire, there were two different sorts of currency. The gold coin called *Yi* was the first sort and had a weight and value, as a note observes, of 20 ounces or taels.

(二十兩爲鎰以鎰爲金之名數也)<sup>4)</sup>.

幣飾錫珠重錢銅  
寶之玉如文錢質  
臧<sup>5)</sup>屬其曰半如  
不爲貝文半如  
爲器銀而兩周

1) 楚莊王 = 莊襄王

who 250 B. C. ascended the Throne of China. Mayers I. 228.

2) Mayers I. 129. 3) Mayers I. 597.

4) In Mencius' time (B. C. 372—289) the *Yi* also was a current unit of value, as appears from two passages of his works. See Mencius B. I. 2th part,

The copper coins were in substance equal to those of the *Ts'eu* dynasty; the design was "half an ounce" and their weight was according to that design. But pearls, gems, tortoise shells, silver, tin and what further is connected with these, were used as

IX. 2. "There you have a gem which may be worth 10.000 *Yi*." And B. II. 2th part, III. 1., where mention is made of presents of so and so many *Yi* offered to Mencius by several princes. The Rev. Dr. Legge reckons it at a value of 24 taels, but from Ma-twan-lin we learn it was only 20.

5) 臧 is here used for 藏.

- implements, toys, and precious articles, hoarded up in treasuries, but they were no (more) money.

## THE HAN-DYNASTY.

The descendants of the first illustrious ruler who tried to secure the succession of his line during "a ten-thousand ages" by an atrocious and tyrannical policy, did not long enjoy the possession of "all territory under heaven." His son and grandson were murdered by intriguing eunuchs, and 14 years after the accession to the Throne, the *Ts'in* dynasty was extirpated, and "a soldat de fortune," *Liu-pang* 劉邦<sup>1)</sup> who made himself renowned in the revolution and struggle against the existing power, took his place and founded the great *Han*-dynasty which, during four centuries, was Master of the Empire. (204 B. C. — 190 A. D.)

匹萬躍。市之<sup>3)</sup>不周金鑄用。秦漢  
百鑄。米物民。軌之一莢又錢興  
金。馬至痛以逐制。斤錢<sup>2)</sup>。令重以  
至石騰稽<sup>4)</sup>利而復黃民難爲

As they judged the money of the *Ts'in* too heavy and inconvenient to be used, the *Hans*, in the first time of their rise, made the people cast, the *leave-coins*, so called, because they were as thin as elm-leaves<sup>2)</sup>, the gold coins were again of the size of a pound as under the *T'seu*. But those little copper coins were irregular (not of a size) and threw away all the benefit of the people. By the gathering and storing up of commodities, prices enhanced enormously. The price of rice increased to 10,000 *cash* a stone (picul) and a horse was sold for 100 gold-pieces.

1) Mayers I. 414.

2) 如榆莢也.

3) 之 = 其 Cf. Julien. Syntaxe Nouvelle I. p. 159. The construction is: 利 v. trans. to benefit, and 之民 its object. I have found a similar construction, Mat.

VIII. 7a. 逐爭其民 in the speech of the minister *Kia-I*. Cf. p. 35 note 2.  
N. B. here 其 is used instead of 之  
Julien, in loco gives a similar instance.

4) 稽貯滿也.

Accordingly, queen *Kao-heu* (185 B. C.) brought again in circulation pieces of 8 *Tsu* equal in value to the half-ounce coins of the preceding dynasty, but at the same time the profusion of elm-leaves remained in circulation, because it was impossible to draw them back.

Our chronicle is now fast approaching to the reign of the Emperor Wenti who during 22 years occupied the imperial seat, and is considered as a pattern of humanity, a prince, who in all he did, considered the weal of his people.

In the 5<sup>th</sup> year of his reign, Wenti caused again coins to be cast of 4 *Tsu*, the design was "half an ounce."

### 放錢除鑄使盜民鑄

With an intention to root out false coining,

he let the people free to cast their own money.

But this measure did not at all please his privy councilor and minister *Kia-I* who expected from it nothing but calamities to the government and the people; and his plea against free-coining which was delivered to the emperor, has always been considered as a masterpiece of sound reasoning. And whenever in later times the question arises anew whether it be better that money is made by the government or by the individual subjects, the opinion of *Kia-I*<sup>1)</sup>, is always brought forward as an irreversible proof that only the government is able to provide for good and valuable currency. And indeed, it is a remarkable piece, not only for its economical worth, but also as a specimen of Chinese eloquence, though we may find it somewhat too lengthy. As it contains also some interesting and curious Chinese expressions and constructions, I will give the fragment as I have found it in Ma-twan-lin. It runs as follows:

1) On *Kia-I*, see Mayers N°. 245, where the institutions of the state, and that some is said that he introduced many reforms in of his writings still exist.

## SPEECH OF KIA-I AGAINST FREE-COINING [Mat. VIII 5b].

○ 賈誼諫曰。法使天下公得顧租<sup>1)</sup>鑄銅錫爲錢。敢雜以鉛鐵爲他巧者其罪<sup>1)</sup>大。然鑄錢之情。非穀雜爲錢。則不可得贏。而穀之甚微。則利甚厚。夫事有召禍而法有起姦。今令細民人操造幣之勢。各隱屏而鑄作。因欲禁其厚利微姦。雖日報其勢不止。乃者民之所疑榜笞奔走者多。一縣百數。及吏衆。衆之所疑榜笞奔走者甚衆。夫縣法以誘民。使入陷罪。多者抵罪。少者受刑。夫縣法以誘民。使入陷罪。多者抵罪。少者受刑。

Kia-I remonstrancing (against the proposed measure) said: The law causes that it is granted to everyone in the empire to melt and cast copper and tin together in order to make money, but whosoever dares make false (coins) by alloying this mixture with lead and iron, shall have his crime branded in his face. But what concerns the circumstances of casting money, we know that he who does not mix it, and does not make false coins, will not be able to get any profit out of it, whereas he, who mixes it only in a slight degree, will get a large profit. By this fact, therefore, evil is summoned up, and this law will be the cause of crimes and debauchery. Since it is your command that the common people shall entirely have the power of making money in their own hands, everyone will secretly cast and make it. And though the punishments to be branded will be the daily penalty of this crime, in consequence of the desire (of the government) to check the making of large profit and the adulteration of the coin in a slight degree, the influence produced (by these punishments) will not be great enough to put down this evil. At this time the number of those who atone for that crime, will be large, — several hundreds in every district — and besides, the number of those who, suspected by the public functionaries, run away for fear of the bastinado, will be also very great. This law of the country leads the people astray, and will be the cause of their falling into a snare.

1) 得顧租 lit. to hire and to rent, | ged in. Or, as Ma-twan-lin observes in  
is here with the signification to be enga- | a note 顧租謂雇傭.

積孰積於此。曩禁鑄錢死罪下今公鑄錢黥罪積於此。曩禁鑄錢死罪  
用錢郡縣不同或用重錢平稱錢。不加若干或用輕錢。不受法錢不立吏急而壹稱  
能勝縱而弗呵乎。則力不之乎。則大爲煩苛。則力不能勝。縱而弗呵乎。則力不  
異用錢文大亂。苟非其未耜。術肆而采銅者日蕃。釋其未耜。術肆而采銅者日蕃。  
何鄉而可哉。今農事棄而冶鎔吹炭。姦錢日多。五穀耜。捐。術。肆。不爲多善人忧而姦邪愿。穀耜。捐。術。肆。

And what will more accumulate the number of crimes than this regulation? In former times, when the casting of money was prohibited, the guilty of death among the lower classes of the people were more frequent. But now that every one may cast money, the number of those condemned to be branded will greatly increase among the lower classes. But what advantage does the government derive from a measure like this? For the (different sorts) of money which will be used by the people in (different) provinces and districts, will not be of the same value. Some people will make use of light coins, (and if so) how much must they add to a hundred pieces<sup>3)</sup> (in order to pay other people who are measuring the value of a thing by heavy coins)? Other people (on the contrary) use heavy coins, and an adequate weight (quantity) of goods will not be obtained by them. Which of the different sorts of money (at the moment circulating), is legal tender is not evident<sup>4).</sup>

If the public functionaries are zealous and honest, they are greatly troublesome and vexatious, and yet their exertions will not be able to conquer the evil; if on the contrary, they are indulgent and not ardent in the pursuit, the people at market will make difference in the use of coins, and the different designs of the coins will cause great confusion. And if they too (the functionaries) are false in their dealings, pray, to what pass

1) Mat. explains this sentence by 言死罪多委積於下.

2) 平 is here more exclamative than interrogatory.

3) The meaning of the last sentence, rather difficult to understand, owing to its peculiar construction, is elucidated by the following note of Ma-twan-lin's: "If a coin has

the weight of 4 *Tsu*, 100 pieces of that legal money will weigh 1 pound 16 *Tsu*, and now is the question when the money in which the sum due is paid, is less in weight, how many pieces are to be added to a hundred in order to make the payment equivalent and complete." i. e. how many per cent is the difference?

4) Different sorts of coins of foregoing dynasties, e. g. the elm-leave-coins, the half ounce, 5 *Tsu* and 3 *Tsu* pieces were all still in circulation.

民陷而之刑戮。刑戮甚不詳。<sup>1)</sup> 知此，吏議必曰：禁之不得其術。其傷必重。令禁鑄錢，則其利深。盜鑄如雲，而錢必重。大禁如將起。棄市之罪，<sup>2)</sup>則數不勝而法禁數潰。銅使之然也。故銅禁致也。何謂七福？上收銅可今博禍可除。而七福博矣。勿令布，則民不鑄錢。驟

may we not be brought. At present husbandry runs the risk of decaying, and the number of people who seek to obtain copper, daily increases. They leave their ploughshares, they melt and cast, and blow the charcoal. The bad coins are daily made in larger quantities, while the five species of grain are not made to increase. The virtuous are led astray, whereas the wicked are respected; the people are falling into a snare, and the number of executions will be enormous and without judicial inquiry. What expedient will put an end to such a desolate state in the empire. If the functionaries who now advise you, knew that, they surely would say: Forbid it, forbid it, that these evil practices may cease, for the wounds inflicted by it are sore indeed! If your Majesty commands that henceforth the coining of money shall not be free, the money, no doubt, will become heavy again; and the advantages accruing therefrom will be important. But even the penalty of being outlawed by all the market-folks <sup>2)</sup>, will not be strong enough to check the false coiners, who have sprung up like clouds. The number of false coiners will not be conquered for, while the law prohibits their number to be large (lit. overflowing), the copper (which every one may easily obtain) is the cause that it will be so (i. e. that false coiners are still to be found <sup>3)</sup>). It would, therefore, be a great calamity, if copper was made to circulate all over the kingdom. That great calamity, however, may be warded off, and seven blessings will be the consequence of it.

1) In 之刑。之 = 其。

2) 棄市之罪 is the penalty of proscription by the votes of the people, according to the *Tsou-li*, 秋官 fol. 6b.

記所謂刑人于市與衆棄之也。It is what the histor-

ical records call the punishment inflicted on a person at market, when he is driven out by the multitude. Traduction du *Tsou-li* de M. E. Biot. Tome II. p. 322. § 26. "Il écoute la voix du peuple demandant l'exécution ou la grâce."

3) The meaning is that the circulation of copper will be the reason that the law is of no avail.

罪不積一矣。僞錢不蕃民不相疑二矣。采銅鑄作者反於耕田三矣。銅積歸於上。上挾銅積以御輕重。錢輕則以術斂之。重則以術散之。貨物必平。四矣。以作兵器以假貴臣。多少有制。用別貴賤五矣。以臨萬貨以調盈虛。以收奇羨。則官富

Which are then those seven blessings? If your Majesty draws back the copper, and prohibits its circulation, the people no more will cast money, and the sentences to be branded will not increase — this firstly — <sup>1)</sup>. The bad money not increasing in quantity, the people will no more suspect one another — this secondly. — Those, who at present try to get copper to melt and cast money, will again turn back to their ploughs and fields — this thirdly. — The copper will at last come to the crown again, the collected copper is then stored up in order to regulate the circulation of money (lit. to regulate light and heavy). Now, if the money is too light, (i. e. that it is so abundant, that weighed against goods it has little value, or as there is more currency than is wanted) the government has recourse to the expedient of collecting it. Is it (on the contrary) too heavy (i. e. is the currency circulating too scarce in proportion to what is required, and therefore heavy when weighed against goods) it has recourse to the expedient of diffusing it, and a stability in the prices of merchandise will be the result. — This fourthly. — By making implements of war (of this superfluous copper), (provided) the prince have excellent and honest ministers, the quantity of copper in store will have certain limits, if one uses to consider the rate of its market price <sup>3)</sup> — this fifthly. — In consequence of the reduc-

1) Here also the choice of 矣 as final particle is important. These blessings are no certain facts, but mere suppositions of the minister *Kia-I*.

2) 假 is used for 嘉, See Williams.

3) The meaning of this rather obscure sentence is, that the State may get some profit, when honest ministers will observe the course of the metal, and draw back the superfluous copper, when the copper currency is too abundant, and make of it implements of war, which are always highly valued. At the same time the effect of this will be that the government store of copper will have certain limits. Sinologues will be

aware how exceedingly difficult it is to render into plain English those brief Chinese phrases, which by a literal translation would be altogether unintelligible. For instance, the single words 輕 and 重 meaning light and heavy, want the explication, which in the translation I have put in parenthesis, otherwise the meaning would not be understood — 貴賤 dear and cheap, are to be taken as a compound, signifying, rate, course or market price, just as the compound 多少 means quantity.

不臣福功。福者故敵逐財六寶從誠而轉因善必爭以矣。而未傷行久敗禍爲懷其與制未之博退而天七民<sup>2</sup>。匈吾民上禍七爲爲下矣。則奴棄<sup>1</sup>)困

tion of the prices of all articles of commerce (as soon as the money has a fixed legal value), when the periods of abundance and scarcity are in due proportion, and the government will be rich and well-fed, in consequence of the obtaining of surplus and profits, the people will no more be exposed to want, — this sixthly — And if we destine our hoarded treasure, to be given to the *Hsiung nu* (the Huns), we shall put an end to the quarrels with that people, and our enemies will be brought to peace, — this seventhly. — Therefore he who governs the empire in such a way as to turn the existing evils into so many blessings, will do a meritorious work. Since many years the seven blessings have been opposed, and the evils have generally been predominant. Your ministers honesty is injured by it. His Majesty however did not follow the advice.

Besides, another peril was impending, as Ma-twan-lin tells us, in his next fragment. In the neighboring feudal States of *Wu* and *Tang*, the vassals were rather independent and made their own money, which caused uneasiness for two reasons. 1°. "That this currency, being of a better quality, might easily get an extensive circulation in the empire." 2°. "The wealth of those vassals was rapidly increasing by it, and as soon as it equaled that of his Majesty, it was evident that they would rise in rebellion. The emperor was, therefore, not quite at his ease, as to the result of his free-coining system, and again asked the advice of another minister of the crown, called *Kia-San*, who very practically decides the question as follows.

1) 棄 lit. pushed aside (as not needed). 2) As to the construction, compare page 29 note 3.

錢。後可共是令貴易也。者。諫。賈山土書  
 復禁鑄其不主之也。主富以器錢書  
 復長也。柄人貴。而無可用爲。  
 共操者。富人貴。以爲。

*Kia-san*, the superintendent of the issue of State papers<sup>1)</sup>), pleading against (the adopted measure) said: He, who considers the currency as an implement of no avail (as a prerogative of the crown), may occasion the change of riches; now riches are the handle, which is held by the rulers of men. If you let the people free to make (the money), it is much the same, as if they share the holding of that handle with the princes. That cannot last a long time. — Thereupon the emperor again forbade the people to cast money.

*Wen-ti*'s successor, the emperor *King-ti*, is said to have made money of false yellow metal, and by doing so, he infringed the laws of the market. But the people then made use of the money introduced by the feudal prince of *Tang* 鄧, and false coiners appeared, who beyond all limits practised their profession. Only a great many sentences were able to put a stop to their unlawful proceedings.

A more interesting part in the economical history of China is the reign of the next Emperor *Wu-ti*, who during 54 years occupied the throne. His was a glorious reign. He was victorious in his wars in the North-West against the formidable Huns; the whole South Western part of China, — the modern province of *Yün-nan* — was brought under the scepter of the Son of Heaven, and his generals carried the Chinese arms into the heart of Asia. Literature flourished, and an imperial University was established,

1) 土書 *Sang-sü* is probably the same as the frequently occurring 尚書 *Sang-sü*, which was a title of the prime ministers under the *Han*-dynasty; *Morr. in vore* 官 25—26). The compound in 上

is found only three or four times in Ma-twan-lin's records. Under *Han-wu-ti*, *Wen-ti*'s successor, 中書 is found as a title of a president of a central board of administration.

to disseminate the study of classical history and wisdom. The emperor himself made many a splendid progress with his gorgeous court, and gave magnificent feasts. The consequence of all those blessings was, that an enormous quantity of money was wanted, and as the base and worthless copper-cash, was not at all sufficient to pay for these sumptuous outlays, several sorts of representative currency were introduced.

This expedient had the same fatal result in China, as in so many other countries where it was afterwards employed. In the beginning, it seemed to be the cause of an inexhaustible source of wealth, but when the splendid times and the delusions had passed away, the State was almost on the verge of financial ruin.

*Wu-ti*, in the first year of his reign (140 B. C.) brought in circulation coins of a real value, bearing the design of three *tshu*, but five years later these coins were suppressed again, because they were counterfeited and clipped, and pieces of 5 *tshu*, the standard-money of the *Han*-dynasty, were introduced again.

Counterfeiting made the money abundant in quantity but of little value, whereas goods were not so superfluous and rather high in price (錢益多而輕物益少而貴); and in the distant parts of the empire, pieces of cloth were again used as a medium of exchange. Now the public officers proposed to abolish the existing pieces, which had a nominal value of half an ounce<sup>1)</sup>, but which really contained only 4 *tshu*, and to make again pieces of a weight of 5 *tshu*, furnished all around with a raised edge of the same substance (metal) in order to prevent the coins from being filed out, with a view of taking the copper dust. (鑄五銖。周郭其質令不得磨錢取鎔).

1) Half an ounce is 12 *Tshu*.

幣。金年。元及造狩皮白四 In the fourth year of the period *Yuen-šeu* (119 B. C.) a currency of white metal and deer-skin was made.

Ma-twan-lin quotes two pieces having reference to the introduction of that earliest of token-money, and as they contain remarkable particulars of the origin, value, and use of the deer-skin currency, I will give the whole text and its literal translation without any further comment. Only I wish to observe beforehand, that these skin-tallies were purely tokens, and have had nothing in common with the leather-money, which was, during a long time, current in Russia. This Russian skin-money had a truly representative character, as the parcels were used instead of the skins from which they were cut; the skins themselves being too bulky and heavy to be constantly carried backward and forward, only a little piece was cut off, to figure as a token of possession of the whole skin. The ownership of the skin was proved when the piece fitted in the hole.

Ma-twan-lin tells us: [VIII 8a].

造公是民家而或鑄<sup>2)</sup>穀財商大○  
錢卿天重之不累鬻數役賣空時  
幣議子困急佐萬鹽百貧或而縣  
以更與於黎公金財治轉滯富官<sup>1)</sup>

At that time the emperor's treasury was very empty, and among the rich merchants there were some who accumulated their wealth (riches) to succor the poor, they forwarded several hundreds of measures of grain, and converted (their riches) into food<sup>2)</sup>; there were others who (for their own profit) heaped up tens of thousands (pieces) of money, and who did not relieve the pressing want of the multitude. The black-

1) 縣官. is the Emperor. See *K'ang-hi's Dictionary in couplets*. 縣官 | 謂天子也。王者官天下。故曰縣官。

2) lit. they melted to food.

行。薦享。侯直以鹿聘皮司府有贍用。  
璧。必宗四績皮享。言多銀時。而禁苑。  
然後以室。十方為尺。今諸侯古錫。苑。  
得皮朝萬。皮緣白以者有少苑。

haired people were suffering great distress. It was then that the son of Heaven, together with all his ministers, deliberated to make again a currency in order to supply what was needed. Now it was forbidden to rear white stags in the parks, and in the privy treasury there was a mass of silver and tin. One of the functionaries observed (lit. spoke, saying). As to the skin-currency of the ancient kings, the feudal princes used to offer them as presents when they were invited to court. At present, you take pieces of the skins of white stags, measuring a square foot and embroidered on the hems, to make of them a skin-currency, of a value of 400,000 (copper coins a piece), (and) whenever kings, feudal princes, and noblemen of imperial clans, are come up to court to have an audience with his Majesty and to offer presents, they ought to receive those skin-pieces as badges of honor. Thereupon they will be brought in circulation (as they will always be desired by persons who wish to have an audience).

For those gifts of the emperor, the nobles who went to court, had to pay the fixed sum of 400,000 coins, as appears from the second fragment bearing on the subject. It runs as follows:

死奏稱萬。皮璧侯異。問白事。○  
異上本薦直朝對大鹿帝時。張  
腹不末反數賀。曰。司皮與湯  
腓<sup>1)</sup>悅。不四千。以今農幣。湯湯  
坐湯相十而蒼王顏以造用

When *T'sang-t'ang* was holding the office (i. e. was prime minister) and the Emperor, together with him (*T'ang*), instituted the currency of the white deer-skin, he also asked the opinion of *l-yen*, the minister of agriculture. The answer was: "to-day all the kings and feudal princes who are coming to a general levee at court (make) use of the azuro badges which have a value of (only) some thousands (coins). Instead of those badges, now the skins are presented to them, for which they

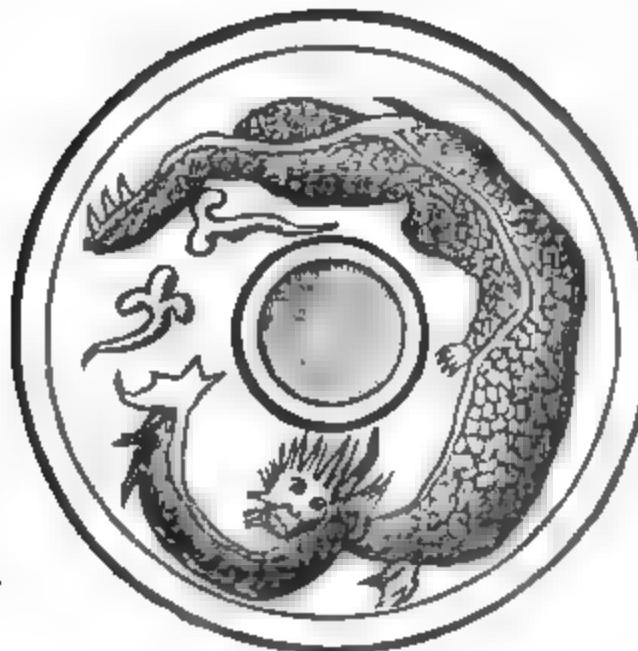

1) 腹腓 To hide in the innermost part of his belly.

have to pay in return 400,000 (coins). The origin and the end are not counterbalanced (i. e. the two obligations are beyond all proportion)." The sovereign was not pleased, and as T'ang, the minister, reported that I-(yen) was hiding his real meaning in his inmost heart, the emperor ordered him (Yen) to be put instantly to death.

Another representative currency instituted by Wu-ti consisted of three coins of a different size and form, made of tin and silver melted together, and of a nominal value far beyond the intrinsic. The outward forms and the figures with which they are covered, are symbolical. In an old Japanese mint-book I have found an illustration of a worn copy of two of them, and the French Jesuit Père du Halde in his work entitled »Description de l'Empire de la Chine" Tome II p. 166, gives also a drawing and description of them. As an illustration to the communications of Ma-twan-lin I have appended wood-cuts of these remarkable coins.

曰。莫如龍。天白又  
金如馬。地用金。造  
三龜。人用莫以銀  
品。故用莫如爲錫

Ma-twan-lin continues: (The emperor) made also a white metallic currency of a mixture of silver and tin, and considering that in Heaven there was nothing superior to the dragon, and on earth nothing superior to the horse, and among men nothing superior to the tortoise, he, therefore, said in reference to those three sorts of metallic coins. —

曰 圓 其 横。之 一 直 其 曰。三 文 重 千。龍。八 名 兩。

Of the first was said: It shall have a value of 8 ounces (taels); make it round; its devise shall be a dragon; its name shall be *T'uan*<sup>1)</sup>, and its value 3000 (coins).

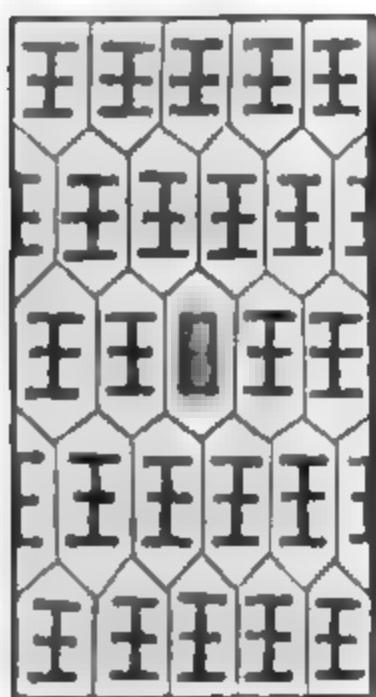

1) *T'uan* has the signification of regulator, a pattern.

五 方 二 日 以 重 差 小 直  
百。方之其文馬。500 (coins).

Of the second was said: Make it different and smaller (in comparison to the first mentioned), and of a square form, its devise shall be a horse; its value 500 (coins).

直 其 小 三    Of the third was said: Make it still smaller and of an oblong form, its devise shall be a tortoise and its value 300 (coins).

兩。三 重 兩 一  
重 六 則 重  
四 兩 二 八  
third 4 ounces.

While the weight of the first was eight ounces, that of the second was six, and that of the

From the drawing we see that the figure of the tortoise is not drawn on the third coin, but the surface of the coin reminds us of the back of a tortoise-shell with its sexangular figures. The character 王 Wang, meaning THE KING, is found on every sexagon, and seems a representation of the human being *par excellence*.

As to the symbolical part of these coins, Japanese and Chinese authors provide us with many explanations, of which we will give some without any comment. In a Japanese mint-book I have found the following passage "The round exterior form of coins is

1) It has, according to a note, the signification of oblong 下而長.

emblematical of heaven, whereas the square form of the inner hole is an imitation of the earth<sup>1</sup>).” The Chinese represents to himself the earth as a great square, and so he speaks of the 四方, the four sides, in the signification of all territory under heaven, and of the 四海, the four seas, as the universe, because the seas, in their turn, surround the earth. The firmament is a round operculiform covering over the earth.

The dragon, the emblem of imperial dignity, is composed of parts of several animals just as the Egyptian sphynx; one part of the year he dwells in the clouds, and another part of the year his residence is the ocean. It may be — but we advance this as a mere suggestion — that the dragon is the symbol of fertility and creative power, as it is associated with the watery principle of the atmosphere, and composed of parts of several animals; perhaps the sphynx, turning its back to the Libyan desert where all fertility ceases, has an identical signification.

The horse is emblematical of the earth, as the earth moves round the sun in twelve months and the pregnancy of the horse equally lasts 12 months. MEDHURST in voce 馬 says “*The time of its gestation is 12 months, hence taken to indicate the earth with its 12 months to a year.*”

The tortoise was anciently used in divinations. Further indications concerning the symbolic of dragon and tortoise are to be found in Mayers I no. 299. 451. Legge III p. 335 sqq.

The end of those glittering and medal-like coins was sad. They were counterfeited on a great scale, not only by the people, but also by the state officials. Their value in exchange diminished rapidly, and the people ceased to use them as objects of value; and though the emperor tried to avert the evil by no more issuing them, his efforts were of no avail, and at the end of

1) In a Chinese work the same is expressed by 內方象地外象天圓.

the year in which they were first coined, they did no more circulate.

Now, again a new kind of money was coined, which in the first time of its existence met with better fortune. The pieces were called *Yik-tseu* 赤仄 which literally means bended round, or surrounded with red; or as Ma-twan-lin describes it. “The raised edge of the coin was made of red copper. 以赤銅爲其郭也。One piece was worth 5 (probably 5 *tshu* pieces), 一當五。The functionaries who collected the taxes, used not to bring again the false *Yik-tseu*-coins in circulation. But only two廢。之民赤其 years had passed, and the new coin was不巧仄後 again very bad in consequence of coun便。法錢二 terfeiting, and as even the sensible people又用賤。歲。did not think it right to use the coins at the legal rate, they were also abolished.

Now *Wu-ti* having learned wisdom by adversity, found out the right principle, and money was made of a real value according to its design, and every province and district did not as formerly make its own money, but a state-mint was established in the capital of the Empire, and three high officials of the *Sang-lin*, (an Academy of science of that time)<sup>1)</sup>, were appointed mint-masters. They had to do their utmost effort in order to provide the whole empire with a good and valuable currency. To all money, not issued by the *Sang-lin* officers, the character of legal tender was denied. And all the metallic currency formerly in use was drawn back, and brought to the *Sang-lin*-mint in order to be melted and recoined, and as they considered it too expensive to destroy the few false coiners who still remained, they made

1) 上林 *Sang-lin*, the forest of science founded by *Wu-ti* of the *Han*-dynasty. Mayers I 592.  
superior men, was an Academy of

盜大唯 the most formidable and skilled of them workmen  
爲姦真 in the service of the state<sup>1</sup>).

之。乃工 With this account end the records of *Wu-ti's* reign.

For about forty years nothing remarkable seems to have happened. The 5 *Tsu* pieces, issued by the *Sang-lin* mint-masters, will, no doubt, have been very good during the first years, but counterfeiting was soon again in full vigor, and under the reign of the emperor *Yuen-ti* it seems to have been so frequently practised that a learned statesman presented a memorial to the Throne, in which he earnestly proposes to abolish metallic money and to go back again to the use of grain and cloth as a medium of exchange. That memorial, Ma-twan-lin's next fragment, runs as follows: [VIII, 9b].

姦者本心無錢多鑄耕十採禹元  
邪不逐動厭滿富陷民萬銅言帝  
不能末搖足室人刑坐人一鑄時。  
可半耕棄民猶藏者盜不歲錢貢

Under the reign of *Yuen-ti* (48—32 B. C.). *Kung-yü* says: "The number of persons who, in order to make money, are grasping at copper, amounts to 100.000 in the course of one year. The people cease to plough, and being engaged in false coining, they incur punishment. (Besides) many rich men accumulate money in treasuries, and are filling their dwellings with it, and yet they are not satisfied. The minds of the people are agitated<sup>2</sup>), they leave their present employment and throw away their prospects. (Husbandry) cannot afford to lose half of the hands that plough the field, and the false coiners are not to

1) However important many pieces of Ma-twan-lin may be with respect to the Chinese language, being necessarily confined to space, it is impossible for me to give the whole of the Chinese text. The remarkable expressions and curious constructions, however, will be carefully noted down at the foot of the page. In this fragment we have an expression which reminds us of a latin construction. 於是悉

禁郡國毋鑄錢. Thereupon it was generally forbidden in provinces and single parts of the empire to cast money. Interdictum erat ne funderent monetam.

2) We have here 本末 in another sense again. The origin is here the existing state, the present; the end means the future.

亦寸布爲農使以租賣之玉禁。  
寢。帛桑百姓稅爲官金銀。  
分裂。交易祿除毋鑄。禹議者復採。  
不可尺錢。一其賜。皆錢。販以珠。

be checked, (in their unlawful doings). It would be reasonable, therefore, to put an end to that grasping at riches (lit. pearls, jewels, gold and silver). If the officials who cast money, are henceforth prohibited to make currency, we may break with the practice of reckoning in commercial dealings the equivalent by cash<sup>1)</sup> (lit. in silverweight). If taxes, salaries and rewards, were all reckoned by means of silk, cloth and grain, the people would henceforth turn their thoughts on husbandry and the cultivation of mulberry trees."

Now, as for that advice to supersede<sup>2)</sup> in exchange the metallic money (by silk and grain, it is an inconvenience that) silk-pieces do not admit of being divided and torn to feet and inches (i. e. that sort of money had not the necessary quality of divisibility). The advice of (*Kung*) yü was also put aside).

難以改。以故古者今以錢易之。古者以龜貝爲貨。  
卒變易。爲行章下丹。可改。民以貨。  
以來錢。有丹。言幣。久。皆可上以。

if it were possible to alter it, *Tan* replied that it was possible. But the advice of the officers of the privy council of State was also asked, and they judged that it was difficult to make a sudden change in the money which for a long time had been in circulation.

From the days of the Emperor *Hiao-wu-ti* (117 B. C.) when the *Sang-lin* officers began to make money, till the year

1) A note says, 租銖 signifies: the reckoning of the price of an object sold; what one receives in return for (the object sold) in *Tze* and *Tsu* (in silverweight) —  $\Delta Tze = 6 Tsu$ .

2) 待 is most likely used instead of 代.

3) 章下有司 are the officers of the privy council of State.

億百成 1 A. D. under the Emperor *Ping-ti's* reign, they  
萬八錢 had made copper coins to an amount of more than  
餘。十二 280.000.000.000 pieces.

The next fragment contains an information on the relative value of money in the time of the *Han*-dynasty, collected from the historical records of that dynasty and communicated by an author who lived under the *Sung*-dynasty between A. D. 1000 and 1100, and who compares it with that of his own time. The author's pseudonym is 石林 *Ši-lin*, and of his family-name he is called 葉 *Ye*. He observes: "In the historical records of China, the chronicles of *Wang-kia*, it is related that in the time of the emperor *Yuen-ti* the treasury of the imperial palace amounted to 4.000.000.000, and the privy treasury contained 1.800.000.000 pieces of money; and he adds that that is  
之務足以 much. If you consider it in relation to the  
入盛以今 present time, it is not yet so much as is paid  
時當計 in one year in duties at a custom house, where  
一權之 a considerable import and export of wares  
歲貨不 takes place. In the time of the *Han*-dynasty,  
the money was very heavy, whereas the goods were light<sup>1)</sup>, and  
the prices of grain were very low, for they were only 5 *cash* a  
下是正戚故 bushel. Therefore says *Kia* (*Wan-kia* the  
戶今使貲嘉 author of the chronicles), that a man  
皆一有千言 possessing 10.000.000 *cash* enjoyed a life  
有萬千萬是 (lit. wealth) free from care, and few prin-  
之貫萬者。時 cipal officers did possess it, but it is also  
中亦少外 true that at present the average of middle-  
class and lower families possess that sum of 10,000 strings of cash.

1) Heavy and light are here in the signification explained at page 32.

According to the regulations of the *Han*-dynasty a prime minister and the military commanders-in-chief of cavalry and infantry 大司馬。大將軍 had a monthly income of 60.000 cash. Imperial historiographers and governors of provinces received 40.000. A commander-in-chief got, moreover, 350 bushels of rice monthly, and so it went on in a progressive ratio downwards, so that a public functionary of inferior rank got 100 stone (picul). There were also some who got 8 bushels and a little more monthly". In this way the author proceeds, and, as under the reign oft he *Sung*-dynasty, when Sik-lin of the family *Ye* lived, there was much money, but all commodities and provisions were scarce and dear, and the government sought to remedy the evil by introducing a new sort of money in large quantities, he ends with stating as his opinion that the value of goods does not depend on the quantity of money existing, but on several other circumstances. The high prices of provisions, therefore, will not fall by a sudden increase of the quantity of money. In plain words he says:

**狹不係蓋** "The quantity of money (necessary as an  
**也。在幣錢** equivalent to buy goods, i. e. the prices of com-  
**鼓之之** modities) and the value of goods do not depend  
**鑄輕多** on the larger or smaller quantities of money,  
**廣重寡** which are coined". From this sentence we see  
 how deeply Sik-lin was already convinced of the economical truth  
 that "INCREASING THE QUANTITY OF MONEY IS NOT AUGMENTING THE  
 WEALTH OF THE PEOPLE."

1) It is remarkable that the character *p'i* 貝 in this fragment, several times is taken in a signification contrary to what it commonly expresses: here it stands for goods, wares, whereas it generally signifies money, currency. In the beginning of this fragment a sentence, a common antithesis in Chinese

construction, shows that abnormality very plainly. 漢時錢極重而幣輕. In the *Han*-period the money was very heavy whereas wares were light (i. e. low) in value: See page 46, note 1. At the next page it occurs a third time

Now the same author proceeds to inform us how much that time the people used for their daily expenses.

如藝文多椎李帽言一夫治田百畝。畝收粟一石半。爲粟一百五十石。一夫五口。人月食一石半。百畝之入。以其十五石。稅九十石爲食。餘四十五石。錢三十。計錢千三百五十。而社石爲一粟。而聞嘗新春秋之祠。只用錢三百。而其餘錢以爲五口之衣。衣人一幣<sup>2)</sup>十。百。率輕。則固不嫌錢之少也。然王亦何至是。蓋日用猶不滿。使五百人終歲用十五錢。用錢三百。五人終歲用一千五百。不足四百。五人終歲用一千五十。不

As Li-huei the prime minister of Wen, the vassal of Wei, relates "One man manages a hundred *Meu* (acres) of land; the acre produces one picul and a half of rice, total 150 piculs; one family consists of 5 mouths<sup>1)</sup> and a man eats one picul and a half a month. On an acre of 100 acres a tax of 15 piculs is levied, and as a man uses 90 piculs for food, there remain 45 piculs. The picul has a value of 30 coins together (the 45 piculs) 1350 coins. For sacrifices to the tutelary gods in their hamlets, the autumnal offerings of first fruits and the offerings in the spring to their ancestors alone, they already use 300 coins, so the remaining money must find the 5 persons in clothes. For the cloth of one man 300 coins on an average are wanted, thus, at the end of the year, 5 men have used 1500 coins. But as there remained only a sum of 1050 coins, there were 450 short.

Hence you surely should not attribute it (this state of things) to the scarcity of money. For although the prince takes care that the prices of commodities are low (lit. light), how should he be able to make them thus low (i. e. how

1) Just the same what we reckon a family at in our statistical returns.

2) The sentence is not quite clear, owing to the signification of the word 做, which in this passage has again a meaning

opposite to that which it has common with other authors (See Note page 47). I shall be happy if any Sinologue will give another and better interpretation of these three objectionable sentences of Wang-H chronicles. [Mat. VIII 10a—11b].

would he be able to make them so low that they should be in proportion to the small sum which the common people can lay out). If they cannot even spend one *cush* daily, I don't know on what they live.

#### WANG-MANG THE USURPER.

*Wang-mang* was a nobleman of royal descent, living at the court of the Emperor *Tsing-ti* of the *Han*-dynasty (32—6. B. C.). He was generally esteemed by the court as well as by the people for his high accomplishments and noble conduct; but unfortunately an insatiable ambition was the main-spring of all his good actions. At the age of twenty-eight he was already Commander-in-chief of the army, and when the emperor came to die, he became regent during the minority of the hereditary prince.

Incited by his ruling passion, ambition, he thought of becoming emperor himself, and aided by the imperious dowager Empress, mother to the deceased emperor, he attained his object. The two children who successively occupied the throne for a short time, were destroyed by the intriguing court-party of which *Wang-mang* was the master-spirit; one was poisoned, and the other was relegated in a state of strict confinement.

Now *Wang-mang* himself mounted the imperial throne and brought distress and ruin down upon the country and the people by the mad way in which he governed the state. The changes and alterations he made in the currency, minutely recorded by *Ma-twan-lin*, are striking instances of his tyrannic government, and, as we shall see, the very money brought in circulation by him greatly contributed to accelerate his fall.

When Wang-mang acted as regent<sup>1)</sup>, he annulled the laws enacted by the Han-dynasty and reverted again to the methods of the T'seu-dynasty, the mother and child weighed in proportion to each other (See page 25). He also made again the pieces of King-wang of the T'seu of exactly the same dimensions and dimensions.

Besides he re-introduced the knife-shaped coins, and called them *Ki-tao* 契刀 and *Ts'o-tao* 錄刀. The former, probably meaning knives to make agreements or bonds, had an contrary value of 500 cash; the latter were called gilded knives because the characters engraved on these coins, denoting the name and value, were washed with gold 以黃金錯其文; their value was 50 cash.

Ma-twan-lin after giving a minute account of the dimensions of the several parts of these coins, tells us a difference between two scholars, one of whom asserts that those two knife-shaped coins of the same size did not answer the purpose, the gilded characters of the second sort being soon filed out and effaced by constant wear and tear, so that no difference whatever was to be seen between the two sorts. The other who writes about 800 years after the money was brought in circulation, maintains that this opinion is false, as still in his time there exist specimens of Wang-mang's knife-coins, which are uninjured both in design and form, consequently quite answering the purpose. — I suppose that this worthy scholar will have had a specimen carefully preserved in a cabinet of antiquities. There are some in the Musea at Leiden, London and St. Petersburg, but they show only the outer form of the coin<sup>2)</sup>.

1) lit. was dwelling in the regency 居攝.

2) M. DE CHAUDOIR in his Recueil de Monnaies de la Chine, etc. has two illustrations of *Ki-tao*, on which the

The ancient 5 *tšu* pieces still remained in circulation as long as *Wang-mang* was regent.

錢。之 作 刀。金 真。  
品。金 及 刀。以 以  
名。銀 五 乃 爲  
日 龜 鉢 罷 書  
寶 貝 錢 錄 劍

them precious merchandise and little money.

But when (*Wang*-)mang actually took possession of the imperial throne, and looking at the word 劍 saw that it was composed of the character 金 metal and 刀 knife<sup>1)</sup> he abolished all *ts'o-tao*, *kitao* and 5 *tšu* coins, and made several new sorts (of currency) of gold, silver, tortoise shells, cowries and copper *pu* (pieces imitating the shape of a dress. See page 4.), and he called

*Wang-mang*'s new currency consisted of 6 different copper coins, one gold-piece which, in imitation of the ancient rule of the *Tšeung*-dynasty was called 斤 *Kin* (pound) and had a value of 10.000 copper coins, and two silver coins of different value, the unit of which was a 流 *lieu*; both had a weight of eight taels, but the coin made of the silver found in the districts 朱 *Tšu* and 提 *S'i*<sup>2)</sup>, being of a better quality, was worth 1580, while that made of an inferior quality of silver, found elsewhere in the empire, was worth 1000 *cash*. Of tortoise shells, there were four different sorts of

acters denoting the value 五百 are engraved. This is in striking contradiction to the information of *Ts'ang-yen*, a Chinese author who lived before the eighth century of our era. In a description of these coins, he positively says: 其文左曰契右曰刀，無五百字也.

"Its mark on the left side is *Ki*, on the right side *Tao*, but they bear not the character 500 (denoting the value)". Now either M. DE CHAUVROIR's imagination has been too lively or the *Ki-tao*, he copied, were antiquities of recent origin. In the numismatical cabinet of the Leiden University I have recently found some specimens which are obviously false, as they are not in the least damaged. They

also bear the denomination of value, which *Ts'ang-yen* denies to them.

1) 劍 *Liu*, is the family-name of the *Han*-dynasty, founded by *Liu-pang* B. C. 195 [Mayers I N°. 414] and is composed of 金 metal and 刀 or 刂 knife and now the usurper feared that the metal-knives would keep the remembrance of the *Han*-dynasty alive in the hearts of the people. And as history informs us, he was not quite wrong in doing so, for a seditious little song the subject of which was the money of the *Han*-dynasty contributed ten years later to *Wang-mang*'s fall.

2) *Tšu* and *S'i* were parts of *Kien-wei* in *Sze-tchuen*. Ma-t'wan-lin gives this uncommon sound to 提 in one of his notes.

various size and denominations, which had an arbitrary valuation. Further 5 different sorts of shells or rather pairs of shells called 朋 *peng*, and finally 10 different sorts of 布 shaped coins, an illustration of which is to be found at the next page. In general the new currency consisted of 28 different sorts, made of 5 different substances and designated by 6 different denominations<sup>1</sup>).

But the people did not approve of this new currency, the metal not being pure and solid; they were all in a maze of doubt, 百姓憤亂, and after a short time they did not use the money any longer, but continued to employ again the 5 *tſu* pieces of the *Han*-dynasty.

敢 罪 道 失 爲 莽 患 之 下 詔 敢 挾 五 銖 錢 者  
稱 者。自 公 卿 大 夫 至 庶 人。不 抵 市。商 者  
坐 賣 買 田 宅 奴 婢 鑄 錢 於 農 商 者  
業。食 貨 俱 瘦。於 是 民 沸 泣 於 市。  
數。投 諸 四 裔。於是 農 商 者

(*Wang*-mang being alarmed at this state of things, issued a proclamation, (in which was said): that whoever ventured to hide the 5 *tſu* pieces in order to lead astray the multitude, should be banished to the remotest parts of the empire. Thereupon husbandmen and merchants lost their occupation, food and merchandise ceased to be produced, and the people in the market wept bitterly and were heart-broken. It is said that in this time no one durst determine the number of those, — noblemen, courtiers, and great officers as well as lower people — who as a punishment for their crimes of counterfeiting money, were condemned to be

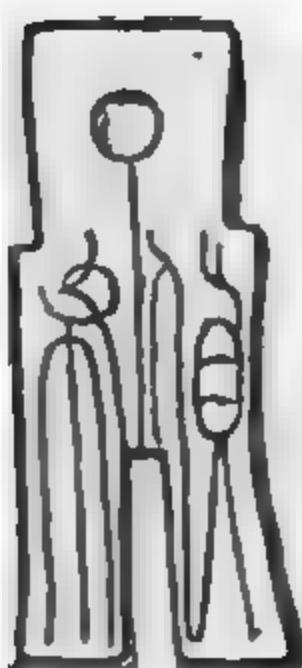

sold for slaves, to do house and fieldwork.

*Wang*-mang was aware that his people were suffering severe distress. He, therefore, again abolished all this new eccentric coinage, and only one "little copper piece" remained together with the suitable "great coins."

1. Only 5 substances because the 錢 and 布 were both made of copper.

In the year 14 A. D. he again brought in circulation some of the abolished copper coins, but made a slight alteration in the valuation. 頗增減其價直。

One of these coins was called 泉布 *ts'uen-pu*. Another of the same form is the piece called 貨布 *ho-pu*, a diagram of which is to be seen at page 4. It has been appended once more in order to enable the reader to follow Ma-twan-lin's description of the dimensions of the several parts of the coin, as he probably found them in the *Han-šu* (the Annals of the Han-dynasty). The copy has been taken from a Japanese work on the subject, which is generally very exact in its statements. I have only translated those informations on the proportionate dimensions leaving it to the amateurs to ascertain from it the measures in use under Wang-mang.

貨 貨 八 其 首 貨  
錢 左 分 圜 布  
二 日 間 好 長 八 長  
十 布 廣 徑 分 二 寸  
五 重 二 二 有 壯 二  
二 分 分 奇 二 分  
十 其 半 其 分  
五 文 足 廣 一  
銖 右 枝 八 一  
直 日 長 分 寸

"The *ho-pu* has a total length of 2,2 tsün (2 tsün and 2 fun<sup>1)</sup>) and is 1 tsün broad. The head has a length of 8 fun or a little more, and a width of 8 fun; the round hole has a diameter of 2 fun and  $\frac{1}{2}$  fun. The foot-branches are 8 fun long and the space(between the feet) is 2 fun; the design is at the right hand

*ho*, merchandise, and at the left hand *pu*, cloth, the weight is 25 tsü and the value 25 copper coins."

But the recent innovations did not gain the approbation of the people, and with new force they took to the temporarily inter-

<sup>1</sup>;  $1 \text{ fun} = 0.1 \text{ m.m.}$

rupted business of private coining. At first Wang-mang put to death all who violated the laws, but there were nevertheless so many false coiners that he began to feel alarmed.

貨欲好事者竊言王莽稱黃述  
言漢當復并天下。漢當復并天下。  
好言漢當復并天下。故稱白腹。五銖漢當復并天下。  
鑄傳送長安鍾官愁苦死  
者十六七時童謠曰  
黃牛白腹。五銖當復。腹。童謠曰  
相坐皆沒入郡國檻車鐵  
吏免官犯者愈衆。又五人  
罪。非沮寶貨民罷作一歲。  
者。與妻子沒爲官奴婢。吏布

He commuted his punishment and ordered that every false coiner with wife and children should be reduced to the condition of state-slaves, and the functionaries who were aware of the existence of (false coining) in the *Pi* and *Wu* sections (under their supervision)<sup>2)</sup> and did not betray them to the authority, incurred the same punishment, and those who did not stop the interdicted species current with the people were suspended in their offices, for the time of a year. The result was that the officials left their employment, and the number of those who acted against the laws was beyond all measure. As soon as 5 men were found together they were arrested and put in prison, and the prisoner-vans<sup>3)</sup> and iron fetters of all parts of the empire delivered their prisoners to the mint-master<sup>4)</sup> of *Tsang-ngan* (*Sing-nan fu*, the capital in that time). The number of those who daily suffered a painful death was very large (lit. 16 or 17).

Now at that time there was a seditious popular song:

"The imperial ox has a white belly  
The 5 *tsu* pieces ought to return."

1) 白 white is the color signifying evil, also that of mourning. BIOT translates in loco, page 461. Le boeuf sacré est gras.

2) 比 *Pi* and 伍 *Wu* are denomina-

tions of municipal sections or wards, instituted by the *Ts'en-li*. Cf. *Ts'en-li* I 256 n° 28.

3) lit. carts with cages on them.

4) 鍾官主鑄錢者.

The champions of the right cause expressed thereby in a covert way that Wang-mang was designated by the yellow (ox), and the explanation was, that they wished to put an end to his tyranny. That is the cause why they alluded to the white belly. The 5 *tſu* pieces were the currency of the *Han*-dynasty, and they meant by them that the *Han* ought to return, in order to unite the kingdom again.

In 23 A. D. the usurper Wang-mang was murdered and the descendants of the *Han*-dynasty again took possession of the ancestral throne under the name of the "Later or Eastern *Han*-dynasty."

#### THE EASTERN HAN-DYNASTY.

初王莽亂後。貨幣雜用布帛金粟。建武初。馬援在隴西。從公府奏以爲未可。事下三府。言宜如舊鑄。事遂寢。及援還。從公府求得前奏。乃隨牒還。天下賴其便。六年始行五銖錢。帝解難。十餘條。更具表言。世祖從之。釋。難。釋。難。十餘條。乃隨牒還。從公府奏。以爲未可。許。事遂寢。及援還。從公府求得前奏。

Shortly after the troubles occasioned by the bad government of Wang-mang, silk, cloth, metals, and rice, were used as currency. In the year 25 A. D. Ma-yuen who at that time was *Sang-su* in *Lung-si*<sup>3)</sup>, advanced his opinion that it would be reasonable to cast again as formerly the 5 *tſu* coins; the question was brought (lit. went down)<sup>4)</sup> before the *San-fu* (the mint-college) which, in a memorial to the throne, was of the opinion that it could not be granted, whereupon the affair

1) 釋 signifies to explain, to open out the meaning, and also to loosen.

2) 光武帝 is the 世祖 or founder of the Eastern *Han*-dynasty.

3) A district in the N. W. of China, prov. *Sen-si*.

4) 事下三府 is in the ori-

ginal text. I have omitted the full-stop and translated 事下, the affair went down to the *San-fu*; compare next page where the expression 事下四府 appears without the full-stop between the two first characters.

was abandoned (lit. was lain down to sleep), till *Ma-yuen* came back again, and tried to forward his former memorial to the imperial court, which however was very difficult as he had to send it ten consecutive times. Now, at last, his dispatches were opened and explained (unfolded), and his meanings were wholly made known. The Emperor followed his advice.

The founder of the new dynasty began in A. D. 40 to bring again in circulation the 5 *tshu* coins, and the whole empire enjoyed its blessings.

**不劉改桓便。陶鑄帝** Under the reign of the Emperor *Hwan-ti* (147—168) the advice was given to alter the money and to cast large coins. But as *Liu-t'ao* said that this measure would be impracticable, it was given up.

*Liu-t'ao*'s speech on that occasion is interesting, especially as his comparisons remind us of Mencius' manner of speaking. The following passage contains nearly the whole of it.

SPEECH OF LIU-T'AO.

○ 時有土書言  
人以貨輕財薄。  
府羣僚及太學四改  
鑄大錢事下。  
議曰。當今之憂。上  
能言之士陶上

年無貨。故食不可。  
朝有饑。故食不爲。  
達農殖之本。多不爲。  
至急也。議者不爲。  
農殖之本。多不爲。

At that time there was a *Sang-shu* who maintained that the people were impoverished and in want, because the currency was too light and thin, which ought to be mended by casting great coins. The proposition went down to be deliberated on by the mint-college (lit. college of four mint masters). It was then that the very learned and eloquent scholar *Liu(Tao)*, coming to the court, in order to give his advice, said. "The distress of the present times does not take its origin in the currency but in the fact that the people are suffering from famine, for the people may live a hundred years without a currency, but without food they cannot exist a single day, and therefore food is (at present) of the utmost necessity. Your councilors do not comprehend the first requi-

言治鑄之便。故欲

site of agriculture. The frequent talking of the benefits of melting and casting (money) is because they are desirous of an opportunity to bring false coins in circulation, and in this way<sup>1</sup>) to capture the benefits which the soil yields, but as soon as those benefits are totally exhausted, those who appropriated them, will quarrel and fight. If you wish your people to live in a flourishing state and to increase in wealth, it is necessary, that they should be in a condition, in which they can quietly perform their duties, and are prevented from hankering after large profits; only then the people will enjoy a state of competence without care and troubles. As to the desire of your Majesty to cast money and to arrange the currency in order to repair its present vicious state, it is just the same as if you would rear a fish in a caldron with boiling water, or roost a bird on a hot fire. Water and wood are essential for the life of fish and birds. But in using them in a wrong way<sup>2</sup>), you will surely cause (the bird) to be scorched and (the fish) to be cooked to shreds. Thereupon the emperor abandoned his purpose and the large coins were not cast.

We now approach to the end of the great *Han*-dynasty and Ma-twau-lin's informations regarding the last two emperors are of little economical value. There are, however, few places where the Chinese text is so difficult to understand as in the following piece which refers to the money of the emperor *Ling-ti*, who reigned 168—190 A. D.

1) 以 = 是以.

2, 不時 has here another signification as in the passage quoted from the *Tao-ti* See p. 22. It rather means here 菲時, the wrong, the improper

time See for the different meanings of  
**不時** 無時 and **非時**,  
J. J. HOFFMANN, Japanese Grammar.

布京師亂道。錢而此已識

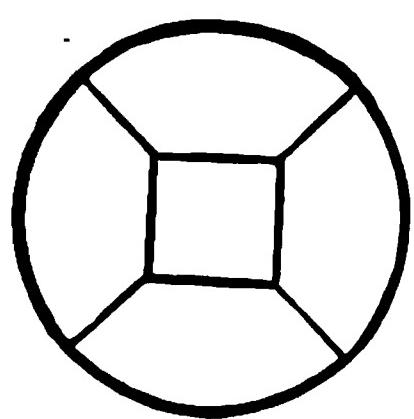

those who knew it, was that whenever extravagance and oppression were too heavy, the figure of those coins would be a prognostic from which it appeared that this money would have 4 ways to escape. And as the revolution broke out in the capital, that money did indeed stream and diffuse itself over the whole empire.

The following explanations of the just quoted fragment will, I hope, prove an acceptable digression to such of my readers as are students of the Chinese language. Ma-twan-lin is sometimes very obscure, and a great many difficulties are often to be surmounted before his meaning is thoroughly understood. 亂 is a character not to be met with in any Chinese dictionary. I first took it for 乖 to which it has a strong resemblance, but when I found the same character a second time in Mat. IX. 3a, it was at once clear to me that in both places it stands for 兆, which has the meaning of 1° a prognostic; omen, 2° a million. — I came to that conclusion in the following way: The second passage, Mat. IX. 3 runs 韓愈拜京兆尹. *Han-yü* was appointed Governor-General of the capital. The official title 京兆尹 ruler of the millions of the capital is often met with in history, (Morr. *in voce* 官 no. 130) and the *Han-yü* in question was according to history indeed called 京兆尹 (de Mailla-*Hist. Gén. d. l. Chine* Vol. VI p. 439). Comparing the two passages of Ma-twan-lin, it is evident that 亂 is used for 兆, and that in the above quoted sentence, 兆 has the signification of prognostic, omen.

In the third year of the period *Tšung-ping* (186 A. D.) the emperor *Ling-ti* had coins cast with the design of the four outlets.

This money had on the reverse four ways (issues), the covert meaning of which, according to the saying of

皆 stands for 背 the reverse of the coin, as is evident from a passage in a Japanese book treating of the same coins 此錢今世尙アリ字ジ畫ヲ明キ澈ニ背文四出。“On those coins on which the strokes of the characters are still visible, we plainly see on the reverse four outlets” — and that is the reason why that money is commonly called the money with the corners. 俗ニコレヲ角錢ト云フ。

If we look at the subjoined illustration of the reverse of the coin, Ma-twan-lin's meaning is quite clear. The four little strokes from the corners of the hole to the outer edge are the four outlets spoken of. — Biot in loco p. 439 writes “l'Empereur *Ling-ti* fit fondre quatre espèces de pieces nouvelles. L'une d'elle se voit dans la Muséo de *Kien-long*”. — We see how far he was from the right tract and was led astray, 1°. by the wrong character 皆 which made him take the object as a plural, 2°. by not knowing the meaning of 四出, and 3°. because the monogram 飛廉 was not explained. This passage may serve as an instance of the many difficulties which Chinese authors may cause us by using incorrect and wrong characters.

The emperor *Hien-ti* tried in the first year of his reign to improve the money, and establish it on another basis in consequence of which he suppressed the 5 *tsu* pieces and had little coins cast. In order to obtain the necessary quantity of copper, he confiscated copper statues, figures of the *Fei-lien* 1), and many other objects made of copper. The money, however, was without governing principle,

1) *Fei-lien* 飛廉 is the poetical name of 風伯 the ruler of the winds. According to the “Rites of the *Ts'en*-dynasty”, sacrifices were offered to him. Cf. Mayers I. 137.

the design was badly made, and it was not convenient to the people in daily use.

These few lines would suffice to get an insight into the political history of that time. They are so many instances of mis-government and arbitrariness. Already during the reign of the Emperor *Ling-ti* the imperial authority had been undermined by eunuchs and designing courtiers, and the time of the fall of the *Han*-dynasty was near. The emperor *Hien-ti* was to act the principal part in a drama that scores of times afterwards in all parts of the world would be represented by demoralized monarchs and their ambitious ministers. The leading personages are well known — a weak and effeminate prince and a major-domo who usurps the powers of the state and stirs the people to revolt, in order to dethrone his master and take his place. So also here. The Generalissimo *Ts'ao-ts'ao*, to whom the emperor had gradually deputed all his authority, abuses his power and involves China into a civil war. A descendant of the ancient *Han*-dynasty gains a battle over that general, conquers Western China, and assumes the title of Emperor, as the representative of the legitimate line. *Ts'ao-ts'ao* himself established his residence in the North and called himself king of *Wei*, but after his death his son also assumes the title of Emperor of China.

Finally, one of *Ts'ao-ts'ao*'s former officers takes arms against the usurper and becomes the rival of his master. After much slaughter and bloodshed he succeeds in establishing himself in the county called *Wu*, south of the *Kiang*, where he also assumes the title of emperor. Hence it is that in Chinese history we read of the three kingdoms, viz. *So*, *Wei* and *Wu*.

---

## CHAPTER III.

### HISTORY OF THE MONEY DURING THE PERIODS OF DIVISION OF THE EMPIRE.

THE THREE KINGDOMS. — THE TSIN-DYNASTY RE-UNITES THE EMPIRE. — HWAN-HUEN PROPOSES TO ABOLISH THE MONEY. — SPEECH OF THE PRIVY COUNCILOR KUNG-LIN AGAINST THAT PLAN. — THE SAME QUESTION DISCUSSED IN ANOTHER PART OF THE COUNTRY. — DIVISION OF THE EMPIRE INTO NORTH AND SOUTH. — THE SOUTHERN EMPIRE, THE SUNG-DYNASTY. — A SESSION OF THE PRIVY COUNCIL AND ADVICE NOT TO COIN TOO LIGHT PIECES. — WRETCHED CONDITION OF THE CURRENCY DURING THE REIGN OF THE "DEPOSED EMPEROR." — VIEW OF THE POLITICAL EVENTS BY WHICH THE FOUR SUBSEQUENT DYNASTIES ROSE AND FELL. — ADMIRABLE SPEECH OF A MINISTER ON THE NECESSITY THAT MONEY SHOULD HAVE A REAL VALUE AND BE PERFECTLY COINED. — THE LIANG-DYNASTY. — INSTITUTION OF IRON MONEY; ITS FAILURE. — THE TS'AN-DYNASTY. — THE NORTHERN EMPIRE. — THE WEI-DYNASTY. — MONEY IS NOT USED AT ALL, THE PEOPLE ENFORCED TO USE IT. — DISCUSSIONS ON THE INSTITUTION OF A NEW CURRENCY. — NORTHERN TSI-DYNASTY. — ASSISEMENT INTRODUCED — GOLD AND SILVER MONEY OF THE FAR WEST. — THE SUI-DYNASTY RE-UNITES THE EMPIRE. — UNAVAILING MEASURES TO INTRODUCE A BETTER CURRENCY. — MONEY SUPERSEDED BY OTHER OBJECTS. — END OF THE SUI-DYNASTY.

---

Ma-twan-lin's informations as to the transactions of this period confine themselves to the measures taken by the three emperors, after they had founded their empires, and were sufficiently at leisure to think of the interests of their subjects. He first treats of the money introduced into the land of Šo, the present province of Sze-ſhuen, by the representative of the ancient imperial line, who after having conquered this country had established the seat of his government in I-tſen, then the capital of that part of China.

昭烈○先主<sup>1)</sup>取蜀。劉鑄衆約若事定，府庫百錢。  
 都士庶皆捨干戈及入成。劉巴曰：「此不足備，憂之。」西曹掾劉璋曰：「此易耳。西曹掾但用諸物，軍用亦當足。」劉巴曰：「此直百錢也。」平諸物價，當充庫直百錢。自月之始，從之有勒，爲五銖者<sup>2)</sup>。直百間，則庫充實矣。」

As *Tsao-li* had seized on the land of *So*, he caused coins to be cast of a nominal value of 100. During the struggle of *Sien-tsü*<sup>1)</sup> for the scepter of the *Han* (lit. of *Liu* = *Liu-pang*) he had agreed with his officers and soldiers that whenever the affair was decided, the public treasuries should not be plundered, the people being unprotected; but no sooner had they entered the capital, than all of them, officers as well as soldiers, threw away their shields and spears, and hastened to the treasuries where they made themselves master of all the valuable objects. For the wants of the army was not even left enough, and (*Liu-pei*<sup>1)</sup> was greatly concerned at this.—*Liu-pa*, the governor of *Si-tsao* said. — This evil is easily remedied, you have only to cast coins which have a value of 100 others and you will make the prices of all commodities on a level. (*Liu-pei* followed that advice and within ten months the treasuries were filled (with money), the design of which was "Value 100". Also they happened to be made and engraved as the 5 *tsü* pieces<sup>2)</sup>).

Secondly our author gives us some information on the economical condition of the medium of exchange in the northern kingdom of *Wei*, where the son of the generalissimo *Tsao-ts'ao* under the name of *Wen-ti* had assumed the title of Emperor, 220 A. D.

1) By 先主 the first ruler 劉備. *Liu-pei*, afterwards the emperor 烈 of 蜀 is designated. In this little fragment the three different names are alternately used. See Mayers I. N°. 415 j<sup>2</sup>. N°. 88.

2) The meaning of this phrase is explained in *Kin ku-t'suen-ho-kien* Vol. I p. 12a. (a work already quoted. See p. 24.

Note 3. where we read that the form of the 直百 perfectly resembled that of the 五銖 of the *Han*-dynasty, and that they even happened to be engraved with the very characters on them, but in reversed order, the 五 being placed at the right instead of at the left side and the 銖 at the left instead of at the right.

He introduced a currency of articles of consumption, as grain, rice, etc., but after a short time it was clearly proved to be unsuitable. The fragment is remarkable for this reason that the arguments against the fitness of the use of these commodities as a medium of exchange are the same as those which we find in economists of our time, as Mr. STANLEY JEVONS, and Prof. SUMNER, in his work "A history of American currency<sup>1)</sup>." It runs as follows:

乃錢省錢馬以薄競<sup>2)</sup>久帝以罷魏文帝  
立於刑非芝等刑濕人間世廢五銖帝黃  
五是若徒豐議不穀以巧錢。使初  
銖爲更鑄國以能市要穀市。使初  
錢便鑄國亦爲禁雖利漸用至百二  
明五銖以用司處作多既明姓年。  
帝銖以用司處作多既明姓年。

In the second year of the period *Hwang-tsu* (221 A. D.) *Wei wen-ti* abolished the 5 *tshu* pieces and ordered the people to market by means of grain and silks. Up to the time of the Emperor *Ming-ti* the money remained abolished, and during that time grain was used as such. But the cunning and false among the people gradually brought a large quantity moist grain to market with a view of making a larger profit, and they made a thin and sleazy silk to market with it. Although severe punishments were inflicted, the evil practice could not be checked. *Sze-ma-tsi*, (the first general and minister at the court of *Wei*), and others gave the advice, that according to their opinion the use of money would not only enrich the country but also lead to a decrease in the number of sentences. When the 5 *tshu* pieces were cast again, it would, moreover, be convenient. Thereupon the emperor *Ming-ti* introduced the 5 *tshu* pieces again.

*Sün-K'ien* 孫權<sup>3)</sup>, the monarch of the third empire of *Wu*, who did not take the title of emperor before the year 229 A. D.,

1) JEVONS. "Money and Mechanism of Exchange," p. 25-36. SUMNER p. 7

2) 競 is here used for 競

3) On *Sün-K'ien* See Mayers I No. 632

introduced in the year 236 the so-called large coins one piece of which had a nominal value of 500, and two years later he made money of a nominal value of 1000 copper pieces.

平私爲不人錢卑家器以間既其有物爲患太直者官便之貴勿並省權但有所輸出之空枉藏也鑄姓名

That money was very dear but it had but an empty name, (the intrinsic value being in no proportion to the nominal). This raised the discontent of the people. On hearing that his people considered this currency as unsuitable, (*Sün-K'üen* diminished (the circulating quantity) and discontinued (further to make) it. He ordered it to be melted for implements. The functionaries (who had received it) did not issue it again, and such private persons as wished to get rid of it took it to the treasury where it was exchanged at a proportional or a somewhat lower rate; and it did not happen that any one was treated in an unreasonable way.

*Cetera desunt* and the next fragment informs us of the monetary system of the emperors of the *Tsin*-dynasty who re-united the three empires under their sway, after a separate existence of above 50 years.

The better to understand what follows, we have given a concise view of the political events which brought about the re-union of three kingdoms.

A minister at the court of *Wei*, the most northern of the three states into which China was divided, had conquered the western kingdom of *Šo* and driven away the last descendant of the great *Han*-dynasty. This minister himself was a descendant of the vassals of *Tsin* who reigned in ancient times, when the empire was divided into different almost independent kingdoms. To reward him for his services the emperor bestowed on him the title of *King of Tsin* 晉王. The son and successor of this minister usurped the throne and was the founder of the 晉 *Tsin*-dynasty.

265 A. D. His great ambition was to consolidate the whole of China to one kingdom as it was under the *Han* and with this object in view he conquered in the first years of his reign the southern kingdom of *Wu*.

Ma-twan-lin's account of the money of the new dynasty could not be shorter. "The *Tsin* used the same money as the *Wei*-dynasty, and I have not heard that afterwards money was introduced, which bore a characteristic of being made by that dynasty."

Without saying any more he passes to the year 317, and says: "When the emperor *Yuen-ti* had crossed the river, he used the old money of *Sün*." 元帝過江。用孫氏舊錢。 This passage too requires a short historical elucidation.

*Min-ti*, the fourth emperor of the *Tsin*-dynasty, was besieged in his capital *Ts'ang-ngan* 長安 by a Tartar prince from the North. The town being taken he was led away a prisoner, and had to suffer many humiliations, as to serve the prince at table, to walk before his horse as he went out hunting, etc., and when some faithful but rash followers of that unfortunate emperor, indignant at such treatment, marched their armies to the north in order to release their sovereign, the Tartar prince caused him immediately to be put to death. After the capture of *Ts'ang-ngan*, a relation to the *Tsin* family repaired with a great many followers to *Kien-k'ang* 建康 (the present *Nanking*) on the right bank of the *Yang-tsze-kiang*, and had himself proclaimed emperor under the title of *Yuen-ti*, as soon as the death of the emperor *Min-ti* was ascertained. *Kien-k'ang* was the capital of *Wu* at the time when it was a separate kingdom, and when *Yuen-ti* came there the currency introduced by *Sün-k'ien*, the founder of that kingdom, was still in circulation. Ma-twan-lin

tells us that the emperor *Yuen-ti*, after having crossed the river (i. e. the *Yang-tsze-kiang*), did not alter or change the circulating medium. We omit the uninteresting account of the various denominations and sizes of that money, but merely state, that in spite of all the good cares and precautions of the humane and amiable prince, the money at last circulated in no sufficient quantity, and consequently became dearer and dearer when it was weighed against commodities. Equally uninteresting is the following passage — moreover rendered obscure by the use of a wrong character<sup>1)</sup> — in which we are told that the emperor *Hiao-wu-ti* issued a proclamation prohibiting the export of copper which speculators carried to the barbarous tribes of *Kwan-tšeü*, who made drums of it, and paid high prices for it. For says the emperor in his proclamation "money is the most important treasure of the country." 錢國之重寶。

And now we have come again to a part, in every respect worthy of our interest. It is a plea, delivered in the privy council assembled at court, important in an economical point of view as well as on account of the curious language, construction and historical details.

食政。洪之○可。以帛。錢議立。興安次。貨範義孔乃爲。朝用欲輔中。帝豈爲八日。琳止。不議穀廢政。桓元

In the reign of the emperor *Ngan-ti*, in the period *Yuen-hing* (402) the advice and desire of *Hwan-hiu'en*, who at that time was (still) attached to the government (as governor of a province<sup>2)</sup>), was to abolish the money and to employ grain and silks (as a medium of exchange).

1) Chinese students who may happen to read Ma-twan-lin's text, will easily observe that the wrong character spoken of is 意.

I should wish to supersede it by 息; the meaning of the sentence would then be plain.

2) *Hwan hieu'en* soon after became a rebel

and after having conquered a great part of the empire and dethroned the emperor, was defeated by one of the faithful generals of *Ngai-ti*. — 輔 means to join, to help, 政 the government. — 宰輔 is a cabinet minister.

 之。故。何。務。農。業。則。姓。要。所。

The council assembled at court were however of opinion that this could not be, and thereupon the matter was dropped.

Kung-lin's advice (on this occasion) was: In the Great Plan, the part treating of the eight Objects of Government<sup>1)</sup> the commodities are second in rank to food (i. e. commodities rank second while food is the first among the objects of government). Who then shall not exchange for it (money) the wealth he possesses, as it is of the first necessity in daily use?

If the people are induced to occupy their (best) strength in making money, this interferes with the exercise of the trade by which they ought to live. To oppose this is allowed. At present the husbandman applies himself, heart and soul, to (the cultivation of) grain, the mechanic to his tools, and every one to what pertains to his trade. And where has it been seen that they have devoted their energy to money? For this reason wise princes always took care that a merchandise without utility of itself, was employed to circulate as a treasure which had a utility<sup>2)</sup>. The facts that destruction of wealth arising from putrefaction and tearing did not occur, and that the damages caused by the continual passing from one hand to another were slight, were the reasons

1) *Huang-fan* "The great plan", is a chapter of the *Ssu-king*. (Part V, B IV).

**八政** "The eight objects of government". See Legge, Shoo-king page 327. Kung-lin means by this that in the ancient times of the Sung-dynasty, the currency was already of so much importance to men that among the eight objects of government it ranked next to food, which was first in rank.

2) Utility is here, what is necessary to meet our requirements of daily life. A man can very well live without making use of the metal of which money is made, but without food, he can't go a single day. This again is what our Chinese Economist wants to express by his 用 and 不用之貨. By making use of an ob-

ject of first necessity as grain, to supply the want of a medium of exchange, you are diminishing the store which ought only be to used for food. Therefore it was a benefit to the people when the wise rulers of antiquity took care that a medium of exchange was made of a material which was of no strict necessity in the requirements of life. The argument was quite right in a country so densely peopled as China, where all that was produced by the soil was consumed by the inhabitants or put in store for coming times of distress. Cf. Matw. IX, 37a. The same idea is expressed by

**反以天下有用之物爲無用。** in the case mention is made of the adoption of grain as a medium of exchange.

that the successive dynasties did not think it right to abolish the copper money which succeeded to the suitable tortoise shells and cowries (the primitive medium of exchange)<sup>1)</sup>. Grain and silks are the materials by means of which clothing and food are procured, now when they are torn to pieces to be employed as a medium of exchange, those silks will get damaged in no slight degree, and in the hands of the merchants it (the grain) will get spoiled, and by (being so) torn up and divided (both) will diminish in value, and finally be destroyed, and this might be called to draw upon one's self a wretched condition while one saw it with open eyes. It was therefore, that the mint-master Yü said that cunning people and cheats immoderately moistened the grain to make profit by it, and fabricated a thin and sleazy silk in order to increase their riches.

Under the Wei-dynasty (it was tried) to restrain (such offenders) by severe punishments; yet the evil could not be sufficiently checked. For this reason it was that Sze-ma-tsi thought that by employing money again, the country would not only prosper but the number of punishments would greatly decrease.

The non-employment of money has sometimes been the result of the confusion of war. The fact that (money) which had been long in use, has been drawn back with a view to abolish it, has also occurred, among others at the close of the Han-dynasty. But if the money is

1) Without the rhetorical inversion the phrase would run as follows.

歷代不可廢錢。所以嗣功龜貝。以其既無毀敗之

費。又無省運致之苦。  
—。嗣 Jap. ツグ。カサ子ル, is to heap the one on the other, to succeed, to continue.  
— 功 adjective attributive of 龜貝.

廢之。則百姓頓亡其利。今度天下之穀。以周天下之食。既或倉庫充溢。或糧靡斗儲。相資通。則貧者仰富。致之便。之棄物。是有錢無糧之人。皆坐而饑困。因此斷之。又立弊也。用據今用錢之處。不爲貧。又人習來久。用之怨惑。語曰。利不百不易。况又錢便於穀也。魏明帝。乃舉朝大議。精才達政。便時業。革穀且坐爲之。既廢用穀四十年矣。以不昜人。乃舉朝大議。精才達政。便時業。革穀且坐爲之。既

abolished now, after it has been in circulation, the people will suddenly lose all their profit. As till now the grain (produced) in the empire was weighed in order to circulate as food for the whole empire, some store-houses are overflowing, while the store-houses of others do not contain a single measure of provisions. Now if this is to circulate as currency, the poor will be entirely dependent (lit. will have to look up to) on the rich. Such a manner of acting is moreover wrong in relation to the existing copper money. If it is abolished all at once (lit. at a single morning), you cause the articles (which till now were money), to be put aside, and this again causes the people who have money but no stores of grain, to be in want and distress. Besides, the abolition will also give rise to trouble and mischief. It is moreover a convincing proof (against the proposed measure) that in the districts where at present money (as a medium of exchange) is used, no poverty prevails, while in places where grain is used there is no wealth. Also have the people long since learned to suspect and dislike sudden changes. The proverb says: "When the profits do not amount to 100 per cent, I do not throw up (lit. change) my employment." Finally, money is also much more convenient than grain. In the time of the emperor Ming-ti of Wei (227—240 A. D.) the copper money was abolished and grain was used (as a medium of exchange), I believe<sup>1</sup>), for forty years. As it proved to be inconvenient to the people, a great council was assembled at court. Of all the superior talents and eminent scholars who informed the government of their advice, there was not one who was not of opinion that the use of money should be reverted

1) Cf. St. Julien. Syntaxe Nouvelle I, p. 80. 2) 矣.

之士莫不以爲異論。復用朝錢，下以無異情。彼尚朝錢，莫不行。之謂於穀帛而用穀帛，捨錢已故議取救也。弊足以明，而著於朝錢，則琳<sup>1)</sup>錢術。同廢之也。

to again. On the side of the people there was a general desire of it, and at the court the majority pleaded for it. The fact that all those wished to do away with grain and silks, and again to introduce the copper money (as a medium of exchange) is sufficient to set forth the unsuitableness of grain and silks. Agreeably to that precept of warning we must act. It would be stupid to say this unsuitableness might be made up by an artifice; better it is not to proceed to the abolishment of the money. The council assembled at court for the greater part agreed to (*Kung*)-lin's opinion and so it happened that *Hwan-huen*'s advice was not followed.

The views and arguments of the following speech fully coincide with those of the preceding. Hence we have followed Matwan-lin's example and inserted it after the plea of *Lin*.

遂河晉通制之穀幣以於軍軌。○  
不西太易五耗。帛爲金軌索太前  
不用荒始不銖二量貨。貝曰輔。府涼  
錢廢中滯錢。漢度息皮古言參張

In the presence of *Ts'ang-kuei*, the Governor of the province of *Liang-ts'eu*, the officer of public administration *So-fu*, speaking said to him. (lit. to [*Ts'ang*]-*kuei*). "The ancients employed gold, shells, and skin-parcels as medium of exchange, and put an end to the spoiling of grain and silks by the constant weighing and measuring. The two *Han*-dynasties caused the 5 *tshu* pieces to be made and trade was not trammeled by it.

1) 琳之 = 琳之議.

2) 涼 *Liang* was a province in the remotest corner of the N. W. of the empire. *Ts'ang-kuei* is probably one of the governors who at the decline of the *Tsin*-dyn. made themselves independent. On a Chinese map of the empire during the division into N. and S., on the spot where the province of

*Liang* is situated, the sentence is found *Ts'ang-kuei* occupied it 據之。 Cf. Matw. VIII 37a where of *Si-sze-ming* another rebel, who conquered part of the empire is also said 據 occupied (the Eastern provinces) — 太府參軍 was an officer of public administration Cf. Morr. 官 187—139.

When in the beginning of the rule of the *Tsin*-dynasty the country west of the (Yellow) river was totally ravaged and cut off from the remaining part of the empire, no money was any longer used there. When the closely woven silk and hempen cloth was ripped up to make parts of it, those pieces were spoiled, and it was difficult to make use of them in the market. (The result was that) they had destroyed only the women's labour (the tissue) which was furthermore unfit to be used as clothing, and the bad quality (of these stuffs) was excessive.

Though there are at present great disturbances in the provinces in the middle of the empire, yet these parts are perfectly quiet, it would, therefore, be reasonable to introduce here again the 5 *ts'u* pieces in order to further the uniformity in the transactions (i. e. to bring more uniformity in the commercial intercourse.)"

*T'sang-kuei* acted agreeably to this advice. He made it a rule to use money equalizing in value those pieces of silk. The money then had an extensive circulation and the people enjoyed the profits thereof.

#### EPOCH OF THE DIVISION BETWEEN SOUTH AND NORTH.

The condition of China during the reign of the *Tsin*-dynasty was very miserable. Since *Yuen-ti* had removed his residence to the new capital, south of the *Yang-tsze-kiang*, the powerful Tartar chiefs had pursued their conquest in the North, and established themselves in the ancient capital *T'sang-ngan*, where they assumed the title of emperor of China. So arose the Northern Empire.

The southern empire, China proper, was weakened by intestine war. The last monarchs of the *Tsin*-dynasty had neither the power nor the ability effectually to oppose the continual insur-

rections excited by ambitious ministers and chiefs. The minister *Hwan-huen* of whom we know that he had tried totally to abolish the money (See p. 66) had already conquered three fourths of the empire, and himself proclaimed Emperor by his army, when he was defeated and murdered by another powerful chief, called *Liü-yü* who as yet had remained faithful to his sovereign. *Liü-yü* restores the dethroned prince to his dignity, but perceiving how totally unfit he was to govern — for *Liü-yü* too was caught by the contagious disease of rebellion — he takes up arms against his master, captures the capital and causes the emperor to be put to death. For a short time an insignificant representative of the *Tsin*-dynasty occupies the throne, but fully convinced of his impotence, and fearful of his life, he abdicates in favor of *Liü-yü*, who now becomes emperor of the Southern Empire and the founder of the *Sung*-dynasty. This division into two empires has continued for above one century and a half, and during that time four different dynasties reigned in the North and five in the South. Ma-twan-lin first treats of the Southern empire, and then of that of the Tartar princes in the North. This part of our chronicle is especially remarkable for the excellent economical theories of money, advanced by the ministers in their memorials presented to the throne, or delivered in the assemblies of the emperor's privy council.

#### THE SOUTHERN EMPIRE: THE SUNG-DYNASTY.

From Ma-twan-lin we learn nothing of the monetary system of the first three rulers of the new dynasty, whose reigns together lasted but four years, and as no money indicative of being made

during that time is found, we may safely conclude that the emperor *Wen-ti* was the first that cast a currency indicative of that dynasty. In the year 430 he cast copper coins with a raised edge and the design of 4 *tshu*. They were equal in value to the old 5 *tshu* pieces. As these coins were easily to be distinguished from counterfeit and clipped pieces, the profits accruing from the fabrication of false money were very small, and the number of counterfeiters was reduced almost to a minimum. The coins of the next Emperor *Hiao-wu-ti* bore on the obverse the year-name *Hiao-kien* and on the reverse the indication of the value 4 *tshu*, but as it was probably too difficult by the method of casting coins in sand, to make a design on both sides the characters 4 *tshu* of the reverse were soon dropped<sup>1)</sup>,

But these coins being the cause that counterfeiting was practised again on a considerable scale, the emperor, grieved thereat, asks the advice of his privy council and the speeches delivered on that occasion are important in many respects.

罪 銅 策 刑。鑄 典。應 將 不 公 貨 徐 尚  
爲 賦 合 著 納 收 遵 大 有 私 薄 爰 書  
品。刑。宜 在 賦 銅 式 乏 革 俱 人 議 右  
詔 隨 以 往 判 繕 古 宜 造。聲。貧。曰。丞

The *Sang-shu* and councilor *Sü-yuen* gave his advice and said: "When the money is of a bad quality, the people get poor, and if once there is a general exhaustion, publicly as well as privately, it is too late to be mended. Now as great misery is about to befall us, it is a necessity and a duty, agreeably to the venerable precepts of the ancients, to draw back the copper (in order to) re-cast and better it, and to take ransoms instead of executing the sentences. It is written in the records of days gone by that it is meet to buy off the punishment with copper according to the circumstances of the crime. It is allowed (in the present

1) We omit the fragment of *Ma-twan-lin* VIII 184—20a as it is rather too long and of little importance. It contains the ad- vice given by a minister to make great coins of a nominal value of double the real, which was not adopted.

可之所鑄錢形式薄小。輪郭不成就。於是人間盜鑄者雲起。雜以鉛錫並不牢固。又翦鑿古錢以取其銅。錢既轉小。稍違官式。雖重制嚴刑。人史官長坐罪免者相係而盜鑄彌甚。百物踊貴。人患苦之。乃立品格。薄小無輪郭者悉加禁斷。時議者又以銅轉難得。欲鑄二銖錢。顏峻曰。議者將謂官藏空虛。宜更改變。天下銅少。宜減錢式。以救災。

circumstances) to publish that this shall be so in future (in order to come by the necessary copper to cast money).

As the form of the money which is cast is thin and small, and as the raised wheel-shaped edges are not applied, the false coiners among the people spring up like clouds. They mix their false fabrication with lead and iron, consequently those pieces are not firm and solid. Also they clip the old coins to get possession of the copper. And when such money has circulated, though in a small quantity, the official form is lost sight of<sup>1)</sup> and though severe punishments are inflicted to check this, the functionaries and those who hold high offices, and (therefore) escape the punishment for their offense, and those who further belong to it, cast false money in very large quantities.

By reason of this the prices rise all at once and the people taste all the bitterness thereof. Now if you institute a standard coin of the kind (which may circulate as money), the increase of pieces which are either too thin or too small or without the raised edge will entirely be counteracted. At this time one of the councilors wishing to have 2 t'su pieces cast, as the transfer of copper was very difficult, *Yuen-siūn* said: "Your councilor will think that as the treasury is empty, a change ought to be made in this, and as the quantity of copper in your dominions is small, the form of the money ought to be reduced (diminished) in order to meet the present wretched condition, and to relieve the pitiable people of the country. Indeed it would be stupid (in general) not to adhere to that opinion.

But that unbounded wish to have 2 *tsu* pieces cast renews the

2) Here we have in plain words, the "Theorem of sir THOMAS GRESHAM", that whenever bad money is circulating it drives out the good money. That

also in Chinese society good money has not the power of turning out bad money, we have had many opportunities to observe.

弊。賑國吊人。愚以謂不然。今鑄二銖恣欲新細於官無解於乏。而人姦巧大興天下之貨將糜碎至盡空立嚴禁而利深難絕。不過一二年間其弊不可復救。此其不可一也。今鎔鑄獲利不救。見有頓得一二倍之理。縱復得此必待彌年又不可。二也。人懲得大錢之改兼畏近日新禁市井懲得之間必生紛擾富商得志貧人困窮又不可。三也。況又未見其利。百代上不聽如此失籌當時取謗其人。

subtile (money) in the empire without giving a solution to the miserable condition; on the contrary, by an extraordinary affluence of false coiners among the people, the currency in your empire will be totally debased and the quality will be bad in the extreme. In vain you are laying heavy restrictions, where the profits are so great you will not be able to root out the evil, and within the course of one or two years the condition will be miserable beyond redemption. And this may not happen. This firstly.

At present by melting and casting large profits are made (by the government). But I do not see a reasonable ground to gain at once 100 or 200 per cent, and granted, we shall make such profit, we shall certainly have to await the end of the year (before it is certain that such a profit is made), and that also may not be. This secondly.

The people will impede the change of the large money, and as they will fear that within a short time new restrictions will be issued, this will cause excitement and confusion in the market; the rich merchants will attain their object, and the poor people will be in want and distress. This may not be either. — This thirdly.

Besides, I do not see any profit (in the measure), but only hurtful consequences as those mentioned. Let us then for the present desist from this plan by which we would draw down (upon us) the censure of all generations." The Emperor did not listen to that advice.

The dangers against which the member of the privy council

1) 鎔 is used instead of 鎔。

had so earnestly warned, actually came over the country when the tyrant who is known in history only by the name of *Fei-ti*, "the deposed emperor," caused pieces of 2 *tshu* to be cast. Ma-twan-lin gives in his simple language a glowing picture of all the miseries of that time.

"In the year 465 A. D. the deposed Emperor" cast coins of 2 *tshu*, the design was *King-ho* 景和 (the year-name), the form that of the wheel-shaped small state coin. As soon as a piece was paid and accepted among men, it served for a model to copy. Also the size and thickness were entirely a failure, it was without the surrounding rim, and the pieces which were not filed out or clipped were called fetus (來子 lit. coming children). When they wanted to characterize the very light and thin pieces they called them *Hing-ye* 荸葉 i. e. weed-leaves. In the market they were generally made use of. In the first year of the period *Yung-kwang* (the same year 465), which was the commencement of the destruction of all that was good, they were largely counterfeited; hence there was an inexpressible confusion in the currency. One thousand coins piled together had only a height of three *tsuin* (inches). Those corresponding in size to the last mentioned were called goose-eye-coins. 鵝眼錢 and those which were still smaller were called *Yen-hian* 繩環 (little rings of the thickness of a thread)."

商掬萬不手入  
賈斗錢復破水  
不米不斷碎不行。  
一盈數市沉  
萬一十井隨

"If you threw them into the water they did not sink, and in consequence they were broken in the hands. In the market they were no more prohibited. A number of 100,000 of those pieces was no more than one handful; a *teu* (about 10 pints) of rice cost 10,000 coins; trade was brought to a stand-still."

1) See DE CHAUDOIR, Pl. III n°. 27—28.

The tyrant had not yet occupied the throne a single year when the courtiers and people rose in rebellion, and murdered him in his palace. His image was not placed in the ancestral hall.

"Under the reign of his successor *Ming-ti* only the circulation of the goose-eye-coins and of those which were as thin as a thread was prohibited; the rest remained in circulation. False 錢 唯 又 疢 官 coining was suppressed with severity. At 用 普 工 署 the state-offices (the mints) the workmen 古 斷。尋 亦 were dismissed, and soon after, coining was wholly discontinued, and only the different species of money, formerly in use, circulated.

Here end the informations on the money of the Southern *Sung*-dynasty, and the first fragment of Ma-twan-liu now following is a speech delivered by the prime minister of the first Emperor of the next dynasty.

The political history of these days is the same as that of so many other states, ancient and modern, in the lawless and rude times when submission to the sovereign lasted only so long as he had power to enforce his claim. The events which led to the successive changes of dynasty were in every instance the same.

A prince of feeble character, who is only interested in some of his female subjects, and a general who having crushed a rebellion, dethrones his sovereign on his return. Or instead of that general a first minister who in fact is sovereign while his Majesty devotes himself to the internal palace-policy. Such a minister is commonly so taken up with his admirable management of the state affairs that he heaps honors and titles on himself. One day he comes to the knowledge that he descends from an old race of

independent vassals, powerful in the days of the *T'σeu*-dynasty, or perhaps earlier; and he thinks it quite in accordance with the venerable tradition of his ancestors to elevate himself to the rank of titular prince of that imaginary territory. A *placet* to that effect is addressed to the emperor who happy to have an opportunity to reward the faithful services of his minister, signs the petition. The first step leading to the imperial dignity is taken.

A short time after, another *placet* is presented, in which the faithful servant requests to be appointed king of the same imaginary kingdom. Again the emperor assents, because he has not the power to refuse. And so the second step is taken.

The third and decisive step is the *coup d'état*; without the knowledge or assent of his sovereign he assumes the title of "Son of heaven" and founds a new dynasty which he names after his imaginary kingdom. The dethroned emperor weeps and laments in his captivity that he should have lived to see that day, — as Chinese history often relates — but, as a rule, he need not complain long of it. His successor furnishes him with the means of making away with himself, and if it is contrary to the dictates of his conscience to take his own life, a kind hand is always ready to ease him of his scruples and to be responsible for the death of his late Majesty.

Such is, in the main, the history of the rise and fall of the four successive dynasties that have ruled over the Southern empire. And as to the condition of the people and the country amidst so many intrigues and court-cabals, the history of those days fully verifies the truth of the Chinese proverb 君臣不信國不安. "When sincerity is wanting between prince and minister, the kingdom is in disorder."

As it would, therefore, be useless, to give a minute account of the political transactions which brought about the changes of dynasties, we shall confine ourselves to what we find recorded of the money under each of the three dynasties.

The speech on the necessity that money should have an intrinsic value, which now follows, may be considered as one of the most excellent models of economical reasoning, which Ma-twan-lin communicates to us in his "Examination." It has, therefore, been given in full.

KUNG-K'AI'S SPEECH.

盜鑄輕錢爲禍深。人而累用。更重錢爲弊。患難無錢。則國之貴。被水潦。天下錢比少。○齊高帝建元四。凱土年。奉闡書。朝請三吳。孔元。

In the 4th year of the period *Kien-yuen* under the reign of the emperor *Kao-ti* of the *Tsi*-dynasty, the *Sang-su Kung-k'ai* very deferentially brought forward a proposition, saying:

The avenues and passes (leading) to the three divisions of the kingdom of Wu<sup>1)</sup> have during this year been covered with showers of rain, and consequently the purchase of grain cannot be dear<sup>2)</sup>. It is a fact that in the empire money is scarce, but it is not true that grains are cheap<sup>3)</sup>. Now this ought to be further inquired into (lit. this may not be left without inquiry). The wretched condition of the present cast money is chiefly to be attributed to the repeated alterations in the weight. The heavy currency excites discontent and is inconvenient in use, and that inconvenience in use is the cause that there is but a small quantity on hand. The light currency is of a bad quality, and is frequently coun-

1) 三吳 Cf. Mayers. II. 72.

2) The fields have been fertile, the harvest cannot therefore be poor.

3) He means: The harvest being abundant, the prices of grain might reasonably

be expected to be low; yet the reverse happens. But the reason of this must not be sought in the want of grain, but in the condition of the medium of exchange. The currency is scarce, and besides of a bad quality. Hence the dearness of food.

所盜鑄嚴法不禁者。由上鑄錢惜銅愛工也。惜銅愛工也者。謂錢無用之器以通交易務欲令輕而數多使省工而易成不詳慮其患也。自漢鑄五銖錢至宋文帝四百餘年制度有廢興而不變五銖者其輕重可得貨之宜也。以爲開置錢府方督貢金大興鎔鑄重錢五銖一依漢法。府庫以實國用有儲乃

terfeited, and its being debased is the cause that misery is deep. (The fact) that false coiners are not restrained by severe laws, results from the way in which the money is cast on the part of government. Government is too sparing of the copper and grudges<sup>1</sup>) the expenses consequent upon the mechanical process. They who act up to such principles have a notion of money without (heeding its character as) an instrument in daily use to further exchange. Their purposes and desires are merely to make the pieces light and as numerous as possible. They take care that the mechanical process is as simple as possible, and the fabrication of the pieces easy; but they do not think and consider what are the fatal consequences of it<sup>2</sup>). Since the princes of the *Han*-dynasty have cast the 5 *ts'u* pieces till the time of the emperor *Wen-ti* of the *Sung*-dynasty, more than 400 years have elapsed. In the way in which the money was fabricated, changes were frequently made (lit. there was abolishing and introducing), but the pieces kept their value of 5 *ts'u*. And by adhering to that weight they could keep the fitness of a medium of exchange. By establishing mint-colleges and by taking care that the metal is of a superior quality, and by building on an extended scale foundries for casting money, while the money has a weight of 5 *ts'u*, we will entirely act according to (those) rules of the *Han*-dynasty. Because the treasury will be well-stocked there will be

1) 愛 to grudge, See MENCIUS I. part 1.

VII. 5. Dr. LEGGE, Chinese Classics II. p. 15.

2) The words with which that noble and intelligent Chinese minister so freely censures the uneconomical principles of the emperor's government are on a level with the following passage quoted from Prof. W. STANLEY JEVONS' latest work, Money and the Mechanism of Exchange, page 59. "*Rialing is then unquestionably right in*

saying that our efforts should be directed not so much to the punishment of the crime (of counterfeiting) as to its prevention by improvements in the art of coining.. We must strike our coins so perfectly, that successful imitation or alteration shall be out of the question."

. Admirable is also *Kung-k'ai*'s definition of a currency as "the instrument in daily use to further the exchange.

量俸祿薄賦稅。則家給人足。頃盜鑄新錢者皆效作翦鑿。不鑄大錢也。若官錢已布於人使嚴斷。翦鑿小輕破缺無周郭者悉不得行。官錢細小者稱合銖兩。銷以爲大利貧良之人塞姦巧之路。錢貨既均遠近。則百姓樂業。市道無爭。衣食滋殖矣。時議者以爲錢貨轉小宜更廣鑄重其銖兩以防人姦。上乃使諸州大市銅會上崩。乃止。武

enough for the wants of the empire, if the salaries are liberal, and the duties and taxes small, the common people have enough to supply the necessities of their families. If there are for a time false coiners who imitate the new money, they cast no great coins but imitate the clipped pieces. And as then the (really good) state-money already circulates among the people, severe restrictions must be made against all coin that shall be clipped, too little or too small, cracked or without raised edge, so that (the false pieces) cannot circulate at all. And if the state money will have become small (in consequence of being clipped or worn), it must be weighed by *tsu an liang* (ounces<sup>1</sup>) and melted to be made into great coins again. This is profitable to the poor and well-to-do, and the ways of the rascals and cunning are obstructed by it (i.e. false coining is made impossible). In the medium of exchange there will be a perfect uniformity and what is employed far off as well as near (the capital) is of the same sort. The people take pleasure in their occupations; in the markets and on the roads there arise no quarrels, and clothing and food are produced in abundance. Now your councilor is of opinion that as the quantity of the circulating medium is small, it is right to mint again a large quantity, and to take care that the pieces have their full weight, in order to prevent in this way the false coiners. And if the emperor takes care that copper is on hand in the great markets of all the districts, cabals (intending) the emperor's fall then cease<sup>2</sup>).

1. It is then no more used as money but according to its weight (*jin* and *liang*). it is transferred and drawn back by the government in order to be remelted.

cation. Generally it means the death of the emperor, in my opinion it is here taken in the more general meaning of the emperor's fall, according to WILLIAMS it means also fall, ruin.

**z;** has here an uncommon signifi-

In the time of the emperor Wu-ti of the Han-dynasty (140 B. C.) Ling-wang-tsze deferentially offered a memorial in which was said.

"At present money is dear, and commodities are cheap and the dangerous desire to make a profit of 100 percent is the result thereof that we are pushing our horns against that which is good. Who does not know the hardships of sowing and reaping, and yet the value of a bushel of grain is but 1000 copper-pieces; who does not know the toil of the loom and spool, and yet a piece of silk has hardly a value of 300 copper-pieces. And in this must the reason be found that the money circulating among the lower classes is so frequently clipped. If it is thought desirable to make an end of such a condition for good and all, care must be taken that the money generally received shall be round and great. To receive back only one piece for the value of two pieces is more painful than being beaten with a whip and cudgel, or being imprisoned without knowing why. Even more than this (the grief at such a treatment), it makes that nothing is (henceforth) to be relied on<sup>1)</sup>".

#### THE LIANG AND TSAN-DYNASTIES.

In the beginning of the reign of the Liang-dynasty, money was so scarce that it was employed only in the capital and its immediate vicinity. The merchants who carried on an extensive trade with distant countries employed exclusively gold and silver bullion as medium of exchange.

The emperor Wu-ti supplied this deficiency of money by casting large quantities of all sorts of coins which, however, differed

1) 因於 comparative — 無所 | 繫 to tie and fasten, to imprison — 聊  
without knowing the reason why — 質 | liao is used for 懶 of the same sound.

more in names than in value. We shall not follow Ma-twan-lin's account of the names, dimensions and weights of all these sorts, as those particulars have little interest if they do not contain some curious phrase or historical allusion, which requires to be elucidated.

Of one of those sorts of money is told that it was commonly called boy's money 男錢, as the people believed that a woman who carried this money about her, would be delivered of a boy.  
云婦人佩之。郎生男也。

In the period of 520—27 the plan was suggested to supersede the copper money by iron money, in order to put an end to the speculations of some cunning traders who, taking advantage of the circulation of so many various sorts of copper money nearly equal in value, sought to make profit by continually exchanging one sort for another<sup>1)</sup>). But now there arose another difficulty. Every one could easily get iron, and as the government itself could not resist the temptation to make large profits by the casting of money, false coining was greatly promoted; so that, when that iron money had been in use about ten years the circulating mass of it was like a mountain. 所在鐵錢遂如丘山。

陌。八嶺利。之姦貫。而復載者貴。物  
名十以自以作。商誰計錢。以交價  
日。爲東。破求因旅論數。不車易騰

The prices of all commodities rose rapidly. Henceforth exchange was effected by cart-loads of money without caring for the number (of the coins), and who quarrelled for a single string of 1000 pieces? Travelling merchants and rascals (imposed upon the people, and) with the purpose of gaining profit, they made their way through the inmountain-passes into the East, where they brought them in the market at 80 per cent. The name was Eastern money. In Kiang-Ying<sup>2)</sup> they were worth 70

1) In the Vth Chapter the disadvantages of a double standard in China will be treated of.

district of Kiang-ling 江陵 in Hing-tien-fu province of Hu-nan.

2) Kiang-ying is the ancient name of the

per cent, (and there) they were called Western money. In the capital they had still a value of 90 per cent, and were called there great money (or long money). In the first year of the period *Ta-Tung* (525) the emperor decreed that they should be in general circulation at the full amount of 100 per cent. He dictated this to his subjects, but they did not obey. A hundred of these copper coins fell lower and lower, till at the close of that period the worth of a hundred had come down to 35 (or 35 per cent).

In the beginning of the reign of the *T's'an*-dynasty that ruled the empire after the confusions occasioned by the fall of the *Liang*-dynasty, the iron money did not circulate any longer. The new princes reverted for a short time to the old 5 *tshu* pieces which, measured against the still circulating goose-eye-coins had a relative value of 1 to 10. Another ruler of the same dynasty again committed the folly to introduce pieces of the weight of 6 *tshu* and a nominal value of fifty 5 *tshu* pieces. But soon the relative value was changed, so that they circulated together with the 5 *tshu* pieces at the same rate. As to this money Ma-twan-lin adds:

亡。行 崩。之 錢 與 人  
五 遂 象。有 詛 皆 不  
銖。廢 未 言 曰。便。  
竟 六 幾 利 縣 六 乃  
至 銖 而 帝 官 銖 相  
陳 而

the end of the *T's'an*-dynasty.

The people did not think them convenient, and they told one another the false rumor that the 6 *tshu* pieces had not graced the image of the emperor. When shortly afterwards the emperor died, the 6 *tshu* pieces were done away with for good, and the 5 *tshu* pieces continued to circulate till

1) 益多 worse and worse.

## THE NORTHERN EMPIRE.

In the Northern empire the Tartar chiefs *Topa* had established themselves, and gradually had they modelled their policy on that of the conquered people who were their superiors in civilization.

One of their institutions was the casting of money which bore the characters *Ta-ho* (lit. great harmony) for its device; but, says the chronicle, "nowhere did it occur that it was employed".

For a long time the want of money seems to have been very slight, for Ma-twan-lin passes a period of eighty years without so much as touching upon the subject. During this time barter was the only means by which business was transacted, which is evident from a decree, issued by his Tartar Majesty *Hiao-wu-ti*, deciding that money should be used in his  
**錢 紿 祿**.  
**二 錢**.  
**百 . 匹 準 百**  
**爲 緗 官** empire and that the salaries of all the state-officers should be reckoned by it at this rate  
that 200 pieces of copper money equalled a piece of silk.

This decree was attended with the remarkable circumstance that the coining of money did not, as usual, become a prerogative of the crown, but that the people whenever they wished to have money cast might go with their copper to the State-mint to have it coined; consequently the money was made of pure metal and so it did not occur that it was either debased or mixed. This money had again the standard-legend of the Chinese coins, 5 *ku*.

Notwithstanding all this the people had a dislike to money and did not want to use it in their dealings. Hence it is, that some

privy councilors persuaded his Majesty to enforce the use of money~~as~~<sup>ay</sup> as a medium of exchange, though they were of opinion that it~~it~~<sup>is</sup> it should be left to the people what pieces they thought fit for this~~it~~<sup>is</sup> purpose. And says one of them: "The same money will not do~~do~~<sup>do</sup> for the different parts of the kingdom, for in the South and East~~east~~<sup>est</sup> money is a great convenience to the people, as they have em— employed it there already in former times; but in the high North~~in~~, as for instance, in *Peking*, the Northern Capital, and in the far off districts and free states, where, till this day, no money is used, you cannot manage this affair in the same way, but it will be necessary gradually to accustom the people to it. The profit connected with the use of metallic money, compared with the simple mode of bartering goods, is indeed so great that it must be obvious to the people as soon as they can be gradually brought to employ it."

I may be allowed to quote a little fragment in which the excellency of the money as a medium of exchange is explained, if it were only to complete what elsewhere has been said on the same subject (page 67).

大外新方於濟不不爲負而布

If silk is used (as a medium of exchange), it cannot be divided into portions (without spoiling it), and if it is grain, there is the difficulty of transport. If, however, money strung together is used, people have

1) 下 in time, i. e. henceforth.

2) 鎮 name of part of the country, a

free-city or palatinate, see WILLIAMS. It frequently occurs in Ma-twan-lin's IXth. Volume.

nothing to do with false measures, or take the trouble to measure the exact number of feet (of the silk pieces) in order to make them fit according to the requirements of exchange. This is much more convenient than the other. So I submit it to your Majesty's consideration henceforth in all parts (of the kingdom) to circulate the *Tai-ho* money as well as the new coined pieces together with the old money, and without paying attention to their size, if they are good, internal and external (i.e. not clipped and not debased).

In the same fragment we find a report of an high functionality on the produce of copper in the different parts of the empire. Here we have an exact statement of the quantity of native copper and copper ore which was dug out of the different mountains and valleys.

The report ends with an urgent appeal to the central government to build foundries for casting money in those places where copper is found, and to submit the coining of money to a strict control. This advice was acted up to, and at the same time severe restrictions and punishments were instituted against false coiners, and rewards were promised to those who informed the government against the offenders.

In the beginning of the reign of the emperor *Hiao-ts'wang-ti*, the false coiners augmented again the quantity of debased coins, and it had come so far, that the false coins were whirled by the wind and floated on (the surface of) the water. A measure (*t'eu*) of rice rose to the price of nearly 1000 cash. The privy secretary *Yang-K'an* in memorial to the throne, said as follows: "Your minister resided for a short time in the province of *Yung-tsen*<sup>1)</sup>). According to an account (of those regions), the people together with the public functionaries cast 5 *ts'u* coins. In order to promote the welfare of the people, that mean and vicious state (of things) ought to be changed". A decree, containing the Emperor's will (on this subject)

1) A province west of the *Hsiang-ho* and North of the river *Wei*.

went down (was handed to the council of the ministers of the crown). But the eight seats (the dignitaries) of the *Sang-shu* (the ministry, central board of administration) did not agree to it (and they expressed as their opinion) that at present one had rather rely on the principles of former times and that it would be sensible not to break with them. They tried to withdraw the imperial consent and decision to the foregoing memorial and proposed arrangement<sup>2)</sup> of the minister (*Yang-K'an*). But as *K'an* thereupon again in a very clever way lay open his arguments, the Emperor followed his advice, and caused the 5 *tsu* pieces to be cast.

On this occasion one of the imperial historiographers *Wei-kao-tien* also offered a memorial to the throne, in which he said: The medium of exchange is the basis (foundation) of business and of the commercial dealings of all nations. To amend a vicious state (of that medium of exchange) by making alterations in the fabrication of money is therefore one of the first duties a king has to perform in his government. During the present time private coining has brought over us a profusion of debased currency, and the officials who have to examine and stop (the circulation of) the bad coins do not suppress or lay hold of a single piece.

The prices of copper are at present such that one gets a pound of copper for 81 *cash*, while they who cast thin coins, make out of a pound more than 200 coins. This already shows how large the profit is. And though they are prosecuted by heavy penalties, and the number

1) 爲理 = 當理.

2) 經 a regular series or arrangement.

3) 四民 the four peoples is here

nothing but a plural, meaning the nations of the four regions of the earth.

通。刑潤。料鑄。大錢。復改。三銖。爲半兩。此皆以大易小。以重代輕也。論今據古。至孝武文。以五分錢小改鑄四銖。至漢文。朝廷失之。彼復何罪。昔漢文。有五銖之文。而無二銖之實。今錢徒甚榆莢。上貫便破。置之水上。殆薄切。欲不沉。此乃因循有漸。科防不殆。徒有五銖之文。而無二銖之實。今錢徒。罪者雖多。姦鑄者彌衆。今錢徒。有五銖之文。而無二銖之實。今錢徒。

of those who incur punishment is large, the false coiners are still excessive in quantity. The money at present in use has only the device of 5 tshu, but it has not 2 tshu real worth, the pieces are as thin as elm-leaves, and if the best string extant is cut asunder and the coins thrown on the surface of the stream, they have hardly any inclination to sink.

Now this is the result of following the old way (lit. an existing stream). The supervisors who ought to provide against it, don't suppress it, and your Majesty's government loses sight of it. But in what degree are those (supervisors) to be blamed for it?<sup>1)</sup> In former times the emperor Han-Wen-ti diminished the money by one fifth (of its value) and had the pieces of 4 tshu cast. Hiao-Wu-ti changed these again for 3 tshu pieces and made half ounces of them. Now all these princes converted the great currency into smaller kinds, and heavy money into light. And now it is argued that the present ought to be modelled upon the past, and that it is, therefore, allowable to make a change in the great currency.

Now when the price of copper is extremely low, the cunning among the people engross the raw materials, as tin, charcoal, lead, and fine sand, and in a pleasant way they find in false coining a means of subsistence for themselves. And if the result is that they cannot enrich themselves by it, they have simply undertaken something that yields no profit, and therefore without more thought about (the matter)

1) The cunning imperial historiographer expresses himself here very diplomatically. He dares not say, "to what extent is the imperial government to be blamed," and therefore mentions only the state-comptrollers, but from the sequel it appears very clearly that it was a home-thrust intended for his Majesty.

they will give it up, and that so much the more when severe punishments are largely instituted against it. If your servant is to give his opinion (lit. to sound) on this matter, it will positively be this, that the medium of exchange must continue to circulate, and that the money received by the State as well as by private persons be true and good. It is, therefore, desirable to act up to the plan suggested by Wang-k'an.

Now while several influential officers advise the Emperor to introduce again the 5 *tshu* pieces, there is an old servant who with all due respect and deference repairs to court, and offers a memorial in which he requests in a very pressing way to have the 3 *tshu* cast again, as in his opinion the 5 *tshu* pieces are too large to be used as a single and indivisible medium of exchange. He describes a great many facts in the ancient and modern history of China, to prove that the value of the money was always regulated with respect to the wants of the time being. The oration of the piece is really so eloquent that, on reading it, one is inclined to forget that those opinions were delivered in the year 528 A. D., at the court of a Tartar prince in North China.

Having adduced his historical arguments, he thus continues:

不也。何可則。軍人州冠而莫輕。  
以且妨損以鑄國物郡難變。不重  
錢政於於富小用凋淪未況隨大。  
大興人政益錢少零沒除今時小。

"There is not a single piece, be it light or heavy, great or small, that has not undergone a change in the lapse of time. And in the present circumstances, now the disturbances of the (yellow) caps have not been crushed, while whole provinces and districts are ruined and the riches of the people are as scattered leaves, now the wants of the army and country are few, the casting of little money may contribute so much the more to an increase of wealth. And what injury will this cause to the government and what impediments to your people? Moreover the flourishing state of a reign is not the result of the money being large of size, no more than the decay of a reign can be attributed to the money being small of size; if only that which is received in public as well as in private (dealings) has a real value (i. e. if only the

Herewith we are at an end of Ma-twan-lin's informations as to the Northern *Wei*-dynasty,

#### THE NORTHERN TSI-DYNASTY

In the North we now see the same drama acted that in the South already so often and so successfully had been represented. The prime minister, after having obtained the title of king of *Tsi*, dethrones the last emperor of the *Wei*-dynasty, and is the founder of a new imperial line known under the name of the Northern *Tsi*-dynasty. As to the currency during its reign, the money of the *Wei*'s continued to be used, but as it was not in sufficient quantities existant to meet the general want, several functionaries began to make their own money which generally was named after the district were it was circulating. The effect of this unwholesome condition was that all sorts of bad money arose. For this reason, after having drawn back all copper money as much as possible, the emperor caused it to be cast into 5 *tshu* pieces, and to prevent the use of false money in the markets there was a balance placed at the entrance of every market-place, in the capitals as well as in the provinces and principalities, and every private person who used scales in the market, was obliged to have them verified by the government standard balance. Assizement thus took place.

A hundred copper pieces of 5 *tshu* were to have a weight of 1 pound, 4 ounces and 20 *tshu* (i. e. 500 *tshu*) in order to be employed as a medium of exchange in the market; and money greatly adulterated might not be used. One great advantage of this measure was, according to the Chinese chronicles, that every individual could now make money, if he liked; for provided his

pieces had the standard weight and quality, they were current in the market.

Another particular illustrating the despotic government of those times may not be omitted.

私銅止。惡。二而

而金或河  
官銀用西  
不之西諸  
禁錢域郡

Notwithstanding the measures just mentioned the false coiners did not remain idle, and they seemed to carry on such a flourishing trade that their worthless coins overwhelmed the country. Many a one was put to death for the offence but it was impossible to suppress the evil, and then it was that the emperor ordered to enhance the prices of copper in the market, and as consequently the profits became less, the false coiners discontinued their occupation for a while.

What follows on the monetary institutions of the Northern *Tsi*-dynasty, is of little interest. Equally uninteresting is the subsequent history of the Northern *Ts'eu*-dynasty. The only fact worth mentioning is, that under that dynasty the gold and silver coins current among the barbarous tribes of the far West were made use of in the provinces of China, west of the *Hoang-ho*, and that the public functionaries did not prevent it. What pieces they were is described by Ma-twan-lin in a note borrowed from the *Han-shu* (the annals of the *Han*-dynasty). As this note contains some linguistic difficulties, I have added the Chinese text to the translation, and have tried to explain its meaning as much as possible.

漢書西域傳。罽賓國以銀爲騎馬。烏弋山燕國漫爲錢。罽  
文爲騎馬。也。烏弋山燕國漫爲錢。罽

面。幕爲錢文。大月氏亦同。王爲夫人。

In the Annals of the *Han-dynasty*, the chronicles having reference to the Western foreign regions, (is reported) that in the country of *Ki-pin* the coinage is made of silver. On the obverse is the design a man on horseback, on the reverse is the face of a man, but what properly makes the coin is the reverse. The money of the kingdom of *Yen* of *Wu-yi-san* is similar to that of the country of *Ki-pin*; on the obverse there is the head of a man, on the reverse a horseman. Besides the surrounding rim is left away in those gold and silver coins. In the country of the *Ngan-si* (the Parths) they make also their currency of silver, on the obverse is the face of the king, on the reverse is the face of a lady. When the king dies the coins are recast. In the kingdom of the *Ta-yue-ši* (the Scyths) it is just the same.

As the Chinese reader will be aware, a great many difficulties present themselves in this little fragment. *Ki-pin*, is *Cophine* or *Kaboul* a part of *Persia* in *Afghanistan*. — 幕 taken in the meaning of the reverse of a coin, is not to be found in any Chinese dictionary, but the Japanese dictionary 字林玉篇 *in voce* 幕 gives the explanation: *zeni-no ura* ゼニノウラ, the backside or reverse of a coin. — The phrase 其止郎漫也 is difficult to explain. 漫 is here also a technical term signifying the same as 幕, which appears from a sentence in another work in which also the coinage of foreign countries is treated of, and which was kindly lent to me by Prof. G. SCHLEGEL at *Leiden*. In this work entitled 格致鏡原 Vol. 35. page 18b, the following information is quoted. “*Ts'ang-yen* says:

female head, it is most likely the coins of king Phraataces which are alluded to in the *Han-šu*. It also very well agrees with the time, as the *Han*-dynasty, in the annals of which those informations are found, reigned 200 B. C.—190 A. D. The legend around the head of the Parthian courtisane is a proof her lord's fondness. It runs ΜΩΤΣΗΣ ΒΑΣΙΛΙΣΣΗΣ ΘΕΑ—ΟΤΡΑΝΙΑΣ (Musa, the queen and heavenly goddess).

We silently pass the introduction of all sorts of coins bearing such grand inscriptions, as "the eternal money circulation throughout all countries," 永通萬國錢 and "the money of the five elements, spreading in great abundance;" 五行大布錢, their feeble metallic value was the cause that their little course was soon run. Specimens of these pieces may be seen in DE CHAUDROIR and in several Musea.

Of little importance to our subject is also the history of the *Sui*-dynasty. For though under this race of kings the two parts of China were consolidated again to one empire, the realm was in such a deplorable state of anarchy and confusion that to attend to the economical and commercial interests of the people was a thing quite out of question. And if some good measure was taken, the false coiners soon rendered it ineffectual. Two efforts to prevent the circulation of bad money are found in Ma-twan-lin's "Examination" Vol. 30 *a—b*.

tender). And on coming forth again through the entrances, people were obliged to see whether the money they carried about them agreed with the specimen, and then they got leave to pass on. The money which did not agree with the specimen was broken, and (lit. to make that) the copper was confiscated by the government.

Besides the restrictions on the bad money, it was regulated that over every lodging-house or shop in the capital as well as in the provinces, a list should be nailed up containing a specimen (of the coins) which were permitted (to be used), and that the pieces not coming up to that specimen should not be received in the market.

In the 18th year (598) (the emperor) ordered Liang, prince of Han to build five money-foundries in Hing-tšeu. Also in Kiang-nan there circulated too little money among the people. Kwang, prince of Tsin then proposed to his Majesty to have money cast also in Ngo-tšeu<sup>2)</sup>, where at some places in the "White-hempen mountains" copper ore was found. His Majesty then ordered to build there ten money-foundaries. Further, he ordered Ssu, prince of So to build five money-foundaries in the province of Yik-tšeu<sup>3)</sup>. Now, as at that time the money increased in quantity), and as there came an abundance of bad money in circulation, he ordered the officials charged with this (duty) to exercise a strict control over the ready money<sup>1)</sup> in the inns and shops of the whole empire, and to break all that was no state-money, and to confiscate

1) 見錢 is used here for the first time by Ma-twan-lin. It means visible, real, tangible money in contradistinction to the invisible, imaginary paper-money which during the author's life in such large quantities circulated. This is evident from the antithesis of 見錢 and 飛錢 frequently occurring in the history of paper-

money. In Kuang-hi and after him in all European dictionaries ready money is the only meaning given -- 見 is used for 現 hien, meaning to appear, to be seen, *de facto*.

2) A principality on the Yang-tze-kiang, prov. of Ha-pe.

3) A province in Ssu-fu-men, its old name was So.

the copper obtained in that way; and those who carried on their trade in the capital with bad money, and were detected in the act by the functionaries, were put to death.

So, for a great number of years, false coining diminished a little. But after the period *Ta-ye* (605—617), when the royal tie which held society together got loose and ravelled, and even state-ministers were false coiners and great rascals, counterfeiting at last increased so much, and the money which circulated, got so thin and bad, that 1000 pieces (originally) equal in weight to 2 pounds, gradually got so much lighter that they came down to a weight of 1 pound. Some cut little pieces of iron from their ploughshares, or they cut up clothes and paste-board to make money thereof, and promiscuously they employed all this. (The consequence was) that money was cheap and merchandise (goods) dear, and this lasted till the end of the dynasty (618).

The fall of the *Sui*-dynasty was near at hand. Taking advantage of the disturbed state of the country, *Li-yuen*, titular duke of *T'ang* drove away the reigning monarch, and founded the great *T'ang*-dynasty. His descendants ruled China for nearly two centuries.

## CHAPTER IV.

### HISTORY OF THE MONEY UNDER THE T'ANG-DYNASTY.

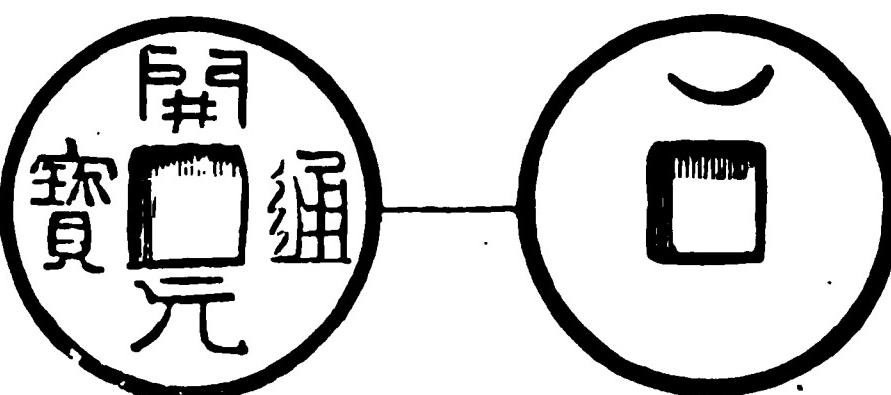

KAI-TUEN-T'UNG-PAO-MONEY. — ORIGIN OF THE NAIL-MARK ON THE REVERSE OF THAT COIN. — OPINION OF LATER TIMES. — FRAGMENTS OF THE ANNALS OF FALSE COINING. — FREE COINING DISCUSSED AGAIN. — THE ANNALS OF FALSE COINING CONTINUED. — REPORTS OF THE COLLECTORS OF SALT AND IRON-DUTY. — APPARITION OF PAPER-MONEY. — TYRANNICAL MEASURES TO OBTAIN THE NECESSARY COPPER. — RESTRICTIONS ON THE POSSESSION OF READY MONEY. — MA-TWAN-LIN'S CRITICISM. — BUDDHA RELIGION LAID UNDER REQUISITION AND FINALLY ABOLISHED IN ORDER TO CONFISCATE THE COPPER VESSELS OF MONASTERIES AND TEMPLES.

---

A better and brighter day dawned upon the Chinese empire with the accession of the *T'ang*-dynasty. The first emperors were energetic men, full of that spirit which animated the princes of high antiquity, a spirit which we learn from the writings of the philosophers and from the books which record the sacred history of old China. Many improvements, both political and social, they accomplished, and their best cares were devoted to the welfare of the country and the people.

Among the decisive measures which wrought a change in the wretched condition resulting from a maladministration and confusion of a long series of years, one of the first was to make a change in the currency. The *5tshu* pieces which had been the standard coin for more than eight centuries, were held in such

contempt that it was impossible even to retain the name; a coin entirely new was instituted bearing the legend of *Kai-yuen-t'ung-pao*, or current money of the newest beginning!). According to the testimony of many writers of different times, this money was uncommonly good, and it may safely be considered the best coin issued in the course of many centuries. The history of its rise, the importance which it has had, and the opinion on it of later generations, have again been related in the words of our Chinese authorities, and this time also there will be ample opportunity to give many an explanatory note on Ma-twan-lin's text.

A diagram of this coin has been appended, because of the curiosity of the nail-mark on the reverse. The origin of this casual mark

would little more interest us than so many other anecdotes woven as a "fringe to grave History's dress," were it not that since the issue of the *Kai-yuen* coin, this mark has spread all over the East, and for hundreds of years together it occurs on the coins of China, and even on those of Japan and Corea. It is highly probable that without knowing the origin of it, and merely following the bent of their genius to imitate anything and everything, the Japanese adopted this mark.

The historical record of the origin of the new coinage runs as follows:

- 1) It is not unnecessary to point out that in this case 開元 is not the year-name of the period 713—42 as presumed by MARSDEN in his "Oriental Coins Pl. LVI j<sup>o</sup> Vol. II, p. 819," but simply

denotes that it is the coin which dates from the beginning of a new period in history. As appears from the historic quotations communicated below, this coin was cast in 622, the year of accession of the T'ang-dynasty.

唐武德四年廢五銖錢。鑄開通元寶。計一千重六斤四兩。錢每十錢重一兩。中置錢監於洛。并幽益等諸州。賜秦王齊王三鑪。右僕射裴寂一鑪。以鑄。沒其家。死。射者皆鋗。其製錢。間生綫環錢。高祖初入關。民屬。盜鑄者死。

In the fourth year of the period *Wu-te* (622) under the reign of the *T'ang*-dynasty, the 5 *ts'u* pieces were abolished, and the *Kai-t'ung yuen-pao* money was cast. Ten pieces had a weight of an ounce, and the weight of 1000 pieces was estimated at 6 pounds 4 ounces (100 ounces). They hit upon the exact mean as for weight and size. A general money-office was established at *Lo(yang)* (the capital of China under the *T'ang*), and likewise in *Ping-t'seu*, *Yiu-t'seu*, *Yik-t'seu*, and other provinces. (His majesty) gave the prince of *Tsi* and the prince of *T'si* four money-foundries each, and *Pei-si*, a principal minister of the right side, one foundery for casting money<sup>2</sup>). False coiners were put to death, and their houses and property were confiscated.

In the beginning when *Kao-ts'u* took the decisive step and mounted the throne of the *Suy*<sup>3</sup>), the people fabricated a sort of money of no

1) **僕射** *Pu-ssai* lit. "Servant archer." Title of a principal minister 神宗

2) **左僕射爲宰相** The Emperor *Sin-tsung* made the left and right *Pu-ssai* officers, his ministers of State. (MORE in voce 官, 4).

3) **高祖入關** "When *Kao-ts'u* took the decisive step and mounted the throne of the *Suy*." This rendering is a little free, but justified by the historical events which caused the accession of the prince of *T'ang* to the throne.

The emperor *Yang-ti* of the preceding (*Suy*)-dynasty, generally hated for his maladministration, having repaired to the south of his empire, the prince of *T'ang*, called *Li-yuen* (Cf. MAYERS n°. 381) marched with a numerous army to the capital *Li-ning-fu*, and captured it. At the tidings that the emperor had been murdered in the south, he had *Yang-ti*'s grandsons *Yeu* and *Kung* successively proclaimed emperor, but after a short time the two boy-kings were dethroned and murdered. As there were now no other descendants of the *Suy* line, *Li-yuen* made himself master of the throne, and reigned under the name of *Kao-ts'u*. The new dynasty was named after the principality of *T'ang* (唐) of which *Li-yuen* was titular duke.—

more than a silkthread in thickness; 80.000 or 90.000 of such pieces hardly filled a half-*hu* (bushel). Then the *Kai-t'ung-yuen-pao* pieces were cast. The characters occurring on that coin were made by *Ngeu-yang-siün*, under-secretary of the censurate.

The characters (words) and the writing accorded with the workmanship. The words were (written) in the *tšwen* and *li* writing, in three different writing-manners<sup>1)</sup>. Of these words first came those at the top and then those at the bottom, moreover the left-hand came after the right hand (characters<sup>2)</sup>). *Kien-hoei-ts'ui* of *Tšing* says that when *Siün* showed a model in wax (of this coin), her august majesty queen *Wen-tek* reaching for it, left on it the impression of one nail, and that this is the reason why at the top of (the obverse of) the coin there is the mark of a nail. An ounce is 24 *tšu*, hence a copper piece weighs a little less than  $2\frac{1}{2}$  *tšu*. Comparing the ancient weights with the present, the ratio is of 3 to 1. So that at the present time the money is somewhat heavier than 7 *tšu* ancient weight ( $2\frac{1}{2} \times 3$ ), thus as heavy as the old 5 *tšu* pieces, plus a weight of a little more than  $2\frac{1}{2}$  *tšu*.

We see that the intentions of the government regarding the

**入關** is lit. to enter a doorway. According to WILLIAMS **關** signifies also a Rubicon, an important point in one's life.  
 1) *Tšicen* is the seal, *li* the official-writing manner. Three different writing-manners. Cf. Matw. IX 4b, where of a coin of the *Sung*-dynasty is said 作真行草三體 the (legend) was made in

three different writing-manners, strait-hand, running-hand and grass-writing, DE CHAUDOIR *in loco*. Pl. VI. 40—42 gives a diagram of each of them.

2) Right and left side are as in heraldry. Just as a coat of arms, a Chinese coin has its own right and left side and not that of the looker-on. See the diagram p. 100. What Matw. calls the left is as seen by us the right side. The same fact is obvious from Matw. IX 2a.

issue of this new money were good in every respect, and the opinion of later times has been very favorable also. "This money is so excellent, says *Sui-ye*, (the author quoted page 16) "that as soon as the *T'ang*-princes began to cast it, it spread all over the empire; and even up to this day it is frequently met with;" but, continues he, "under the *T'ang*-dynasty itself, these coins were not on hand in such large quantities". [Matw. IX. 42a]. This last remark explains much of the history that follows.

Also *Tung-lai* the other writer on money (See page 13) speaks in high terms of this money. He says [Matw. IX. 37b]: "From the *T'ang*-dynasty to the five dynasties it has not been necessary to alter the value of the *Kai-yuen-t'ung-pao* money once fixed, because with this money the exact proportions had been so admirably hit upon. 最得其平。

But now the money was really so good, there was at once a great demand for it, and the Chinese, these matchless false coiners, found in this fact a fresh opportunity to exercise their occupation with double zeal, and to render the judicious measures of the central government ineffectual by melting the good money and to circulate it again mixed with other baser metals.

Mr. JEVONS says somewhere in his admirable work on money: "The annals of coinage in this and all other countries, are little more than a monotonous repetition of depreciated issues, both public and private, varied by occasional meritorious but often unsuccessful efforts to restore the standard of the currency". This is perfectly applicable to the history of the money under the *T'ang*-dynasty, as recorded by Ma-twan-lin in the last part of his eighth volume, and if I had no other task than to give an

account of Chinese money, this short quotation would suffice to characterize the time which now follows.

Involuntarily I recall the time when I was preparing this part of the work, the many weeks of incessant and dull labor necessary to get an exact view of the history of this period. All the time I felt as if I were wandering about in an unexplored desert where for miles together nothing remarkable meets the eye, and where the mind grows weary with an eternal and mournful monotony. Yet occasionally I found an oasis which I have not failed carefully to mark down. To these most fertile spots I intend to devote a few lines that he who goes out on such a wandering expedition after me may know where to find a resting-place, worth his while to examine more narrowly. I shall, however most earnestly try to make the passage through the dreary sands as short as possible. And might it appear to my reader that the bridges I have built here and there, to get over such places as were well-nigh insurmountable, are too light and dangerous, I kindly beg him to fortify the frail structure with some timbers of his own store.

In a short time false coining had so considerably increased that 40 years after its issue, the new money was abolished again, and the state-money was provided with a new legend in order to check the use of the false *Kai-yuen* pieces. When this measure threatened to become fatal to trade it was soon retracted. The swarms of false coiners increased again, nay, it came even so far that there were who made false money in vessels and on rafts in the middle of the river 有以舟筏鑄江中者. Then the government ordered that the circulating false money should be accepted, a measure which did not improve the matter, to be sure.

者錫官爲民儀  
沒鐵督業。多鳳  
官過捕。詔私中  
百載巡鑄瀕江  
斤銅江錢江

there was above 100 pounds of copper and tin (aboard a vessel), should be confiscated by the government.

During the period *J-feng* (676—79) the people living on the river *Ping-kiang*) made a regular employment of false coining. Hence it was ordered that a journey to that river should be undertaken with a view to examine the matter, and that the officials should set afoot an inquiry and persecution. What

Another measure to diminish the circulating quantity of bad money was, that grain and rice were taken from the state-granaries and brought to market, and the bad money was accepted as legal tender to an amount of 100 pieces to a measure. "To a measure, says our text, 100 pieces of false money were accepted as a part of the payment" 斗別納惡錢百文<sup>2)</sup>. The false coiners expiated their crime with their lives, and the accomplices (lit. those who supported and protected them) were persecuted and summoned before the judge": 私鑄者抵死。隣保從坐.

Queen *Wu-hen* again tried another expedient to check the deeply-rooted evil in some degree. Henceforth it was not allowed to make payment in pieces strung together, but they must circulate loose, that the copper, tin, and iron pieces might be distinguished at once.

The haunt of the false coiners was the country called *Kiang-Huai* 江淮大甚, and they were so skilful and cunning that notwithstanding the repeated efforts of the government, the officials were unable to do anything against them.

Ma-twan-lin says:

1) In the North of China, province of *Sze-fang*.

2) The false coins were in this way reduced to a sort of change or token,

which only to a certain amount were allowed to circulate as legal tender. It was thus a legitimation of false coins by the government

quantities. Rich merchants gradually collected the good money to sell it to the false coiners of *Kiang-hoai*. In the capital the quality of the money had remained still very good, but every year it was collected and transported by freights an cartloads".

And as a proof how far the Chinese were advanced in the art of making false money, our author says: "Some melted in a short time 100.000 pieces out of tin in the form of copper-money. 或鎔錫模錢。須臾千百。

After so many abortive attempts the imperial council was at a loss how to proceed, and an assembly of the Lords of the realm was called in order to advice his Majesty in this juncture. When they were assembled an imperial message again raised the question whether it were desirable to retract the existing prohibitions against the casting of money by private persons, and to leave it entirely free. In that case the state should have to exercise only a strict control over the money brought in circulation. Ma-twan-lin gives: 1 the imperial message. 2 two speeches, one defending the other attacking the proposal. 3 the imperial decision. Many passages of this fragment show us that notwithstanding the wretched social condition of that time the humor of the Chinese statesmen was not quite extinct.

In the district of *Kiang-hoai* a large quantity of money was cast, even as many as 10 various sorts; it was mixed with iron and tin, light of quality, and spread in great profusion; often it had not even the form of money. A (good) piece of money was commonly worth 7 or 8 pieces of this money cast in large

In the 22<sup>nd</sup> year of the period *Kai-yuen* (734) 3<sup>rd</sup> month 21<sup>st</sup> day an imperial decree was issued (in which was said) that pieces of silk might not be measured by a foot or an inch to serve as a medium of exchange, and that edible pulse and grains might not be used any more by handfuls and spoonfuls to barter what one had for what one had not. The reason why the ancients made money was to circulate merchandise and silks. Though at present the government casts money, what is paid for (by means of money) is not much, and though the generally received principle in the making of money is to economize the expenses of the fabrication, labor and expenses are as yet important, while the amount of what is provided for common use is not equal to the want, and perpetual complaints are made of the bad state of the money. What in the lapse of time has continued to exist without change? Formerly in the time of the reign of *Han-wen*(*ti*), while free coining was already granted to the people, it was not prohibited by that sage prince, notwithstanding *Kia-I* thought it wrong. Those old times are past and gone, the present is before us. Living in other times and under other circumstances (lit. while the details of the events are different) it is desired that private persons are not prevented from casting money. How far is that right?

When in a general assembly of ministers and lords the question was discussed, whether it should be allowed or not, the privy councilor *Ts'ui-mien* spoke these words: "If we allow the money which is in common use in the empire to be cast by private persons<sup>1)</sup>, the people will un-

1, lit. The actual money of the country, inversion which reminds us of Thomas Carlyle's style.  
which at present is used, if we allow it to be cast by private persons. It is a rhetorical

人必競爲各徇所求。小如有利漸忘本業。大計斯貧。是以賈生之陳<sup>1)</sup>七福<sup>2)</sup>。規於更漢令太公創九府。將以殷貧人。況依法則不成違法乃有利。謹按漢書文帝雖除盜鑄錢令。而不得雜以鉛鐵爲他巧者。然則雖私鑄不容姦錢。錢不容姦則鑄者無利。鑄者無利則私鑄自息。斯則除之與不除爲法正等能謹於法而節其用。則令行而詐不起。事變而姦不生。斯所以稱賢君也。

doubtedly make it in large quantities, and though the profit which every one tries to make for himself is but small, yet he will gradually leave his old employment in the lurch. And great, it may be computed, will be the poverty afterwards, and that was the very reason why *Kia*-(*I* the minister of *Han-wen-ti*)<sup>1</sup>), thinking that such a proceeding would produce the seven blessings set forth by him<sup>2</sup>), remonstrated<sup>3</sup>) against it, and insisted on the revocation of the decree issued by the *Han* (emperor). The institution of the nine departments for the administration of the finances by *Tai-kung* was made with a view to sustain the poor. But (it will be said) if one does not succeed by acting in conformity to a rule, it may be of use to act against that rule. If we attentively look through the annals of the *Han*-dynasty we will see that though the emperor *Wen-ti* repressed false coining with severity and would not suffer the money to be mixed with lead and tin in order to adulterate it, (he managed it so) that private persons were allowed to cast money, but false money was not tolerated. Now, in that case, casting money yields no profit, and private persons cease casting of their own accord. In this case the restraint is perfectly equal to the non-restraint. When after the enactment of laws and regulations due care is taken that they are maintained, it is quite possible to cut off the road to such practices and to manage it so that (money) continues to circulate without the appearance of bad money. Such a proceeding alters the affairs, and causes that there is no false money fabricated. To effect

1) See page 31.

to state.

2) 陳, to set forth, to express carefully,

### 3) 規 = 規諫.

this end is that by which a sage prince is characterized. Now if in accordance with the principle of free coining, we take severe repressive measures against the false money, so that the officials positively and surely shall seize every person (who violates the law) and that all shall know the restrictions, we shall indeed act according to the policy of the *Han*-dynasty, though I fear that even then we shall not quite act up to the old traditions of the illustrious *Tang*. Now if the copper, received as taxes by the government (service), is held back, money may be made of it in the state-foundaries and if we accurately estimate the unit of value, private persons will not be able to make profit. It will be easy to distinguish them (those coins) in the long run and very difficult it will be to adulterate them. If we, moreover, take care that the old seals are upheld, and that we do not transgress the fixed measure and limits, the money will be an object which has its full value as a medium of exchange. As the profits derived from coining cannot be large in this way, what can we then further expect of the casting of money by private persons, as afterwards we shall have enough for general use?

*Liu-tsi*, an officer of the left palace gate and secretary to the board of control of government officers<sup>1)</sup> said: "It lies with the prince to give and it lies with the prince to take. As the people honor their prince like (the light of) the sun and moon and as they are attached to their prince like to their fathers and mothers, the prince uses such expedients, and his being able to do so is (a visible proof of) his

1) For those official titles see MORR. in *vice 官* 76 j<sup>o</sup>. 138. The high officers at court were divided into those of the left and those of the right side. The left side was first in rank.

*Liu-tsi* first reminds us of the manifold institutions of the ancient kings, he quotes the piece of *Kuan-tze* already treated of page 10, with the intention to show that only the sovereign has a right to manage the monetary affairs of a country.

主之權。今之錢。即古之下  
上幣也。陛下若捨之任人。則

利。夫鑄錢不雜以鉛鐵。則惡不重。禁無也。奈使利。

power as the ruler of men. Now the present money is the medium of exchange of the lowest sort of the ancients. If your Majesty rejects it and thrusts it on the people, he who is at the head will no longer be able to govern those who are under him, and the subordinates will not be able to serve him who is set over them. This may not be. — This is my first objection.

When commodities are cheap, this is prejudicial to agriculture, and is the money base, it affects trade, hence it is the duty of a good ruler of the empire to exercise control over the relative value of commodities and the quality of the money. Are commodities heavy (when measured against money) the money is light. The fact that the money is light results from the quantity of goods. Is it (the money) much (in abundance) a law must be passed to suppress it, and in this way to make that it becomes scarce, and consequently heavy; if it then gets too heavy again, a law must be passed to diffuse it, by which it is made light again. Surely, this is the fundamental principle by which the value of the money is maintained. Now would you put this in the hands of the people? Such a thing may not be. — This is my second objection. — If in casting money it is not mixed with lead or iron, it does not yield any profit, and if mixed with it, the money is bad. If the restrictions which cannot be made severer, are not yet sufficient to check and prevent it

1) 假於人 to transfer. — to put in another's hand. Another instance of 假 in this signification may perhaps be found in the passage on page 34; where I, however, took *kia* as an adjective of the compound 假貴. As

far as I know, *kia* in the signification of to transfer occurs only connected with 於. The construction of the preceding sentence (on page 34), however, 以作兵器 allows us to take 假 there also as a verb.

不足以懲息。方今塞其私鑄之路。人猶冒死以犯之。况啟其源而欲人之從令乎。是設陷穽而誘之入其不可三也。夫許人鑄錢無利。則人不鑄。有利。則人去南<sup>1)</sup>。訕者衆。去南訕者衆。則草萊不墾。又隣於寒餒。其不可四也。夫人富溢。則不可以威禁。故法令不行。人之不理。皆由貧富之不齊也。若許其鑄錢。則貧者必不能爲臣。恐貧者彌貧。而服役于富室。

(this mixing lead and iron with the copper) and that while at present the roads leading to private coining are blocked up, the people still continue to adulterate and run heedlessly on death in order to violate the law, how much more will this be the case if that source is opened and the people are desired to tread that way. This is making snares and pitfalls and enticing the people to run into them. This may not be either. — It is my third objection. — Further, if you grant the people (the privilege) to make money without their being able to make profit by it, they will cast no money; but if it yields profit, then they desert their fruitful fields<sup>1)</sup> and are these deserted, thistles and weeds will not be ploughed up, and we shall soon come to cold<sup>2)</sup> and starvation. This may not be either. — It is my fourth objection. — If the people who then will cast money are rich and opulent, rewards and encouragements will be of no effect, and if they suffer want and poverty, threats and restrictions will be of no avail, and that your lawful orders will not be executed and that your people will not act according to reason and sense will be the consequences of this, that poverty and wealth are not in proportion, (that with the one wealth and with the other poverty will be the reason of the violation of the law). Now if you allow private persons to cast money, the poor, to be sure, will not be rich enough to do it, and then your servant fears that the poor will become still poorer and overawed by the power of the rich families. And if the rich families occupy themselves with it, they will steal the more. In the time of

1) 南 properly "south" is here used for fertile, as the south is "the region of heat and vegetation, where things get nourished." 2) Because silkworms will not be reared

Wenti of the *Han*-dynasty free-coining was the cause that the feudal princes of *Wu* and *Pi* were as wealthy as the emperor himself, and that the treasures of the lord *Tang-t'ung* were equal to those of a king. — All this were the results of the casting of money<sup>3).</sup>.

Certain it is that, if you wish coining to be granted to private persons, it is bestowing upon them an advantageous power, and it is giving that lever out of your hands. This may not be. — This is my fifth objection. —

Your Majesty, undoubtedly, still adheres to the opinion that it is hurtful when the money is heavy (dear) and that it yields little profit when the fabrication is expensive. Why then your servant wishes to tell you that you should leave off following such stupid calculations. The reason why the money is dear is that the number of persons (making use of it) is daily increasing in comparison to the number of consumers of former times, while the number of foundaries is not increased above the old number; besides, the state-money is heavy in proportion to the price of copper (which is now) rather higher (than formerly). Now this again is the reason that the false coiners break the heavy coins to make light ones of them. Are the restrictions on that money mild, it is brought in circulation, and are they severe, it ceases (does not take place) and then false coin-  
ing will come to an end of itself. The reason why the money is now scarce, and why the quantity which is cast, is not in proportion to the want, is the dearness of the copper, and the copper is dear because it is in great demand for various purposes, for copper is still more suitable than iron

1) 以 = 以爲.

2) 猶 = 由.

3. Those princes revolted against *Han-wen-ti* (See Mat. VIII. 7a), — p. 35.

在乎銅貴。銅貴之由，在於採用者衆矣。夫銅以爲兵，則不如鐵。以爲器，則不如漆。禁之無害，陞下何不禁於人？則銅無所用。銅無所用，則銅益賤。銅賤，則錢之用給矣。夫銅不布下，則盜鑄者無因而鑄。無因而鑄，則公錢不破。公錢不破，則人不犯死刑。錢又日增，末復利矣。是一舉而四美兼也。伏惟陛下熟之。

to make arms, and better than lacquerware to make vases; without loss however you can forbid this. Why should your Majesty not prevent the people? If you forbid it, copper will not be so generally wanted, and this will cause the price to fall, and then you will be able to supply the want of money. Is that copper, moreover, not so widely diffused among the lower people, false coiners have no opportunity of making false money of it; nor does the state-money get broken, and the people do not violate the law any more and are not put to death. The money increases daily, and this again yields profit in the end. So a single act results in four successful consequences. I beseech your Majesty to consider this maturely.

His Majesty's sublime decision in this matter makes us strongly suspect that he has not listened at all to the sage counsel. Seven months afterwards another imperial decree is issued commanding that in great commercial transactions merchandise should serve as legal tender, while in smaller purchases in the market, partly money, partly merchandise should be employed. The decree reads thus:

其年十月十日。勅貨幣兼通。將以利用。則深法末。爲弊。本貴刀是末。錢而布帛爲本。

In the same year on the 6th day of the 10th month an imperial decree was issued in which was said: If the medium of exchange becomes generally circulating, this will be an advantage in daily use, and while the silks have been the origin (of the medium of exchange)

宜有變革。自今以後，所有莊宅交易，並口口所綿布綾羅綢緞等，先用交馬交易。一千市錢，以買土至其餘絲綵，亦科兼用。

the copper money has become the end. What was cheap in the beginning has become dear at last, and this causes a state of wretchedness which is very deep. If the laws dictates it to us, it is meet that changes are brought about. Hence from this day forward when farms, dwellings, slaves and horses happen to be sold, use shall be made of the silks, silk gauze, floss silk, and other varieties, formerly employed for this purpose. For what further is sold in the market to an amount of 1000 cash and a little more, both money and merchandise shall be used. He who acts against it shall be tried as a criminal.

It need not be said, that the Emperor's ineffectual measures did not improve matters of all. We again proceed to communicate the history of the miserable condition of Chinese society at that time, as stated by the chronicles, but soon we shall have reached the time that history is silent on the subject.

The ministers who commonly proved to possess more sense than their royal masters did not lose courage yet. A short time after the events mentioned above when the mass of bad money threatened to ruin trade, the prime minister *Li-lin-fu* proposed — a measure already practised before — to bring to market a quantity of silks, and to sell them for bad money.

復復市以國兵行之。門市忠部舊明日恩欲侍錢。日行揚招郎詔當鞭權楊

(He who made this known to the people,) the vice-president of the ministry of war *Yang-kue-tsi*, desirous of gaining power by means of public favor, exclaimed, cracking a whip at the gates of the market: "trade must come back, and to-morrow it will be decreed that the old money shall circulate again."

In the same way the government continued to cast money and to exchange it for the false coins. The consequence was not that

the people ceased to make false money, but that the taxes must be made heavier, and that the false coiners enjoyed the profits arising from this measure.

In 758 *Ti-wu-ki*, vice-president of the board of finances and shortly afterwards prime minister, brings another hackneyed proposal on the carpet, viz. the institution of a currency which, as a Chinese author on money says, was only a equivalent<sup>1)</sup> for money as it consisted of coins as large as the circulating pieces, but which according to their legend were worth from 10 to 50 cash. The law having so often been changed within a short time, prices rose enormously; for a measure of rice 7000 copper pieces were paid, and on the roads hundreds died of sheer want.

The people had at last recourse to stones used for grinding rice, which had a fixed value, and for that reason were called money with an intrinsic value in contradistinction to the money properly called, which had no intrinsic value. We read in Ma-twan-lin:

當交爲礮錢。易實礮由皆錢。鬻是用盧受錢十錢得。 Stones for grinding rice were received as money of an intrinsic value, and bartered for (real) money which had no intrinsic value (lit. hollow or empty money); they were (generally in use) to a value of 10 cash. In consequence of this, the money was called money of an intrinsic value, and money of no intrinsic value.

By way of a change we find now some statistical returns of what the people want to live on, together with an account of the money cast in the state-boundaries. The passage is remarkable as a counterpart of a similar account under the *Han*-dynasty (See page 48).

1) He uses the word 權 an equivalent counterbalancing against. The meaning must, however, be that it was a representative equivalent, which ought to counterbalance the real, a token-money.

當時議者。以爲自天寶至今九百餘萬。王制上農食九人。中農夫七人。上以中農夫計之。爲六千三百萬人。少壯相均。人食米二升。日費米百二十六萬斛。歲費四萬五千三百六十萬斛。而衣倍之。吉凶之禮再倍。餘衣十萬斛。以貴賤豐儉均也。相當。當米十三萬六千八災。三年之儲。以備水旱凶當。則米之直。與錢均也。相

At that time a councilor spoke: When we glance at the time elapsed from the period *T'ien-pao* (742) up to the present (763—65) there are more than 9.000.000 families. If your Majesty reckons that farmers of the first class procure food for 9 persons, and farmers of the second class for 7 persons, and you take the second class as standard (roughly calculated) it amounts to a number of 63.000.000 souls. If the weak and strong are taken together, one person consumes a quantity of 2 *sang* daily. Thus, 1.260.000 *hu* of rice are wanted daily. The annual necessary expenses (reckoned in rice) (for food of the people) thus amount to 453.600.000 *hu* (bushels<sup>1</sup>)). We reckon for clothes as much again, and furthermore for ceremonies and sacrifices which take place both in days of prosperity and tribulations still as much again. Now there remains the three years' store which is intended to relieve the misery arising from inundations, times of drought and other calamities; this represents a capital of 136.080.000 *hu* in rice. If we take the expensive, cheap, rich and poor sorts promiscuously, we reduce the value of that rice to copper money<sup>2</sup>).

1) A 升 *sang* is a little more than a liter. According to WILLIAMS, 1.031 liter.

斛 *hu* is here = 100 升. The measures in China have undergone frequent variations. From the calculation it appears that a year is reckoned at 360 days.

2) The councilor's meaning is, "By reducing this to money you can calculate how much money is wanted". An easy matter probably for his contemporaries who knew the price of a cup of rice, but for us this calculation is very difficult as the councilor does not state the price in money. His conclusion, however, is very uneconomical and he forgets that the money con-

stantly circulates, and in that way perform the same service in exchange repeatedly so that a people by no means wants quantity of coined money as would be necessary to pay for what the whole people consumes a year. Regarding the same question, which our Chinese adept in statistics decides without hesitation Dr. ADA SMITH in his "Wealth of nations" B. II. Chapter II observes: "What is the proportion, which the circulating money in any country bears to the whole value of the annual produce circulated by means of it, it is, perhaps impossible to determine. It has been computed by different authors at a fifth, at a tenth, at a twentieth and at a thirtieth part of the value."

of *King* and *Yang-tſeu*<sup>1)</sup>). Acting according to this principle the money will be increased daily.

Of the statistical returns of the amount of money cast at that time the following extract will suffice.

The total number of money-foundaries was 99, distributed among the provinces. Every foundary was worked by 30 men. Yearly, in every foundary, there were fabricated 3300 strings of 1000 cash (1 string was worth about six shillings). The cost of each string was 750 cash, so that the profit of the state amounted to 33 per cent. In the whole empire 327.000 strings of copper money were fabricated a year. Some pages further we read that an adept in money-matters proposes that in the foundaries still to be built near the Red Cliff 紅崖, the money should be cast in such a way that the cost of bullion, wages, and transport shall not exceed 900 copper pieces a string; then a trifle will float (will be the profit). 費費計錢九百。則浮本矣。

Now we find a series of reports from the comptrollers of the iron and salt duties, who earnestly complain of the bad money which they commonly receive, and in consequence of which the taxes do not yield enough to provide for the wants of the State. Matters were worst in the districts of *Kiang-huai*. Concerning this fact *Pao-ki* says: "When exchanging good for bad money we received a tub of tin, lead and copper promiscuously 並鉛錫銅盪. The influence thereof on the prices of commodities was enormous. Afterwards we still perceived a slight increase of bad money, and when we set afoot a strict inquiry in the several districts of this province, we found that in the mountains as well as in the flat country, there were subterraneous vaults containing

1) The provinces of *King-tſeu* and *Yang-tſeu* are situated west and east of the capital. The longitude of *King* is 109° 44'; that of *Yang* 117° east of Paris. The meaning is thus, throughout the whole empire.

**money cast by private persons.** The rascals and cheats who supplied **one another with this bad money in order to bring it in circulation had been steadily on the increase.** But now that the officials charged with this inquiry are aware of the real condition, and the way in which the false coiners dealt, they have instituted rewards and punishments in a very judicious way, and thus checked the **increase of these evil practices."**

Another provincial functionary states that in his districts the **money which still contained an amount of pure copper was melted and made into all sorts of objects, and the profit gained in this way was so considerable that he feared that if no severe repressive measures were taken, the time would soon come when there was not a single good copper piece extant.**

"**Of 1000 good coins they extract 6 pounds of copper, and when they melt this mass to make it into instruments and other objects, a pound of copper obtains a value of 600 *cash*.**" So they make a profit of 260 percent. He therefore requested the central board of administration to make severer regulations against the melting of money. The Emperor's decision is remarkable. His Majesty decreed that his people should be at liberty to melt money but that the tools made of the copper might not be sold at a price exceeding 160 *cash* a pound. In this way he thought to be able to make this occupation so little profitable that people would soon take a dislike to it. — One or two years ago M. EMILE DE LAVALAYE, of Liege, gave a discourse in the Students' Literary Club DOCTRINA at Leiden. His subject was that the decline of the States in ancient and modern times was chiefly to be attributed to the insufficient knowledge of Political Economy of their rulers. The absurd regulations of the "sons of heaven" often remind me of the

spirited and captivating *causerie*, and I cannot but regret that the learned speaker was not then acquainted with the history of money in China. He would without doubt have found it a forcible argument in favor of his somewhat hazardous hypothesis.

All of a sudden there shone a light through the Egyptian darkness which overhung the Chinese empire, but it was only a dim and faint glimpse, which was visible to vanish immediately afterwards, and its existence was even too short to give a satisfactory description of it. I mean the apparition of paper-money. History says:

錢。禁兆之。方。以軍進師。時復憲  
與尹號合輕諸奏委商禁宗以  
商裹飛券裝使院<sup>2</sup>。錢估<sup>1</sup>)用  
買武。錢。乃趨富及諸至銅錢  
飛請京取四家。諸路京器少。

Under the reign of the emperor *Hien-tsung*, because money was scarce again, the use of copper tools was prohibited. In that time travelling merchants who came to the capital brought with them the money they had received in the outlying provinces, and deposited it in a government bank. Likewise did military and civil officers and rich families, that they might travel unburdened through all parts of the country. (Instead of their money) they received certificates of indebtedness (lit. corresponding billets); these bore the name of flying money. The imperial governor of the capital *Pei-wu* proposed to suspend the issuing of flying-money to the merchants.

Man wird sich nicht mit Börs und Beutel plagen;

Ein Blättchen ist im Busen leicht zu tragen.

says Goethe in his splendid satire on paper-money (*Faust*, Part II).

Our Chinese chronicle says in prose very much the same, and surprising it is that an institution which would have proved to be a great benefit to the Chinese society of those days, was

<sup>1)</sup> 估 = 買.

<sup>2)</sup> 院 is the word generally used for bank.

abolished without so much as even to mention the reason why.

Yet shortly afterwards this apparition is seen once more, but still dimmer than the first time, and then it disappears altogether to return more brilliant and more fully developed 150 years later under the reign of the *Sung*-dynasty.

A little while after the short-lived apparition of paper-money, in the year 809 the quantity of money circulating in the capital was uncommonly slight, trade was dead, 非交易 and the money still in circulation was no more in demand. 錢行衢路者不問 Private persons tried to circulate silver money by working the silver mines in the *Wu-ling* mountains, but this was soon prohibited by government. Some high functionaries of the central board of administration then proposed to try once more paper-money.

Ma-twan-lin's communication is short:

貫與至然增錢。鐵部商頓滯飛自而商者。商給每三度人輕藏錢。京易人復人百千司支於請<sup>1)</sup>物家師之。敵許無錢。緡飛鹽戶許價有禁

Since the flying money was forbidden in the capital, the families had hoarded up the money in treasuries and the prices of commodities had somewhat fallen. (Some functionaries<sup>1)</sup> suggested to allow the merchants to have their salt and iron appraised at the ministry of finances, and that on the flying-money (which they received in return) from the mint-college, they were to pay a premium of 100 cash on every 1000 string. But when there were among the merchants none that went there, it was allowed again to give the merchants, the full value when exchanging their strings (for notes).

As has already been said, no further mention of paper-money

1) The names of the offices and functionaries are omitted. The names of all public functionaries of ancient and recent times are to be found in the Rev. MORRISON's Dictionary of the Chinese Language in two

官. It is a pity that the whole long list, which forms a volume by itself has been put together without a practical method or arrangement.

is made. Probably the credit of the state was so shaken that the people did not venture any more upon paper-money.

One tyrannical measure now succeeds the other. A decree was issued ordering that nobody was allowed to possess more than a certain amount of copper money, and those whose treasure of copper money exceeded this sum were obliged within a fixed time to exchange it for government products; state-officials residing in the market for that purpose. But as the merchants tried to make some profit by that exchange, a full year had elapsed and the decree had not been carried into effect. Severe measures were then taken to execute the laws.

錢。是犯不限一過市。至并官僚十二年。勅自今文武  
而競者。得內月此。不得過市。所有士庶。不問品秩。  
高買白過未許。從五商旅。見錢。觀坊下。  
貲地身<sup>1)</sup>兩了。別勅出。私貯。寺中使。高  
大屋人月。更請物收。見錢。觀坊下。  
價以處限。請限貯。後如錢。觀坊下。  
變死。滿限貯。後如錢。觀坊下。  
其於違亦如限有並坊下。

In the 12<sup>th</sup> year (817) an imperial decree was issued that from that time forward all civil and military officers without any distinction of rank, together with all functionaries charged with the government of provinces and districts down to the subalterns and soldiers, all merchants, monasteries and temples, hamlets and market-places might not possess more than a sum of 5000 string in ready money. When there were whose fortune exceeded that sum the decree allowed them a month's time to lay out their money in the market. If (after that time) there were who had again received and hoarded up money, they requested a second respite, if they had not been able tot get ready in the first, but this last respite might not exceed two months. When those respites were past, such private persons<sup>1)</sup> as had violated and transgressed the law

<sup>1)</sup> 白身 = 白徒 private persons Cf. *K'ang-hi's dictionary in voce 白*.

were put to death. Then the people bought on a large scale farms and houses to convert their fortune (into landed property) and precious things fetched high prices.

Now Ma-twan-lin takes up the pen in order to show the folly and uselessness of those last regulations. Since his criticism on the financial system of the *Ts'eu*-dynasty he has been silent, except some explanatory notes to elucidate the texts he quoted. But now that no voice is heard of the ministers or learned men of the time to pronounce judgment on such arbitrariness, he addresses us himself, and in a few lines he gives an excellent critical review of the absurdity of such measures.

流 畏。立 故 田 不 可 限 豪 徒 產 者。○ 按 後 之 爲  
 通。蓄 法 必 民 強。欲 以 均 貧 富。民 之  
 初 錢 以 繢 名<sup>1)</sup>兼 設 法 以 制 民 國  
 不 者。限 志 甚 限 田。并 之 以 為  
 煩 志 上 於 然 蓄 猶 之 富。而 之  
 上 於 頗 人。併 買 錢。云 徒 限 而 之

When we observe those who afterwards governed the country, they were not able to regulate the wealth of the nation in such a way that they made the condition of the poor and rich equal, and they tried in vain to invent means to check violent and oppressive actions. What regards the bringing of all into one hand, it was to be tolerated, when the people were prevented from bringing the fields under their names<sup>1)</sup>, but to prevent the people from hoarding up money, is that not a little too bad? For he who buys land intends to engross all, and therefore those who are at the head of the affairs should surely make regulations by which this enormous possession of landed property (lit. *King* and *Men*, both superficial measures) is restricted. Those, however, who board up money have made up their minds to make it stream and to circulate it. In the beginning the rulers of men did not trouble their heads about the enactment of laws teaching the people how to exert

1) 名 name — is here in the position of a transitive verb with 田 as its object I have not found another instance of that particular use of the noun.

之。人。立。法。以。教。  
 擾。之。門。而。重。爲。煩。耳。驅。之。徒。開。告。以。正。我。所。藏。然。故。以。  
 取。樂。鑑。逐。利。人。者。輕。錢。重。物。輕。之。限。之。錢。重。物。遷。也。今。  
 不。必。設。是。禁。心。乘。之。正。我。所。藏。然。故。以。  
 誰。無。是。人。者。輕。錢。重。物。遷。也。今。

themselves to turn over their capital. Now because the money is heavy and commodities are light (because money is scarce and commodities abundant) they have put a limit to the hoarding up of money; but the fact that there is such a proportion between money and merchandise (lit. that moncy is heavy and merchandise light), is for those who possess ready money and are greedy of gain, an intelligence at which they rejoice. For who does not cherish in his inmost heart the thought, what others cast away I take. Verily, it is not necessary to make prohibitions by law to force them to this. This only opens the door for accusations and complaints, and causes needless vexations in a high degree.

A few more pages of our chronicle we have to wade through before we are at an end. But all is barren from Dan to Berseba. Fresh regulations on the possession of a certain amount of copper money were issued. Whereas in the foregoing parts we have often seen that among the ministers of State and the high functionaries many an enlightened councilor succeeded in preventing the bad measures which the government was about to take, of the addresses which in these days are presented at court the one is still more absurd than the other. As there was nowhere any longer money on hand, the attention of the government is directed to the temples of Buddha, with their bulk of metal statues, tools and vessels. So the following decree was issued:

禁 鈕 鐵。銀 爲 像 太  
之。得 唯 鍮 之 以 和 三  
用 鑑 石<sup>1)</sup> 飾。鉛 年。  
銅。磬<sup>2)</sup> 烏 帶 錫 詔  
餘 釘 油 以 土 佛  
皆 鑄 藍 金 木

In the third year of the period *Tai-ho* (829), it was ordered that the Buddha-figures and ornaments should be inlaid with lead, tin, clay, or wood, and to make the girdle either of gold, silver, brass<sup>1)</sup>; or steel blued and polished. Only for mirrors, gongs<sup>2)</sup>, nails, rings and buttons., copper might be used.

The attention of government once directed to the temples, it was not long before religion itself was laid under requisition.

Because the Empire was in want, the service of Buddha was abolished by the Emperor. Our chronicle says:

多 院。鑪 以 官 屠 及  
矣。州 鐸。銅 李 法。武  
縣 皆 像 郁 永 宗  
銅 歸 鐘 彥。平 疾  
亦 巡 磬 請 監 浮

several districts of the empire a large quantity of copper would certainly be found.

The Emperor Wu-tsung having abolished the so-called *Feu-tu-* (Buddha) service, *Li-yeu-yen*, the director of the mint in *Yung-ping* proposed to have all the copper statues, mallet-bells, gongs and clapper-bells confiscated by the body of itinerant officials. In the

But enough of this. Intestine division and anarchy increase more and more. However brilliant and glorious the beginning of the *Tang*-dynasty had been, the end was most miserable. Our history is silent on the last 40 years of the existence of this imperial line. In what way a new creation sprung forth from this chaos will be shown in the next chapter. With the end of the rule of the *Tang*-dynasty Ma-twan-lin closes his eighth volume.

1) 鍮石 a sort of brass resembling gold. It is imported from Persia.

2) 磬 a musical stone, suspended on a frame, one of the eight musical instru-

ments, says MEDHURST, was struck in the temples to call the people to prayer. A gong is properly an instrument used in the army, a brass drum 鐸。

## CHAPTER V.

### HISTORY OF THE MONEY UNDER THE SUNG-DYNASTY.

THE 5 IMPERIAL FAMILIES. — FREE COINING AND ITS EFFECTS. — A CONFLICT BETWEEN CHURCH AND STATE. — SPEECH OF THE EMPEROR AND REPLY OF AN ECONOMIST BELIEVER IN BUDDHA. — THE SUNG-DYNASTY, NEW REGULATION OF MONEY-MATTERS. — THE HISTORY OF THE DOUBLE STANDARD IN CHINA. — THE ECONOMICAL INNOVATIONS OF WANG-GNAN-SI. 1<sup>o</sup> STATE ADVANCES TO CULTIVATORS OF LAND. 2<sup>o</sup> PROHIBITIONS AGAINST THE EXPORT OF COPPER SUSPENDED. — AN OLD WAY TO PAY NEW DEBTS. — CRITICAL OBSERVATIONS ON MONEY BY TUNG-LAI OF THE FAMILY LIU.

---

Many years were yet to elapse before the end of the reigning dynasty was near, and China was delivered of the weak and despotic descendants of the duke of *T'ang*.

But the fall of this dynasty made, if possible, matters worse than ever. The chief generals did quarrel and fight among themselves; anarchy and confusion ran riot, and the country was lacerated as before by civil war.

Within the time of 53 years (907—960) there reigned five different imperial families; two of these were of Tartar origin. In these times of commotion and bloodshed, the monetary history is confined to the abolishment of the existing and the introduction of all sorts of restrictive measures, which were as thoughtless and tyrannical as those described in the preceding chapter. The following are some loose fragments which give an insight into the political and economical state of affairs and which also in a grammatical point of view are the most remarkable parts of Ma-tuan-lin's book.

法。今鑄銅器。鑄錢雜以鉛錫。缺小違條。今後祇官鑄造。私下禁舊。鑄除鑄錢外。不得接便別鑄。永遠爲主。官中不取課利。廢銅冶許百姓取便開鍊。久文。許鑄錢仍以天福元寶爲左環讀之。諸道應有久府。鑄無聞。宜令三京諸道州資。晉天福三年詔曰。國家所

In the third year of the period *T'ien-fu* under the reign of the (later) *Tsin*-dynasty (938), a proclamation was made in which was said, "A heavy medium of exchange constitutes the wealth of a state. And though a quantity (of coins) are cast equal to the number of wood-worms, even then it will be (a thing) unheard of that there will be coined too much. It is, therefore, proper to issue a decree that in the three capitals and in all the country-towns<sup>1)</sup> everyone without questioning whether he be a public or private person, shall be allowed to cast money according to his being possessed of copper." The legend of this money was. "First treasure of the period *T'ien-fu*." These words were read in a circle (beginning from the top) to the left<sup>2)</sup>. In all the provinces the people were allowed to take possession of the copper-foundaries which were not used since a long time, and to open them immediately for the purpose of melting copper ore. It was ever of the highest importance that, as henceforth the government did not enjoy the profits any more, besides the casting of money, the permission did not include the casting of copper tools<sup>3)</sup>.

In the fourth year (940) an imperial decree enacted that henceforth the money should be cast by the state exclusively, because in the whole empire everybody had cast money which was adulterated with lead and tin, which was bad and small, and (because the people had disobeyed the prescribed regulations. Private persons were since that time checked again by the old restrictions.

1) lit. in all the towns of districts and provinces. 道 and, as we shall further see,

路 are both used as denominations of

political divisions of that time

2) Cf. page 102 on the signification of the left and right side of a coin

3) lit. With this was not connected the separately casting of copper tools

Notwithstanding the imperial decree (See Chapter IV p. 125) the people had remained faithful to the creed of their fathers, and when under the Later T'seu-dynasty (951—60) there was again a great want of money, Buddhism was once more laid under requisition. But this time it was ordered that all persons throughout the kingdom should sacrifice to their country their Buddha figures, and what copper vessels, utensils, etc. they might be possessed of.

On occasion of a levee at court this measure is made public by the emperor himself in a remarkable speech which he delivers in order to remove the religious scruples and misgivings which his faithful subjects might have. The address of the Emperor is followed by a (reply of one of the high state-officers,) who does not only prove to be a staunch adherent of Buddhism, but also develops his economical objections to such a policy in a very sensible and frank manner.

亦身以雖佛。佛像奉苟以佛卿上。  
非可布頭志耶。者。佛志善爲輩謂。  
所以施。目在且豈矣。於道疑。勿侍人。  
惜濟若猶利吾所彼善化夫以人。

The emperor addressing his attendance, said: "Noble servants of the crown! It is not my intention to raise doubt among the people by the confiscation of the Buddhas. Buddha indeed makes men better by leading them into the right path, and when our will is directed to the good, we must honor Buddha. But are those copper statues really what is called Buddha? Moreover I have heard that (the tendency of the doctrines of) Buddha is to benefit the people. And though your face is still opposed against these figures being spread and sacrificed (i. e. when your feelings are against it) (be not afraid, for) as long as Our Imperial Self has the power to promote the interests of his subjects, there will be no reason to pity (them).

1) Remark 矣.

When money is melted to make tools of it, a tenfold gain is made by it. And is it now allowed (so people argue) that the money which serves as an equivalent for all other merchandise, whether its value be on a par, high or low, and that is cast by the government without reckoning the cost and without regulation when it shall cease, is melted without any prohibition<sup>1)</sup>?

Notwithstanding it is a fact that it is melted and that tools are made of it, the money though gone, these tools remain!

Now if these tools are scattered over the four frontiers of the empire, (if they are) transported by freights and cartloads, carried into foreign countries, and come back again to the southern Barbarians, what then

"les princes des dynasties postérieures il "n'y a en que *Hu-ti*, de la dynastie des "Liangs, qui ait occupé le trône pendant "quarante-huit ans, et que n'a-t-il pas fait "pour obtenir de Buddha la paix et la fé- "licité? Il s'est vendu jusqu'à trois fois et "s'est fait esclave dans un de ses temples! "Et sa récompense fut de mourir misérable- "ment de faim. Cependant, il ne faisait, "disait-il, continuellement ces actions, si "peu convenables à un prince, que dans "l'espérance du bonheur qu'il attendait de "Buddha, et il n'en a été que plus mal- "heureux. . .

"Buddha n'est qu'un homme originaire "d'un royaume des barbares de l'occident "de la Chine, qui ne connaissait ni la fi- "délité qu'un sujet doit à son prince, ni "l'obéissance d'un fils à l'égard de son père. "S'il vivait encore, et qu'il vint à votre "cour, tout ce que votre Majesté pourrait "faire, serait de le recevoir avec magnifi- "cence, de lui faire quelques présents et "d'envoyer le reconduire jusqu'aux frontières "de l'empire, sans que vos peuples y eus- "sent le moindre part. Cet homme, ce "Buddha est mort depuis longtemps, on a "présenté à votre Majesté un os desséché, "qu'on dit être de lui, aurait elle dû "le recevoir dans son palais? J'ose donc "lui demander, qu'elle fasse remettre cet "os entre les mains des censeurs de l'em- "pire, afin que le faisant passer par l'eau "et par le feu, on abolisse ce culte si per- "nicieux. Si Buddha est tel qu'on le dit,

"qu'il ait le pouvoir de rendre les hommes "heureux ou malheureux, je consens que "tous les maux qui en pourront arriver "tombent sur moi, tant je suis persuadé de "son peu de pouvoir".

Under the Emperor *Mu-tsung* he was restored again to his high office, and was appointed generalissimo of an army with which he crushed a rebellion in the North of the Empire (DE MAILLA Hist. gén. d. l. Chine tome VI p. 439. etc.). When by his efforts peace was restored "*Hu-tsung*, lui donna un emploi, dont la juridiction s'étendait sur tous les soldats, ce qui leur inspira tant de crainte qu'aucun n'osait manquer à son devoir". This *Hu-ši* expresses by 神策六軍 where he says:

Even he, the vehement antagonist of Bud- dhism, when appointed commander-in-chief of the whole imperial army durst not violate the law, and abolish the statues of Buddha.

**左右神策軍** The right and left army of divine stratagems. Name of an army, which distinguished it- self on the Western frontiers of China. It continued to be a honorary appellation till the time of the *Kin*-dynasty. MORR. in voce

**官** n° 84.

1) Yes, it is allowable, is the meaning of *Hu-ši* with this question; for when the money is melted, the tools remain hence no wealth is lost.

遷車轉。入於他國歸。於蠻夷其害豈特爲害而已。而不聞世宗禁之。則不以泉貨貿遠方之寶。可知已錢之散也。以貿遠方之寶故也。上好之下效之。於是關防不嚴。法制隳壞。真錢日少。僞錢日多。以不贊之價。雖萬物靡有限之錢。雖萬物銅陰陽爲炭。亦且不給。區區器像。又何濟。

constitutes the proper loss, (lit. what of that loss is then specially the loss), and if you can tell me that, I am satisfied (lit. and stop there, *nihil amplius*).

But I am not aware that the emperor Ŝi-tsung has prohibited it (the melting of money)<sup>2</sup>). Now if the treasures of far-off countries are not exchanged for currency, may I know how the money is spread? Why, it is indeed because the treasures of distant countries have been exchanged for it<sup>3</sup>).

[The speaker now abruptly leaves this subject and proceeds with detailing the reason why the want of money should be attributed to no other cause than the badness of the quality].

What the great ones are fond of, the lower orders like to imitate. The government makes the money bad, and the people follow the example. In addition to this, the official seals are not well sunk, and the legal regulations (respecting the coining of money) are violated. The money which has its full intrinsic value becomes scarcer every day, whereas the false money increases daily.

Truly, when it (the money) has no more the price (value) of a precious object, and (when) the money which has certain limits, is no more extant, were all creation of copper, and the whole world (lit. all that

1) **歸** Come back to the Barbarians is i. e. the native copper which we have received from the Barbarians, comes back to them made into all sorts of tools. Copper was also imported from Persia.

2) These words should have been spoken in the beginning of the speech, but in consequence of his meditations on "the Mercantile System," the speaker had lost the thread of his argument, and takes it up to drop it immediately afterwards.

3) He means to say — You, ministers, think that the money, if spread among the people, gets lost because it is melted, and

that this is prejudicial to the country and the people. But you are mistaken; we get in return the treasures of distant countries and you are misled by the fact that it does not go away in the form of coined money with which these treasures are bought, but in the form of copper tools. But the people melt it, and make tools of it because the Barbarians give ten times more for a quantity of copper in the form of arms and tools than in the form of coined money. *Hsü* is an admirable economist, but it is a pity his reasoning is not a little clearer.

上可國不具嚴而人後廉乎。  
矣。流之廢。在密。又之可無故。  
於錢。則鼓法關共蓄欲。惟  
地真中鑄制防寶。生然至

is light and dark) of charcoal, it would nevertheless be impossible to supply what is wanted. And how could the few tools and Buddha figures bring about a change in this. Therefore, only when without cupidity the utmost disinterestedness is observed, we shall succeed in producing for the people a common treasure which has an intrinsic value. Moreover, if care is taken that the seals are well sunk, and the legal regulations are maintained, and the casting (of money) is not discontinued, the money of the Middle Kingdom shall really be able to stream throughout the most exquisite of countries.

#### THE SUNG-DYNASTY.

The people and the army, impatient of the perpetual change of princes and families, had got such a strong dislike to their insignificant rulers, often mere infants, that they had already long looked out for a leader firm and energetic enough to restore order and peace in the confused realm. And when they thought to have found such a man in their favorite general, they were quite ready to rise in his favor and drive away the reigning sovereign. An opportunity to carry out this bold resolution soon presented itself. After the death of *Si-tsung* a child having become emperor under the regency of the Empress-dowager, the *Liao* Tartars had taken advantage of this circumstance to invade China and extent their territory. To check the further progress of this formidable foe, a numerous army was sent out under command of the idol of the people, the generalissimo *Tsao-kwang-yin* 趙匡胤. One evening when the army lay

<sup>1</sup> 嚴密 lit. to keep diligently.

encamped near the capital and the commander was soundly asleep, he was roused by a stir without. On leaving his tent he saw a clamorous crowd of officers and soldiers who had just returned from a public meeting in which their general had been proclaimed Emperor; and before he was but half apprised of the cause of all this noise and uproar, the yellow mantle, the emblem of the imperial dignity, was thrown over him and he was hailed as "the Son of Heaven." The new-made emperor returned immediately to the capital where he was enthusiastically welcomed by the people. The boy-king abdicated of his own accord and the revolution was accomplished without the least violence, without so much as even the shedding of one drop of blood. *Tai-ts'u* was the name of the emperor and the dynasty was called the Sung-dynasty after the district of *Sung-t'seu*, of which he had been Governor. When hearing that the renowned warrior had ascended the throne, the Tartars lost courage and retired into their own dominions. The new emperor immediately applied himself to remove the evils which had arisen in the last reigns and was careful in adopting all such measures as promoted the welfare of the people.

Among others the monetary system was completely re-organized. A new sort of copper money was made, bearing the legend of "Current treasure from the beginning of the Sung-dynasty." **宋元通寶**. The decrees by which people were forbidden to possess more than a certain amount of copper money were annulled, and in different parts of the country copper-foundaries were built, bearing such promising names, as "The Eternal Prosperity," "The Eternal Peace," "The Long Repose," "The Flourishing Country," "The treasures-producing Mint," and iron-foun-

daries styled "Beneficial to the People," "To the support of all," etc.

The two most remarkable events, however, recorded in the history of the money were, 1° the introduction of the double standard, and 2° the issue of paper-money.

As to the former, I have carefully collected all the passages in the Chronicle referring to this subject in order to be able to give a complete history of the double standard in the Chinese Empire.

Paper money forming one of the most interesting subjects in the history of Political Economy, a separate chapter has been devoted to all the matter relating to this currency under the *Sung-dynasty*.

#### THE DOUBLE STANDARD.

The want of a sufficient quantity of copper very probably gave rise to the use of iron-money. This new currency was first made by private persons at the close of the period of the "five imperial families," and during the reign of the *Sung* it was circulated in large quantities by the government without however superseding the existing copper money. It was principally in the western provinces of 四川 *Sse-ts'uen*, 陝西 *Sen-si*, and in the eastern tea-districts of 福建 *Fu-kien*, that this iron money was employed in large quantities. The legal ratio was such that 10 ironpieces had the value of 1 copper coin, 以鐵錢貿。凡十當銅錢一。but it is evident that those pieces of the different metals were not equal in size. For we read, "that the Emperor built three state boundaries for casting iron money; and that a string of the money made there was to have a weight of

12 pounds and a few ounces in order to correspond in worth with a string of copper money weighing 5 pounds exactly." The calculation occurring in another fragment [Ma-twan-liu IX 7a] varies, though the relative values are nearly the same.

其千。鐵有六十九○  
大重二奇分兩。凡  
法也。百贏。鉛十鑄  
也。九四鑄錫分得銅  
十二兩。大居錢錢。  
此錢用皆居八八

"In the casting of money a composition of 88 ounces was commonly used, and the thousand coins made of it weighed 80 ounces. Of the 10 parts of which that composition consisted were 6 parts of copper and 3 parts of lead and tin. Of all these there was an overplus (i. e. a little more of each of the three sorts of metal was used

in order to make up the 10th part). In the casting of iron money 240 ounces were used, and the thousand coins made thereof weighed 192 ounces, this was the general rule." (80:192 = 5:12.)

This copper money contained 3 pounds and 10 ounces of pure copper, and 2 pounds of alloy. The alloy was composed of 1 pound 8 ounces of lead and 8 ounces of tin; and about 8 or 10 ounces were lost in the process of making it. From this account it appears that the relative worth of the two metals was about as 1 to 3.5 and not as 1 to 10 as we should presume from the above citation (p. 134). Ma-twan-lin, it appears, feared obscurity from these contradictory passages, and therefore he says in a note, that the little iron pieces, 10 of which were worth one cash, had been abolished, and that at the same time the relative value of iron and copper money had been altered, as the iron money circulating in the province of Sze-ts'uen of the nominal ratio of from 10 to 1, in weight, gave a ratio of 25 pound of iron to 5 pound of copper; accordingly a real ratio of from 5 to 1. This had not been done to depreciate iron money, but simply as a measure of utility, because the

magistrates of the districts where iron money circulated, had perpetually complained that the money was so heavy that it was not possible to make use of it, and — says one of them — “if it was made a little lighter of weight, it would have this advantage that one might easily equip one's self for a journey” **錢輕則行者易齋。** The weight of this iron money was likewise the cause that paper money was frequently used in those districts, as we will see in the next chapter.

In consequence of the use of two sorts of metal as currency, the Chinese got in greater difficulties than any European government has ever been on this account. The objections to the use of the double standard, if stated by a thorough Chinese, would be of quite a different nature from those which French and English economists have raised in a great number of books during the last 30 years. Were it not that seen from a Chinese point of view the question presents some new aspects interesting enough, I certainly should not venture once more to treat of it.

We have not as in Europe to do with two precious metals like gold and silver which drive each other out of the country as soon as either of them is overvalued, and oblige the governments to buy back the runaway servant at a high price of their neighbors; in China foreign trade had in this respect very little influence on the prices of bullion. The great drawback, however, was this, that the intrinsic value both of iron and copper was so little that it was not possible to estimate a constant legal ratio between them. Further, what lately, wherever in Europe the double standard is adopted, has been effected by the free market of foreign countries, was done in China by the false coiners.

These persons speculated on the relative value of the two sorts of money, which constantly varied, and they always coined the cheaper currency in order to exchange it for the dearer; and the difference was not 2 per cent, as in the Netherlands from 1816—1839, or even less, as in France up to 1869, but generally from 100 to 200 per cent, and this caused that the depreciated currency circulated at a high premium, or was peremptorily refused in the market. It is also remarkable that in order to remove the difficulties of a double standard, the Chinese financiers at length took the very same measures as afterwards were taken in Europe; they instituted again the single standard under the flag of the bimetallic system.

All along the western frontiers of China, from the southern provinces of *Yün-nan* and *Sse-tsh'uen* to the North-western province of *Sen-si*, a numerous army was constantly kept in the field to resist the warlike Tartar tribes who perpetually invaded the Middle-Kingdom.

Great sums of money were required to provide such a host with provisions and arms, but the large supplies of money were not sufficient to meet the ever increasing want. Some magistrates of those parts then suggested that at those places in the mountains where considerable quantities of metal were found, forges and foundries should be erected. This plan was acted up to. But now it occurred that in some districts the mountains contained much iron and hardly any copper, and as each of the magistrates of these districts wished to have some money at his disposal, they sought and obtained the permission of the Central board of administration to cast iron money. Ma-twan-lin says on this subject:

既而陝西都轉運使張奎。知永興軍。茫雍請鑄大銅錢與小錢兼行。大錢一當小錢十。奎等又請因晉州積鐵鑄小錢。及奎促河東。又鑄大鐵錢於晉澤二州。亦以一當十。以助關中軍費。未幾。三司奏罷河東鑄大錢。而陝西復采儀州竹尖嶺黃銅置博濟監鑄大錢。朝廷因勅江南鑄大銅錢。而江池饒儀虢州。又鑄小錢。悉輦致關中。數州錢雜行。

*T*šang-kuei, the head official for the transport of government goods, in the province of Šen-si, and *Fan-ying*, the civil magistrate of the headquarters of the army in the district of *Yung-hing*'), had already proposed to cast large copper coins which were to circulate together with the small coins, (in such a way) that one large piece should be worth 10 small pieces. (*T*šang)-kuei and others had also suggested, there being plenty of iron in the district of *Tsin-tšeü*<sup>2</sup>), to have money cast there, and when (*T*šang)-kuei was obliged to go to *Ho-tung*, he had in the provinces of *Tsin* and *Tse-tšeü* large iron coins cast, one of which was again worth 10 small coins, in order to meet the expenses of the army encamped in *Kwan-tšung*<sup>3</sup>). A short time afterwards the mint-college (reported) that east of the *Hoang-ho*, the casting of large iron coins had been discontinued, and that in Šen-si (thus West of the *Hoang-ho*) the people again ran after the yellow copper of the mountains of *T*šu-tsien-ling, in the district of *I-tšeü*, where the foundary, "the Universal kindness", had been built for the fabrication of large money.

In the name of the government it was, therefore, ordered that in Kiang-nan large copper coins should be cast, and that in the districts of Kiang-Tsi-Sao-I-and Kwo-t'seu small iron coins should be cast, and

1) Prov. of Sse-t's'un. 知 lit. to know, is the title given under the *Sung* and subsequent dynasties to a civil magistrate appointed governor of a district. 知 ... 軍 lit. knowing the military affairs

was the title of the same official in the headquarters of an army in field.

2) In *Ho-tung*, prov. of 山 西.

3) 關中 *Kwan-tung* is an ancient name of the province *Shen-si* and adjacent parts of *Ho-nan*. MAYER, II. 309.

of the mint-college 三司度支判官 proposed as medicine, to melt copper and iron together, and to make the weight of a coin cast of that mixture, equal to that of the circulating copper money, and to determine the proportions so "that one piece 贏。皆居三而 contained three parts of copper and six 有六分銅 parts of iron, and of both metals a little 奇分。鐵居 more for the remaining 10<sup>th</sup> part". In this way, "he was convinced", as good a currency might be made, while the cost of fabrication should be less and the profits of the government larger. The fun of the whole thing was that when this worthy assayer made a trial in his mint to cast money in this way "the workpeople 無之。工多鐵 took a dislike to it, as the iron was too 成。後人不識 hard of nature and therefore too difficult 卒苦就。而 to work, while the quantity (i. e. the real value) did not come up to what it should be; soon afterwards it was, therefore, not made any more" (Mat. IX 7a).

Very sensible, however, was the advice given by a committee, appointed by the emperor to make an inquiry of the advantages and disadvantages arising from the use of the double standard. This committee consisted of the mint-college 三司, together with *T's'ang-fang-ping* 張方平 and *Sung-k'i* 宋祁, two men of high reputation in those days<sup>1)</sup>, and the cabinet-minister *Ye-tsing* 葉清, who before being a minister had been member of the mint-college, and has held that office after his resignation. The report of this committee suggests: 1<sup>o</sup> to fix a better ratio between the value of large and small copper money, and 2<sup>o</sup> to determine the relative value of copper and iron money. A deputation of

1) Cf. MAYERS, I. 9 and 639.

two members of this committee went to his Majesty, as soon as the report was ready, and spoke about these words:

“Your Majesty when instituting the large copper money had thought to derive great profits from it. So it promised to be in the beginning, but when afterwards, in consequence of the little metallic worth of that money, the prices of all articles rose, that wrong proceeding at last made reprisals on the government, 終取償於上。and by this you have lost in the end more than you had gained in the beginning. And even though your Majesty were inclined to reduce the present money which has an empty name to its real standard, and were willing to put up with losses, as by repairing the bad condition you will not escape to suffer the loss yourself, yet we fear that this new regulation will not easily be brought in execution”.

“Now we would recommend you to make the value of one 銅一大 piece of the large copper money equal to three 錢當銅 pieces of the small copper coins, in the different 三。小錢 districts where both sorts are in circulation”.

“The reason, however, why at present the false coiners do not exclusively occupy themselves with the casting of iron money, is that they can gain more by casting the large copper pieces. But as soon as the exact ratio between the copper coins is restored, they will cause new confusion, because they will then make small iron money. To prevent this likewise we would furthermore 銅錢以 suggest to you to make it a general rule that three 錢三小 pieces of iron money shall be equal in value to 一。當鐵 one (small) piece of copper. Moreover do we

advice you to cease the building of state-boundaries on such a large scale."

The emperor consented to all this and made use of the advice given. The government went even further by estimating the relative value of the large and small currency of both copper and iron as 2 to 1. False coining was entirely discontinued, and the manifold complaints of suffered wrong, made since a long time, were not heard any more.

The apprehensions of the committee that the new regulation should cause difficulties proved to be well founded. For the Western parts of the country were choked with iron money which now, it is true, had obtained a certain worth in relation to the copper money, but which, on account of the little stability of its worth, proved to be unfit to serve together with the copper money as a measure of value. They experienced the fatal consequences, but missed the right understanding which would needs have led to a satisfactory solution of this knotty question. In order to get rid of the great mass of circulating iron money, the government determined to buy one pound of this iron money at 40 pieces of the new copper coin which was reduced to a value of 2 cents. 折二錢; but enacting this law they committed the fault not to stop the circulation of iron money as legal tender. What now happens is communicated by a head-official for the government transports in a report to the central board of administration: "For 40 copper coins", he says, "we get one pound of bad iron money, and 1000 pieces of small copper money may be exchanged for 1000 iron pieces of a value of 2. A thousand small iron pieces contain 6 pounds of iron, and if people cast 2000 pieces of it, and exchange them for 1000 copper pieces,

the government, in my humble opinion, sustains a considerable loss". (This is perfectly right; the loss amounts to more than 50 per cent, for 1 pound of iron = 40 copper coins, thus 1000 copper coins are worth 25 pounds of iron, and if 12 pounds of iron made into 2000 small iron pieces, are exchanged for copper money, 1000 copper coins are received for it).

"It is a wretched condition because the iron pieces reduced **其錢折半。才二** bullion at half the price which they have as coined

**易大** money". That the difficulties of the double standard were not solved as yet, appears further from the statements communicated by the historiographer *T'seu-yin* in his report to the Emperor.

又後來減爲折二。已於國家貨起初元以一當十。後來減爲折三。近歲猶有萬餘貫。在民間收藏者。不計其數。官中積聚。又有數百件。上件者。利倍。又訪聞得所在。而民間盜鑄者。費少。用一當二。鐵錢易得。而利倍。又訪聞得所在。而民間盜鑄者。費少。用一當二。鐵錢易得。問其本末。蓋是錢法。路。伏見盜鑄錢不少。御史周尹言。臣去冬奉使經由永興秦鳳。

The imperial historiographer *T'seu-yin* spoke as follows: "Your servant set out on a journey in the winter, when he was sent on a mission. When passing through the districts of *Yung-hing*, *T'seu-* and *Feng-t'seu* he has secretly observed that false coining is not inconsiderable, and when inquiring into the cause and effect, it appeared to him that it was because the decrees regulating the relative worth of the money (lit. the money law) made 1 piece (of copper) equal in value to 2 pieces (of iron). The iron money is easily to be had, and the false coiners among the people make a double gain at little cost. I have also set afoot an inquiry, and I am informed of the amount of money treasured up by the functionaries; it amounted to a quantity of about 1.000.000 string. What is saved by the people is not so much. When in the beginning the relative worth of the money was estimated

重貨十損其八。若更作一文行用。卽又損一分。所以不當輒有奏請。若改鑄之法。或只仍舊作折二錢。卽民間盜鑄定亦不可止絕。臣欲望作折二鑄錢。更不行改鑄。亦不須揀選。起自今後。只作一文行用。則盜鑄者所獲之利。不充所費。自然無復冒禁作過歲省重辟。而農商交易。所獲衆貨流通之利。且約官中所有。止就四百萬貫言之。若以二爲一。卽猶得二百萬貫之數。致力簡省。便可得用。

they began in the very first times with making 1 piece equal to 10. Then it (the value of 1 piece) was lowered and reduced to a value of 3, and last year it was changed again and the value reduced at 2. So, on the heavy medium of exchange instituted by the government, people have already suffered a loss of 8 parts on the 10. Now if you again make (a change) so that the pieces circulate and are employed at the worth of 1, you will again cause a loss of one part (to the present owners of the money). In what way you should not make such sudden change, the memorial will suggest to you.

If you, when recasting the money, continue as before only to make pieces which are worth 2, you shall not be able to succeed in checking the making of false money among the people. But now your servant wishes you to cease making those pieces of 2 cash when you cast money, and then not to have them (the now circulating 2 cash coins) separately recoined so, nor is it then necessary to sift and pick them out (to withdraw them). But if from this time forth you begin by making only pieces of 1 cash, and by bringing them in circulation, then the profit gained by the false coiners will not even be so great that the cost of fabrication can be defrayed by it. From that time the violation and transgression of the laws will not occur again.

The annual decrease (of money) will be considerable and visible, but both agriculture and trade will reap the fruits thereof that all articles stream and circulate. And, furthermore, if the money treasured up by the government amounts, for instance, to about 4.000.000 string, and those coins which are worth 2 are made into pieces only worth 1,

then, obtaining 2.000.000 string, it is true that the power (i. e. the wealth) of the state will have been condensed and curtailed (but on the other hand it is also true that) it will be very convenient in use.

The measure which at length was resorted to and which solved the question in some degree at least, was to regulate the circulation of iron and copper money in such a way, that in some parts of the empire only copper money and in others again only iron money should be employed, by which the speculations on the relative value of the two metals, if not entirely, at any rate was prevented in the main.

Ma-twan-lin has the two following passages bearing upon this reform, and the fact that a period of more than a century has elapsed between the events he communicates (1075—1191) may serve as another evidence that the regulation, by which certain districts were bound down to the use of a certain sort of money, was the measure which was attended with the best results in the given circumstances. [Matw. IX 14a—15a and 23b].

無之深條沿本交錢北曰。還蘇戶由所重法。邊朝易幣。界臣論轍部止。在而雖禁銅並公別切事北侍本勢利極錢錢。使私無見宜使郎

The vice-president of the ministry of finances *Su-tše*<sup>1</sup>), who as envoy had returned from the north, speaking about the condition (of the money in those parts), and what ought to be done (to work a change in it) said: Your servant has carefully observed that on the northern borders especially, there is a want of medium of exchange<sup>2</sup>). In all commercial transactions of private persons as well as of the government, the copper money of our present dynasty is exclusively employed. Notwithstanding the restrictions and laws are very severe, by which the export of copper along the frontier is prohibited, yet the profit it yields (to export copper) is so great a power that there exists no means to stop it.

1) Cf. MARSH. I. 624.

2) He speaks of the Tartars and not of

the Emperor's subjects. Cf. page 149, where a passage is quoted alluding to the same fact.

而其弊自止矣。

If we consider that the amount of the money fabricated by our dynasty is 1.000.000 string yearly, and that perpetual complaints are still made that the money is scarce, it must be attributed to this that it is imported and spread among the Barbarians. Let us closely examine (the condition) of the three provinces of *Ho-pek*, *Ho-tung* and *Sen-si*. In each of them the ground produces iron. Now we see that at present in *Sen-si* the number of tens of thousands of iron coins worth 2 *cash* which are cast there, is very large, and that it circulates together with the copper money; but that among the people the iron money is thought light and base, so that 15 pieces of iron money are made equal in value to hardly 10 pieces of copper money, while by the government the iron and copper money is employed on a par. In consequence of this the law of the issue of receipts for salt (on the part of the government) shall surely become a dead letter in the long run<sup>1)</sup>. Though there is small iron money extant in the province of *Ho-tung*, yet the number of pieces is very little. Only in the province of *Ho-pek* no money has been cast as yet, now your servant and others (likewise) have been told that somebody whose advice was asked, had said that, iron money might be cast for those three provinces together, and that the districts where this

1) Because the government in the payment of these bills gives copper and iron money at the same ratio, and the people, when paid in iron, will consequently lose

50%. For this reason they will furthermore refuse to accept the salt receipts which may expose them to such a considerable loss.

though not entirely solved, we may easily conclude to have come at the end of the question. The Chinese saying:

命裡只有八合米  
走盡天下不滿升。

"If a man's fate is to have only eight-tenths of a pint of rice, though he traverse the empire all over, he cannot get a full pint," is perfectly applicable to the Chinese government of that time.

In speaking of the disadvantages of the double standard we have said that the influence of the free market, the greatest drawback of the bimetallic system in the present time, was of very little importance for the China of those days. Independently, however, of the existence of the double or single standard the export of money to the Barbarians was, especially in the latter part of the 11<sup>th</sup> century, enormous.

Their perpetual wars and constant intercourse with the Chinese had taught the Tartar tribes to appreciate the use of money, and as they did not make it for themselves, it was natural that they tried to get it from their neighbors who, in spite of the severest prohibitions instituted by the government, always found means to supply them with the quantities of money they required.

We have already seen it from the passage quoted on page 145, [Matw. IX 14a] which, though not very clear, is wholly explained by the following little fragment which is appended to the report on the paper money of the Tartars [Matw. IX 28a].

中錢北奏濱<sup>1)</sup>元國幣界事使祐錢惟別亦遼間云用無言回顓

In the period *Yuen-yeu* (1086—94) when *Ying-ping*<sup>1)</sup> the envoy returned from the Liao-Tartars, he also states in the report of his doings, that at the Northern frontiers there is especially a want of money and that only the old money of the Middle Kingdom is in use there.

1) Literary name of 蘇轍 *Ssu-* | *tse* who lived 1039—1112. Cf. MAYERS I. 624 and above, page 145.

If we consider how in our times, now the gold standard has been more generally adopted in Europe, the Asiatic countries have become the market for the superfluous silver, it will be easy to understand, how, in the times mentioned, the comparatively small amount of money flowed to the western countries where it was greedily sought after.

If the process by which the money was made had been better, and if the Chinese had known the art of striking money, the same circumstances which now proved to be fatal to the country might have been attended with the greatest benefits; but from the different minute informations given by Ma-twan-lin, it appears that the making of money was a troublesome and laborious work, every little piece being cast separately. The way in which the copper mines were worked was moreover far from perfect.

According to a statement given by Ma-twan-lin in particulars [IX 12b—14a] it appears that about the middle of the 11<sup>th</sup> century more than 5½ million string of money were fabricated a year in the whole empire; of these about 900.000 were iron money. By this proportion between copper and iron it ought not to be forgotten that moreover the quantity of money, and especially of the cheaper iron, which was thrown into the market by the false coiners, must have been enormous.

A second statement of about the year 110 shows that since that time, however, less money, only 4 million string, was cast in the empire [Mat. IX 20b—21a.]

Owing to the war the foundaries in the Western provinces had produced hardly any money, and accordingly they had been shut up for a while, for, though they had no work to do, the great number of officials retained their offices, and for this reason the

cost of fabrication was so heavy that the government paid 2400 cash for the fabrication of one string of 1000 cash. Another reason why there was less money circulating, though not stated, must have been the gradually increasing issue of paper money.

About the close of the 11<sup>th</sup> century two measures were taken which in our eyes deserve high praise, but which, applied to Chinese society, proved to work in an opposite direction. These measures introduced by the learned but too theoretical prime-minister Wang-ngan-si 王安石 were: 1°. The system known as 青苗, the state-advances for the cultivation of fields, given to such people as were too poor to defray the necessary outlays. 2°. The suspension of all restrictions on the export of money abroad.

Ma-twan-lin only notices these subjects in passing, and in such terms that it is evident he attacks not the system but the man. And indeed a man who abolished the time-honored institutions of his country, introduced all sorts of novelties, and taught his countrymen new-fangled ideas, such a man was a monster in the eyes of the true-born Chinese<sup>1)</sup>.

To show the real worth and honorable intentions of the minister we shall, besides quoting those allusions to this subject scattered about our chronicle, communicate to our readers what we have found elsewhere regarding this system of state-advances.

DE MAILLA tome VIII p. 266, says that the minister Wang-ngan-si proposed this plan to the Emperor in order to meet the wants of the people, and also to take care in the interest of the state that no fields should remain uncultivated. In the capital a central office should be established, from which agents should

1) The same Wang-ngan-si tried to introduce a system of universal militia enrol- | ment. MAYERS I. 807.

be sent into the several provinces, who in spring-time advanced to people who were too poor, the seed which, taken from the state-granaries, was to be returned in autumn with a certain gain proportionate to the harvest. This means would produce that all the field suitable for cultivation yielding their fruits, there would be abundance of food among the people while the wealth of the state would be increased by it. Of this plan so excellent of itself, **MAYERS** says: I. 807. "Whatever benefit might have accrued to the agricultural classes from the system of government loans, was wholly neutralised through the rapacity and villany of the underlings and satellites into whose hands the disbursements of the advances and the collection of interest lapsed, distress and impoverishment taking the place of the expected advantages to the people, whilst on the part of the state vast sums were irre-  
vocably lost."

In consequence of this after having been displaced by another, that unlucky minister saw after a short time his whole system condemned and rejected.

**MAYERS** says of him: During his life he shone, on the confession of his most vigorous opponents, as a celebrated scholar, and as a man who by the brilliancy of his genius blinded his faults.

The first of the fragments alluding to the system of *Wang-njan-ki* is part of a speech delivered by *T's'ang-fang-ping*<sup>1)</sup>, in which he says that the quantity of money in the empire is insufficient for the wants of the people and points out the several causes which have occasioned this want. [Matw. IX 10b].

1) The same official that was a member of the committee which advised the government as to the measures to be taken in order to avoid the dangers resulting from the use of a double standard. Cf. page 140.

今乃歲納役錢。七萬五千三百有零貫文。散青苗錢八萬三千六百餘貫。累計息錢一萬六千六百有零貫。此乃歲輸實錢三千餘貫。又弛邊關之外。禁開賣銅之法。外則泄於四夷。內則縱行銷毀。鼓鑄有限。壞散無節。錢不可得。

Now they received, (it is true) on behalf of the government-service'), (a sum of) more than 75.300 string in money, and the 83.600 string lent as advances for the cultivation of land, yielded a sum of more than 16.600, compound interest, but of all this no more than 3000 string was received yearly. The restrictions on the export of copper abroad, and the laws on the selling of copper were also suspended, so that it is spread abroad to the Barbarians, while at home they connive at its being carried to the foundaries and being broken. While the coining of money has its limits the destruction and diffusion is unlimited, and the result is that the money is no more to be had.

The second fragment reads as follows:

自王安石爲政。始罷銅禁。姦民日銷錢爲器。邊關海舶不復譏。國錢之出。國用日耗。又皆徵錢。民間錢荒。故青苗助法。方平極言之。

Since Wang-*ngan-ši* had the reins of government in his hands, he began by suspending the restrictions on the melting of copper. Now villains melted the money daily to make tools of it. And when the export of copper along the stations of the custom-house officers on the frontiers, and in vessels across the sea was not controlled<sup>2)</sup> any more, the money wanted for the use of the country diminished greatly. Likewise the method of supporting by state advances for the cultivation of land, demanded much money. Of all this the result was that among the people there was a great want of money. Hence it is explained what (*T's'ang-fang-ping* said at the end of his speech.

The third allusion we find in the beginning of Ma-twan-lin's

1) 役 the government service; 役錢 money on behalf of the government service.

have, however, taken it here in the meaning of 察讞 to examine, to inspect.

VIII<sup>th</sup> Volume, in his own criticism on the transactions of the *Tsou-dynasty*, and the way in which they had regulated the interests of the state advances, in those times supplied by the 泉府, (the collector of taxes) to the people for sacrifices and mourning.

於息爲解誤爲自王介甫注國服  
義爲生此語天下之說。而後青國服  
皆無休息之者。或以儒青國服  
當息。或以息之苗服  
然以息之苗服

Even Wang-kie-fu (nom de plume of Wang-nan-ši), estimated the total sum of interest in proportion to the wants of the country, when he committed the error to introduce the method of state-advances into China, and of those of the commentaries of subsequent scholars who treat of it, some say that he made accrue interest on interest, others that he

did not take compound interest (lit. that he let rest interest on interest). However as regards propriety all this is not as it should be.

Finally we have given a single fragment discussing the second measure of the unhappy minister: the suspension of all restrictions on the export of money. [Matw. IX 14a].

共貨而每錢回。海關錢寧言者  
公用寶已。貫出沿船重禁。七年謂  
之與是收外邊飽車而以此削自  
也。四中稅界。州載而出。邊除熙  
夷國錢但軍而出。邊除熙

Somebody who made a communication on this head<sup>2)</sup> said that since the 7th year of the period *Hi-ning* (1075), when the restrictions on the export of money were entirely suspended, in consequence of these measures, heavily loaded wagons passed the frontiers through the passes, and sea-vessels heavily freighted sailed out. In the districts and encampments situated along the frontiers the money went abroad. Only a certain tax was levied there on every string and that was all. This resulted from the fact that the medium of exchange of the Middle Kingdom was generally in use among the Barbarians.

When the time will have come that Western civilisation has penetrated into China and the sons of "the Empire under Heaven"

1) 說 = 稅.

2) lit. The speaker said.

read *Wang-ngan-ši's* history in the light of the science of Political Economy, the impartial critic shall appreciate the good principles of the rejected system, and say after a Chinese sage:

“The prescription was good but the medicine bad.”

Vast supplies of money were continually wanted. The war devoured treasures and the paper money which for a time had supplied the insatiable demands, began to lose its credit.

In addition to this there were the export abroad of coined bullion, and the influence of the false coiners; for China too was to obey the economical law that as soon as the quality of the money becomes bad, the quantity must be increased to restore the balance and to meet the demand for the requisite quantity of currency. Reading the history of the second part of the 12<sup>th</sup> century we might fancy to have got back to the days of the *T'ang*-dynasty: — decrees were issued prohibiting the possession of more than a certain amount of copper; monasteries and temples were despoiled of their treasures, and that good examples might not be wanting, the emperor himself ordered the officers of his court to take 1500 different objects made of copper from the imperial treasury, and to sacrifice them on the altar of the country. These measures enriched the country with 2.000.000 pounds of copper.

故重能民間按  
爲而流間所此  
此不通錢行卽  
末能縣少皆唐  
策廣官而是以和  
耳鑄費不以和元

“If we consider these facts, [says Matw. IX 21a], “we see here the same (excess) as under the reign of the *T'ang*-dynasty in the time of the period *Yuen-ho* (806—821). All this was the result of this that among the people money was scarce, and consequently could not circulate, and that the expenses of the government were heavy, while it had not the power to increase the fabrication of money. For that reason they passed to such extreme measures.

The further informations are devoid of interest. The government continued to cast pieces of 2 cash and to take care as much as possible that the money remained in the country, but no law could stop the outflow, and the cunning merchants knew how to keep up their prosperous, though illegal, trade.

Ma-twan-lin's last fragment<sup>1)</sup> dates from the year 1210, the third year of the period *Kia-ting* under the reign of the emperor *Ning-tsung*. At that time money was cast, which had a metallic worth of 3 and a nominal value of 5 cash.

Then there was a councilor who feared that this profit enjoyed by the government would cause a great increase in the number of false coiners, and that consequently the value of promissory notes would fall. Another councilor, however, was of opinion that it was highly desirable to make the money light; for though this might not act as a check on false coining, the promissory notes must necessarily get a higher value, because as soon as the money was bad, these notes would be in great demand, and consequently rise in value. Our clever economist, however, forgot that those notes, exchangeable for that debased money, must needs get lower in value at the same time.

We conclude this chapter with a critical view of the learned *Tung-lai* of the family-name of *Liu*, as read at the end of the IX<sup>th</sup> volume of Ma-twan-lin<sup>2)</sup>.

In the part not quoted, he tells us how, in the beginning of the *Sung*-dynasty, they had adhered to the right principle of

1) We omit the part referring to the 小平錢 the little peace-money, which afterwards was instituted, and circulated for a long time. It seems to have

been good, but nothing interesting is communicated beyond its institution.

2) The subsequent part of the essay of which the beginning is quoted page 13 seq.

casting money of a quality as good as that of the *Kai-yuen* money in the times of the *T'ang*-dynasty. But when the continuous wars drained the resources of the country, so that the scarcity of money became very great, those good principles were lost sight of. He then proceeds as follows.

後錢雖多。然甚薄惡。不可用。當時務要得多。不思大體。國家之所以設錢。以權輕重本末。未嘗當歸公上。鑄錢所入多爲利。殊不知。論財計不精者。但取利。論工。雖多利之小者。權歸公上。鑄錢無利。則鑄錢之大者。南齊孔顥論。若不惜銅。則鑄錢無利。私鑄不敢起。則歛散。若不得利。則私鑄不敢起。私鑄不敢起。

Afterwards the money though abundant in quantity, got very thin and bad and (consequently) unfit for use. At that time (the government) only strived after obtaining much money, but the fundamental rules (lit. the highest rules of propriety) were not thought of. The reason why the state has instituted money was to measure the beginning and the end of light and heavy (of weight), and it did not occur that they took profit out of it as long as they (really) considered it as a precious object. But those who reckoned the coins so that they were not pure, only thought that whenever that which was gained in coining was much, profit was made. But surely, they did not understand the importance thereof that the money came back again in the possession of its full value (lit. just and excellent). What is gained in the fabrication of money, however much it may be, is only a slight profit in comparison to the great profit that it comes back (to the government) still in the possession of its full value.

The theory of *Kung-l* of *Nan-tsi* regarding the casting of money is, that it is not allowed to be sparing of the copper or to grudge the workmanship, for as soon as the copper is not spared, the casting of money is without profit, and if no profit is to be made, the false coiners do not care to arise, this again is the reason that the money comes back in its full value as it was cast, when it is withdrawn as well as when it is issued again, and that it does not answer to an inferior

歸公上鼓鑄。權不下分。此其利之大者。徒徇小利。錢便薄。惡。如此姦民務之。皆可。是以小利失大利。利孔四散。乃爲薄錢。不出於公上。利孔四散。乃爲薄錢。是以小利失大利。南齊自緣錢薄惡。後論者紛紛。或以爲國賦條目不一。皆是上之不端錢。或者顚乃爲薄錢。是立法以禁惡錢。或是紛紛。或以爲本而齊其末。若使姦民無利。則國家之大利。如周如秦。如漢五銖總乃人揣錢。或者顚乃爲薄錢。不惜銅愛工。使姦民無利。則國家之大利。如周如秦。如漢五銖總乃人揣錢。或者顚乃爲薄錢。

part (of the whole). Now this is the greater profit (of the two). If, on the contrary only the smaller profit is aimed at, the money becomes at once light and bad, and if this is so, rascals try to imitate it, and everybody is able to do this, because the principle is neglected to make it pure and of its full value; the supposed profit spreads (now) in every direction, and so by (the pursuit of) a smaller profit the greater is lost.

This is what *Kung-I* of *Nan-tsi* has said and it is a theory which admits of no change<sup>2)</sup>. Various persons have since because the money was bad, constructed theories in which there is neither rhyme nor reason<sup>3)</sup>. Some thought that the remedy lay in this that a law should be enacted to stop the bad money; others were of opinion that, as money was about the same as the produce of the soil, the objects of which it consisted might not be of the same sort at all time. But all these theorists have not tried to comprehend what the origin and reason (of the institution of the money) has been, nor have they been able to understand the object of it, and that this would have been the greater profit of the government, when they who were at the head of the affairs had not been sparing of the copper and had not grudged the workmanship, and by this had caused that false coiners could make no profit.

If we consider in particulars the regulations according to which (in different times) money is made, perhaps those regulating the 5 *tshu* pieces

1) The profit is hollow and is spread in the four (directions).

to "the Chinese reader's Manual".

2) *Kung-I* of *Nan-tsi* is obviously the same as *Kung-Kai* whose speech is treated of on page 79. The Chinese have frequently different names. See MAYERS' Introduction

3) 紛 | confused, disorderly.

4) 條目 | properly a list of the articles.

如唐開元。其規或可以爲式。此是錢之正。若一時之所鑄。財如劉備鑄大錢以足軍市之權也。第五琦鑄乾元錢。此是錢之權也。如漢武帝以鹿皮爲幣。王莽以龜貝爲幣。此是錢之蠹也。或見財貨之多。欲得鼓鑄。皆一時矯枉之論。不可通行者也。今則所論利害甚悉。財利之用在於貿易。推本論之。錢之爲物饑不可食。寒不可衣。至於百工之事。皆資以可。

of the *T'seu*, *T'sin*, and *Han*-dynasty, and those regulating the *Kai-yuen* pieces of the *T'ang*-dynasty, may serve as examples, as these sorts have had the real (value) of money. If we mark the money made for a certain time, as when *Liu-pei* cast the great currency in order to meet the want of a medium of exchange for the army and in the market<sup>1)</sup>, or when *Ti-wu-ki* caused the *Kien-yuen* coins to be cast<sup>2)</sup>, these sorts were equivalents for money (i. e. tokens). When *Wu-ti* of the *Han*-dynasty made a medium of exchange of white deerskins; and *Wang-mang* of tortoise shell and cowries, these were the wood-worms of the money<sup>3)</sup>.

At a time when they saw that there was a great abundance of money, some wished to have the money abolished, others, when seeing the great scarcity of the medium of exchange continually wished more money to be cast. All these theories were erroneous and wrong, and only prevailed for a certain time, and may not be applied as a general rule.

At present (also) the theories of profit and loss are very common, and the profit and utility of the money consist in the exchange effected by it. If we penetrate to the foundation in arguing (on the value and meaning of money, we arrive at the conclusion) that money is an object that in a time of famine cannot feed (us), in a time of cold cannot clothe us, but coming to the service of all occupations, all sorts of precious things may be procured by it. Hence it may not be bad! If this is so, although the vitality of the earth is spent to the

1) *Liu-pei* 220 A. D. the first emperor of the kingdom of *So* during the division of the Empire. Cf. p. 62.

2) *Ti-wu-ki*, a prime-minister under the *T'ang*-dynasty, 753 A. D. Cf. p. 115.

3) By this expression he probably means that these sorts of money would increase as rapidly as woodworms propagate. Cf. p. 127 where the same expression occurs.

然古義論利相權國家之此重。雖咸餘。旣者爲生。若山澤穀帛是地力不可缺也。可識要亦孔顛。尋彼錢錢藏。有

last, there is still a surplus of grain and silk, and what is hoarded in mountains and in moors, all this gets its importance (lit. profit.)

Though money is scarce, provided it have its full value, the fact that the real and nominal value are on a par, is the profit of the government. This is also the theory advanced by *Kung-I*. It is a necessity and a duty always to strive after the old and just, and if one knows to manage the money in such a way, that it is an equivalent for a real value, then matters will go right<sup>1)</sup>.

I) 識經權 The terseness of this phrase renders it almost unintelligible to one who is no Chinese. 権 signifies here the exact counterbalancing, the precise ratio between the nominal and real value of money.

## CHAPTER VI.

### PAPER MONEY OF THE SUNG-DYNASTY.

---

A history of the development of the Chinese people compared with that of other nations, ancient and modern, which have existed and still exist in all parts of the world, would be an interesting subject indeed.

A great many points of comparison and resemblance would be found in the course of the development of the human mind, which in the history of those different nations have ultimately led to the same results.

And as the Chinese people existed and had already a history before that of other peoples commenced, and the Chinese people has continued to exist, and its history uninterruptedly goes on from age to age, when that of other peoples ceases and disappears, these points of comparison, only slightly modified, present themselves

to us over and over again. But for the very reason that the Chinese people at one time had the start of all other peoples in civilization, we find such ideas and institutions as are only the fruits of a rather high stage of intellectual development, with the Chinese generally earlier than elsewhere. So also with the history of the rise, the progress, and decline of paper money; for the Chinese had already suffered all the misery arising from an overissued and depreciated paper currency when it was hailed in Europe as the invention of the philosopher's stone for which had been sought so long. At what time we are to fix the first appearance of paper money, or rather of a representative currency is difficult to say. The white deer-skin parcels of *Han-wu-ti* were a similar kind of money, and in treating of them (See page 39) we have seen that the Chinese chronicle already refers to the circulation of a similar currency in olden times, about which history is silent, at least as far as Ma-twan-lin records it. A little work on Chinese money begins its account of the 楷鈔 lit. bills made of the bark of the 爲以伯軒 mulberry-tree, with this information: "Pēi-ching 布陵 輳 *ling*, minister of *Hien-yüen*, began to make paper money of silk shreds." *Hien-yüen* is one of the names of the emperor *Hoang-ti*, the third emperor of China mentioned in history, who is said to have reigned about 2697 B. C. Such vague reports are of course of no value whatever.

The first trustworthy appearance of paper money we have in the reign of the *T'ang*-dynasty (See page 120) but, even then, we do not perceive the least method or systematic development in the institution.

Not until the reign of the *Sung*-dynasty we see this system

fully developed, but what originally was a blessing bestowed on China became a "bane of bliss and source of woe" by the stupidity and cupidity of the government.

Before treating of this institution, it will perhaps be well to mention the different denominations with which the Chinese have tried to express their notions of the now well-known and current technical terms: credit, assignment, paper, bond, bill of exchange, reserve-funds, time of redemption, etc.

1°. Flying money 飛錢 *fei-tsien* (See page 120) was the simple and natural denomination assigned to it, when the Chinese began to appreciate the great advantage that it was not heavy like the strings of copper and iron *cash*. It is remarkable that about the same idea suggested itself to ADAM SMITH when he wished to give his readers a notion of paper money, where he speaks of "commerce and industry, as it were, suspended upon the Daedalian wings of paper money<sup>1</sup>)." But the Chinese idea exactly tallies with that expressed in GOETHE's Faust where Mephistopheles plays the trick upon the emperor to give him a paper currency, and the Marshal apprising the emperor of the effects of the new institution says:

1) ADAM SMITH compares the metallic and the paper money to two ways, one of which is a highway on the surface of the earth, the other a way through the air. The few lines which contain his metaphor follow here, to show that SMITH even in his allegorical comparison was much more practical as to the conception of the difference between coin and paper money than our Chinese authors. See Wealth of Nations B. II. Chap. II. Edition of McCULLOCH, page 141. "The gold and silver money which circulates in any country may very properly be compared to a highway, which, while it circulates and carries to market all the grass and corn of the country, produces

"itself not a single pile of either. The judicious operations of banking, by providing, "if I may be allowed so violent a metaphor, a sort of waggon-way through the air, enable the country to convert, as it were, a great part of its highways into good pastures and cornfields, and thereby to increase very considerably the annual produce of its lands and labour. The commerce and industry of the country, however, it must be acknowledged, though they may be somewhat augmented, cannot be altogether so secure, when they are thus, as it were, suspended upon de Daedalian wings of paper money, as when they travel about upon the solid ground of gold and silver."

Mit Blitzeswink zerstreute sich's im Lauf.

2°. Convenient money 便錢 *pien-tsien*, was another denomination which we meet with in the very first fragments referring to paper money.

But more remarkable than these are two other denominations which arose not until the institution had reached a higher stage of development, and which were intended to express the thought of the Chinese at the sight and use of such a simple shred of paper circulating as money. They are 1° 錢引 *tsien-yin*, 2° 稱提 *tshing-t'i*.

1° 錢引 *tsien-yin* is the term the Chinese use to express their notion of *credit*; 引 *yin* properly signifies the bending of a bow, the stretching of the string. If we hold to this primary signification, it is clear how the Chinese have come by the secondary meaning, as it is in fact a stretching of money, money which becomes money only after a certain lapse of time, when the string is let loose; thus credit. The simile could not be chosen better. Very exactly it describes the suspension which is created by credit, and which does not terminate before payment takes place, or, to make use of the same figure, when the string is let loose. The (*ob-*)*ligare* and the *solvare* of the Roman civilians was a similar figure. BIOT *in loco*<sup>1)</sup> has taken this word in another meaning when he speaks of 錢引 signifying *Introduction de monnaie métallique*. It is true that, as all dictionaries tell us, the character 引 means also introduction, but this too is already a secondary signification of the character, as the bending of the bow is the introductory

1) *Journal Asiatique*. Sept. 1837, p. 229.

act to shooting. Besides, what would be the meaning of *Introduction de monnaie métallique* in the institution of paper money which is the very opposite of metallic money? Perhaps the history of the Austrian Metallicken ran in the mind of the learned author when he wrote that explanation. Henceforth, in the translation of our Chinese text, I shall render the character by the term bill of credit, as it commonly occurs in the meaning of the bill which is the bearer of the debt; as for instance in 川引 *iš'uen-yin*, meaning (bill of) credit of the province of *Sse-tš'uen*.

2o. Still more peculiar is the second term 稱提 *tš'ing-t'i* by which the meaning of promissory note is designated, and by which the nature of paper money is so perfectly expressed. The character 稱 means corresponding to, counterbalancing, weighing against; 提 signifies to carry or hold in the hand, and also to bring forward. The two characters combined mean therefore to counterbalance a real possession. The first time Ma-twan-lin uses the expression (IX 25a) it serves to explain the nature of the receipts issued by the state for government productions "These receipts," says the author, "could unobservedly help 稱陰可 (to supply the deficit in the state finances) as they 提助以 counterbalanced the actual possession" (of those articles yearly stored up by the state).

But the same combined expression occurs further as a noun which is either subject or object of a sentence; for instance in Ma-twan-lin, IX 29a, where we read 以稱提失職 "in consequence of (the bills) weighing against a real possession they lost their office," and a little earlier 而重刑用假稱提, "and the making use of false (bills) weighing against a real possession was severely punished. The real meaning of that com-

pound expression is the assignats of government money or government productions, and we may safely translate it by assignments, checks, or promissory notes. Eight or nine passages have I found in Ma-twan-lin, where this word is employed, but to avoid needless repetitions they will further be treated of when they occur in our chronicle.

For the bit of paper itself (a meaning not conveyed by the characters above treated of) there exist several terms which are employed alternately. Of most frequent occurrence are: 1°. 鈔 *tšao*, a combination of the radical 金 *kin* metal and the phonetic element 少 *šao*, scarce, which according to the explanation given by Klaproth in "Le Journal Asiatique," (1822) would mean *manque du métal* (*monnaye*). 2°. 椴 *tšu* which is the name of the *Broussonetia-papyrifera*<sup>1)</sup>, and refers to the material of which the bill was manufactured, a fibrous substance forming the inner coat of the bark of the *Broussonetia*. 3°. 牍 *pai*. 4°. 票 *p'iao*. 5°. 書 *šuu*. 6°. 券 *kiuen*. 7°. 簡 *kien*. 8°. 帖 *t'ie*, etc., all of which have the signification of tablet, billet, document, slip of paper, card, etc. They occur alone or in combination of other terms which make the meaning still clearer, and most of them will often be met with in the sequel of this chapter.

Lastly, there are three more words used interchangeably for different varieties of paper money, and in this case we are fortunate enough to have in English equivalent terms of the same characteristic meaning. They are the words 交子<sup>2)</sup> *Kiao-tsze*, bills of exchange; 會子 *Hoei-tsze*, agreements, bonds; and 關子 *Kwan-tsze*, frontier-bills, which last were a sort

1) See HOFFMANN et SCHULTE, "Noms Kura-ri p. 77.

indigènes d'un choix de plantes du Japon et de la Chine," n°. 94. THUNBERG, "Flora

2) 子 is often added to names of things, "Japonica," page 72—77. SAVATIER, Livres as a formative of a noun.

of promissory notes used in the armies encamped on the western frontiers of the Empire, and with which the caterers for the army were paid. The government, as it said, made use of these receipts, in order to prevent the enemy from taking possession of the metallic money in case the camp might be plundered. The true reason why those frontier-bills were frequently employed was, as history informs us, because this was the easiest way for the government to pay its debts contracted in behalf of the army.

In Plutarch's Life of Lycurgus we read: "He (Lycurgus) first abolished all gold and silver currency, and ordered to make use of a single iron money, and to this he gave a great weight and dimension, together with a slight intrinsic value, so that the equivalent of ten minas required a large depository in a dwelling, and a yoke of oxen to transport it<sup>1)</sup>."

It is very doubtful whether this part of Lycurgus' reform was really beneficial to the Spartans, and whether they would not have soon made an end of it, if their attention had not been entirely absorbed by warfare and public meals. — In the western part of China where nature and circumstances had blessed the inhabitants with no less inconvenient a currency than the Spartans received from their legislator, the people were cunning enough to substitute the *πολλοῦ σταθμοῦ καὶ δύκου νόμισμα* by a more portable medium of exchange. They established a bank where the heavy iron money was deposited and exchanged for the light paper which was generally current in those parts. But let us

1) Plutarchus Vit. Lyc. Capus IX.  
Πρῶτον μὲν γὰρ ακινάσας πᾶν νόμισμα

於。益。其。務。於。益。其。務。於。益。其。務。於。益。其。務。於。益。其。務。

In the beginning the people of the province of Šo (the ancient name of the prov. of Sse-ts'uen) had made bills without the knowledge of the government, as their iron money was so heavy. They had called them *Kiao-tsze*, (bills of exchange). Because they were convenient in trade, sixteen wealthy families had united to manage the issue of the *Kiao-tsze*. But when the wealth of those families gradually diminished, and they were no longer able to redeem what they had bound themselves to (lit. what they had loaded upon their backs), many quarrels and lawsuits ensued. *Kwan-tšin* who had been a magistrate in the province of Šo, urgently requested to prohibit the people the use of the *Kiao-tsze*, and *Pi-tien* who then held there the post of officer for the transports, advised to abolish the *Kiao-tsze*. As this, however, would paralyze trade, it was suggested to establish an office for the issue of paper money on the part of the government, and to prohibit the people to make (bills) for themselves. According to this proposal a decree was enacted, to establish a bank for the issue of *Kiao-tsze* in the province of Yü-k-ts'eu (in Sse-ts'uen).

The two following passages which in Ma-twan-liu's "Examination" precede the above quoted fragment, give some information as to the manner in which in the beginning the paper money was emitted on the part of the government, the quantity which was brought in circulation during the first 50 years, and the way in which it became legal tender.

置便錢務。令高人入錢。

During the reign of the emperor *Tai-tsü* (960—976), the old institution of the *T'ang*-dynasty, the flying money, was reverted to again. The people were allowed to deposit their money in the capital. As they (the bills) were in all the provinces convenient in exchange, it was afterwards decided also in the outlying parts, and in the provinces indifferent what were the boundaries, to allow and even to point out that they should be issued. Since this last (increase) the usual quantity (of ready money) in the capital augmented more and more, as the money from all the provinces was carried thither. Those (bills) which circulated (in the market) must be accepted instead of money. Sometimes by them other articles were transferred in daily use<sup>2)</sup>.

Before this time (probably under the *T'ang*-dynasty) when the merchants were allowed to deposit their money in the left state treasury, in order to receive afterwards the money current in all the provinces, (i. e. the paper money) they were however obliged to have carried the money to the exchequer before the three functionaries who were at the head of the establishment, issued the bills, and on this amount the functionaries charged a premium of 20 cash a string<sup>3</sup>). In the third year of the period *Kai-pao* (970) a government office for the issue of convenient money was established. The merchants who deposited money, had to apply to the office for the issue of bills, and the same day they had to take care that the money was conveyed to the left government treasury,

1) 故 = 古.

2) The meaning of this seems to be that the receipt which commonly ran: "for so much copper money," if required, might also run for so much iron, silk, salt or other articles for which they might be exchanged at the government treasury, because elsewhere the same articles were deposited.

3) 私刻 to cut out for themselves (out of the strings), not for the state, which would be 公. Literally the phrase reads: "of which the functionaries reckoned on a string of 1000, a cutting out or deduction of 20 cash" — thus a premium of 2 per cent.

in order to receive the bills in return for it. Furthermore an order was sent into all the provinces that generally as soon as the travelling-bills<sup>4)</sup> of the merchants arrived, they should immediately be accepted and transferred, and that no stop might be put to them. He who was disobedient to this order should be punished with a fine. Since that time they were neither stopped nor refused. At the end of the period *Ts'i-tao* (995—998) the quantity of "money convenient to the merchant" amounted to 1.700.000 string, and at the close of the period *Tien-hi* (1017—1022) in consequence of a continual extension, this was increased by an amount of 1.130.000 string.

All these, however, were vague reports, and of a regular system there was no question as yet. Ma-twan-lin seems even to have quite lost sight of the paper money, as after these three fragments he devotes many pages exclusively to the metallic money. Suddenly [Matw. IX 18b] he begins a new chapter, entitled **交子**. Bills of exchange, in which all informations on the issue of those bills from 1021 to the beginning of the next century are successively communicated, though without the least comment. We have given the whole of it with a verbal rendering, but to the better understanding of some allusions and expressions a few introductory words will be necessary.

Before the bills of exchange were brought in circulation, the Chinese seem to have had another sort of paper currency, in some

4) **齎券至** I have translated by the travelling bills arrived. **齎** means to prepare things for a journey, but also, to offer, to send. Hence it might also be translated by when the bills presented by the merchants arrived.

respects resembling our dock-warrants and bills of lading, bills conferring authority to receive a certain amount of government products, as salt, alum, tea, iron, etc. These were transferred from hand to hand like money, and had great credit with the people, as the lands and manufactories belonging to the state yielded a large quantity of productions; especially in the encampments where that last sort of bills was made use of to pay the purveyors who in their turn transferred them to their creditors. And so they circulated till at last they fell into the hands of a merchant who was in want of the articles the bills authorized him to receive, and consequently realized them at the government granaries<sup>1)</sup>. When, however, besides these produce-receipts, there came other bills which could be exchanged for real money, and which did represent not only a certain sum and often a fractional sum as the produce receipts, but were to be had of any amount and for even sunis, they were generally preferred when payments were made, and it was not long before merchants and traders refused to accept the produce-receipts and compelled the government to shut in some encampments the offices for the issue of these notes. We read however that, in the time when the paper money was depreciated, those offices were opened again.

In the second place I wish to notice the way in which the payment of bills was guaranteed by the government, and something about the time at which they were redeemed. The principle, that a bill should be convertible at any time, the Chinese have never known, and from the beginning we see that only at prescribed intervals the bills could be exchanged for specie. A term of three years was

1) An allusion to this we find already in the second of our fragments referring to paper money (See page 168). From some vague allusions it also appears that the

government discounted those bills and paid them in money, at places where no commodities were stored up. Cf. for instance p. 146 note 1.

generally adopted. So the first series of bills of exchange was emitted to circulate for a period of 65 years; every three years there would be a fixed time at which the holders could demand specie payment for their bills. The fund which in the first time of the issue of bills seems really to have been deposited at a ratio of  $\frac{3}{7}$  of the amount of the bills then issued, was very characteristically called 本錢 *pun-tsien* lit. basis or fundamental-money, capital.

Surprising it is that Ma-twan-lin does not give the least information on these triennial times of redemption, but supposes his readers to be acquainted with the term 界 employed by the Chinese for time of payment due, which frequently occurs in the fragments he borrows from the annals and chronicles. This forms an additional difficulty in Ma-twan-lin's text, and though by comparing the several passages all doubt is soon solved, yet I have thought it desirable to give the explanation as it is found in the Chinese encyclopedia 原鐘致格. Vol. 35 pag. 21b, where we read the following phrase, after the origin of the paper money has been explained.

二丙辛換三法。於  
十辰亥之年一 是  
三十六至始爲交設  
界。十五熙祥一一質  
寧符界緝劑。  
年 之 而 以 之

"Thereupon they instituted the law of checks, every bill of exchange was of one string, every three years there was a time of falling due in order to pay them back (convert, exchange them). Beginning from the year 1011 to the year 1076, thus during 65 years there were 23 terms (or intervals) <sup>1)</sup> 2).

It appears, however, that the people were so much in want

1) 質劑 check, signifies the two halves of a written agreement or bond of which each contracting party retains one. K'ang-hi says 質劑券也.

2, A great difficulty in the text is occasioned by this that the word 界 constantly occurs in the same fragments both in its primary and secondary meaning.

of this "convenient money" that at the prescribed intervals hardly any bills were presented. The consequence was that the government became improvident, and the increasing wants of the army induced it at last to use the reserve-fund deposited in the bank. This is evident when we compare Ma-twan-lin's fragments, and it also explains what follows the sentence just quoted from the Chinese Encyclopedia. "Though they were uncommonly convenient, yet it happened (in 1076) that they could not be exchanged." 雖至巧有不能易。

The above information will be sufficient to understand the fragments bearing upon the issue of bills of exchange which now follow<sup>1)</sup>.

#### THE KIAO-TSZE OR BILLS OF EXCHANGE.

置鐵公二法。如立熙四萬以天聖交  
潞錢私年。官僞寧十六千二百予。  
州<sup>3)</sup>勞共以印造元緝三十九來。  
交費苦河文罪年爲三十界。  
子詔運東書賞始額百五界<sup>2)</sup>

Since the period *T'ien-sing* (1023—1032) the *Kiao-tsze* were limited to a fixed amount of 1.256.340 string.

When in the first year of the period *Hi-ning* (1068) there appeared for the first time forged (bills), (it was enacted) that this offence should be punished according to the laws of the forgery of state seals.

In the 2nd year (1069) it was ordered that in the district *Lu-tseu*<sup>3)</sup> a bank for the issue of *Kiao-tsze* should be established, because in the province of *Ho-tung* the transfer of iron money to the government as well as to private persons involved so much trouble and cost.

1) Whenever Ma-twan-lin begins a new fragment, the Chinese text will commence with a new line.

2) Here, for instance, 界 is used in

its common signification of to limit.  
3) *Lu-tseu* is the same as *Lu-ngan-fu* prov. of *Sen-si*, *Ho-tung*.

務。明年。漕司以其法行。則鹽不受有害。入中糧草之奏罷之。四年復行於陝西。則罷永興軍鹽鈔務。文彥博言而其不便。未幾竟罷其法。五年交子二十二界將易。而後界給用已多。詔更造二十五界者百二十五萬。以償二十十三界之數。交子之有兩界。自此始。九年以措置熙河財利孫迥。言商人買販牟利於官。且損迥。

Next year (1070) the officer, charged with the transport of grain, asserted that in consequence of this law (by which bills of exchange were instituted), alum and salt were not accepted<sup>1)</sup>, and that by this the state revenues and the estimate of the expenditure (lit. rations and forage) of the army were injured; he advised to abolish them.

In the 4th year (1071) they were again in circulation in the province of *Sen-si*, and in the encampment in the province of *Yung-hing*<sup>2)</sup> the bank for the issue of salt-receipts was suspended. *Wen-yen-po* had said that these receipts were not convenient, and shortly afterwards the decree (by which they were instituted) had been retracted.

In the 5th year (1072) the 22nd term of redemption of the *Kiao-tsze* was come, and as there were a great many in circulation (to be converted) at the last interval<sup>3)</sup>, an order was issued to make other *Kiao-tsze* of 25 terms to an amount of 1.250.000 string in order to honor with these the number of the still circulating bills of 23 terms. Since that time date the *Kiao-tsze* of two different terms of redemption.

In the 9th year (1076) the decree by which in *Sen-si* the bills of exchange had been instituted, was revoked again, because *Sün-kiung* who was at that time appointed in the districts of *Hi-en Ho-tšeu* (to collect) the treasures and profits (i. e. taxes), said that the merchants made profits by their trade at the expense of the government. Besides the value of the bills was already injured.

1) Salt and alum, i. e. salt and alum-receipts; they were not so current as the bills of exchange.

2) In *Sae-tšuen*.

3) The 23rd term was the last of the first series issued, see p. 171

4) 熙州 is the name, under the *Sung*-dynasty, of the district of *Lia-tao-fu* prov. of *Sen-si*; 河州 was a part of *Lia-tao-fu*.

紹聖元年。成都路漕司言商

新交子。一乃當舊者之四。年逾  
更張之。成都漕司奏交子務。故  
年逾其錢。

In the 1st year of the period *Sao-sing* (1094) the officer for the transport of grain in the district of *Tsing-tu* (prov. of *Sse-ts'uen*) reported that the merchants circulated the bills of exchange in the province of *Sen-si*, and that on account of this his district was in want of them. He thus suggested to have new ones coined. Thereupon there came an order to make an increase of 150.000 string for the time of one term. As also in this year the full amount of former days had remained in circulation, the number of the issued bills was 1.406.340 string<sup>1)</sup>.

In the 1st year of the period *Ts'ung-ning* (1102) the bills of exchange circulated again in *Sen-si*.

In the 1st year of the period *Ta-kwan* (1107), the bills of exchange of the province of *Sse-ts'uen* were changed and made into bills of credit. Since the emperor had conquered *Hoang-t'seu* and had enlarged his dominions by the annexation of *Si-ning-fu*<sup>2)</sup>, he had ratified this law in order to meet the expenditure of his army.

Compared with the first limit of the period *T'ien-sing* (1023), the number of circulating bills was certainly twenty times as much, and consequently their value was injured the more.

When they had come to a year of payment of the new bills, one (of these) had the same worth as 4 old ones (one new bill was exchanged for 4 old ones), and this was reason enough to extend it (the number) again. The officer for the transport of grain in *Tsing-tu-fu* reported that he had already changed the name of "Bank for the issue of bills of

1) 1.256.340 Cf. p. 172.  
150.000

1.406.340. Thus a very small number  
had been redeemed.

2) 潼州 and 西寧 are both  
parts of the empire N. W. of the province  
*Sen-si*.

"exchange" into that of "Bank for the issue of bills of credit". Now he wished to adjust (i. e. to increase, to supply to a fixed quantum) the number of the notes which were (already) emitted with bills of 43 terms, and when the old seals were made use of to bring them in circulation, the people would not be brought in doubt and anxiety, and then credit bills might be made anew. The emperor followed that advice.

There came also an imperial order (relating) to the number (to be employed) in *Sen-si* and *Ho-tung*. The limit of the value of a bill of credit was from 5000—7000 *cash*, but in *Tsing-tu-fu* (the value was so reduced that) they had hardly a value of from 200 to 300 *cash*. *Kio-pu*, an officer for the transports, a short-sighted muddy-headed fellow, proposed as a judicious means of arranging this dangerous state (of affairs) to make it a rule in circulation that when among the people business was transacted to an amount of 10,000 *cash* and more, it should be ordered that half this sum should be paid in money and the other half in credit bills. Speaking about it he said, that when the bills of credit were used together with the copper and iron money, it would be difficult to compare the increase or decrease of their value, and that when it was ordered by law that, what in the future would be stipulated for in iron and copper money, should be paid partly in bills, they would have a value corresponding to that of metallic money. The advice given in this report was listened to.

1) 豪右 an excellent, clever (way).  
一規...法 is about the same as the  
immediately following expression 準法

a regulator. — 利害 when not  
used as opposites, they mean sharp and  
injurious, formidable, dangerous.

知威州張特奏錢引元價一貫。今每道<sup>1)</sup>止直一百文。蓋必官司收受無難。自然通流增長價例。乞先自上請給不支見錢並支錢。下請給不支見錢。並取便行使。公私不得抑<sup>2)</sup>任錢。仍嚴禁止害法不行之人勒<sup>2)</sup>任錢。觀中不蓄本錢而增造無大錢。三十六萬緡新舊相因。大凡舊歲造一界。備本錢從之。

T's'ang-t'eu, a magistrate of the district of Wei-t'seu communicated in his report that of the credit bills, which originally had a value of 1 string, at present each bill<sup>1)</sup> had but a value of 100 cash (He thought however) that as soon as it was certain that the officers would have no objection to accept them, the minds of the people would no longer be suspicious, and that they might be transferred again from hand to hand in trade, and that the general circulation would increase, and raise the value to the legal rule (i. e. to the original value of issue). He requested (the government) to set the example (of going in the right path), and from this time forward to invite the high and the low to accept them, by making henceforth no longer payment in ready money, but to pay entirely in bills of credit, or in the payment of ready money to charge a deduction of from 1 to 2 (tenths-parts), with the purpose to make that, being considered profitable, they would be accepted and employed. Nobody, public or private person, would in that way be obliged to experience constraint or restriction<sup>2)</sup>. But it would be necessary strictly to control those persons who should thwart the plan and refuse to circulate the bills. This advice was followed.

Generally, when formerly the paper money of the first issue was made, the deposited capital of 360.000 string<sup>3)</sup> had been furnished. But in consequence of the new bills and the old ones circulating together, in the period Ta-kwan (1107); no reserve-fund had been deposited, and the coining of new bills increased beyond all limits,

1) 每道 each piece. 道 is a classifier of written documents, papers and dispatches.

2) 抑—勒 lit. to press down with the

hand, and to rein in, both borrowed from the taming of a horse.

3) This deposit is somewhat above  $\frac{3}{7}$  of the amount of the bills issued in that time. Cf. p. 172.

till at last a bill of credit of a string of 1000 was worth but 10 cash.

The bills of credit circulated during the period of *Ts'ung-ning* (1102—1107) in the districts east and west of the capital, in *Hoai-nan*, and in the imperial residence. Only in *Fu-kien*, *Kiang-tše* and *Hu-kwang* they did not circulate. *Ts'ao-ting* is of opinion that they did not circulate in *Fu-kien* because that province was the birth-place of (the prime minister) *Tsai-king*<sup>1)</sup>.

From the fragments in Ma-twan-lin's "Examination," which inform us about the southern branch of the *Sung*-dynasty, it appears that especially under the emperor *Kao-tsung* 1127—1163 the issue of paper money was expanded in the most reckless manner, and that in this way the foundation was laid of the wretched condition to which the state finances were reduced at the close of the *Sung*-dynasty, a condition only to be compared with that of France when the blow had fallen and the full light shone upon the ruins caused by the splendid but destructive fire-works of JOHN LAW.

A short historical introduction will be necessary to understand the monetary history of that time. Up to this time the Tartars had incessantly harassed the Chinese, but after the consolidation of the Empire under the *T'ang*-dynasty they had not been able to do much harm. In the beginning of the 12<sup>th</sup> century, however, having taken advantage of the confusion of China, they had come pouring in from the northern regions. About the years 1125—27

1) *Tsai-king* was a prime minister of the emperor *Hoai-tsung* who greatly contributed to the bad condition of the empire by his unadvised way of administering the government affairs. MAYERS 1749.

they had settled themselves in great numbers on the *Hoang-ho* and in *Kai-fung-fu*, the capital of China, and from that time they kept the country in awe and were the actual masters of the empire. At last they imprisoned the emperor *Hoei-tsung*<sup>1)</sup> and his whole family, and when his son and successor *Kin-tsung* humiliated himself so far as to go to the hostile camp and to beseech of the Barbarians the deliverance of his father, he too was made prisoner, while his family and the treasures found in his palace were seized upon a short time after. With these rich spoils, consisting of two emperors, two empresses, the consort of the future emperor, all the male descendants of the Sung-dynasty, and a very numerous train of attendants, the Tartars marched back to their own dominions.

A younger brother of *Kin-tsung*, the carried off emperor, who in the south commanded a company, being the sole representative of his line was proclaimed "Son of Heaven," and, as formerly the Emperor *Yuen-ti*, he fixed his residence in the south at *Kiang-ning* or *Kien-kang* on the *Yang-tsze-kiang*, which he made the capital of the empire, awaiting better days and preparing to deliver his imprisoned relations. A sad one is the history of this prince who for a long series of years struggled with disappointments, saw his best schemes frustrated and missed the grand aim of his life. With great zeal he devoted himself to his arduous task, but he wanted that energy, that indomitable will which alone would have been able to accomplish his bold plan; moreover he tasted the sad experience that the men he trusted in most, proved to be mere flatterers and traitors.

1) This emperor had abdicated in favor of his son.

After six years' captivity his father died in the foreign country; twenty-two years later death delivered also his ill-fated brother. Exerting himself to the utmost to rescue them, *Kao-tsung* was obliged to keep a numerous army in the field and to devise a hundred various means to provide for the necessities of his soldiers. The country got exhausted and overwhelmed with paper money that after all sorts of desperate plans of redemption and conversion became totally worthless. The wretched prince seeing his relations die in captivity without being able to deliver them, his people miserable without having the power to relieve them, felt no longer proof against his wayward fortune and abdicated in behalf of his adopted son. He retired into seclusion for the rest of his days, and, after 26 years, he died at the age of 84. His successors were as unlucky as himself, the war against the Tartars devoured the entire revenues of the state, for besides the expenditure of the army, heavy tributes must be paid to the victorious enemy. The issue of paper money was continually expanded, many provinces had their own bills; high-sounding names were invented to entice the people into accepting new issues; it came even so far — and here again we have a remarkable point of resemblance to modern history — that, when the people had no more faith in the old paper currency, bills literally bearing the name of silver and gold metallics, were issued with the promise that they would be convertible into those precious metals, deposited in the treasury for this purpose. How far the Chinese government has been able to fulfil that promise will be learned from the chronicle.

Ma-twan-lin has a few lines relating to paper money, delivered by the emperor *Kao-tsung* himself. The one points to the ne-

cessity to have a reserve-fund in order to maintain the credit of the notes, the second expresses his Majesty's opinion that it is the duty of the officials to uphold that credit with the money in their cashes when there is danger of a depreciation of the bills. The latter anecdote is surely more a proof of his Majesty's simplicity and good-nature than of his sagacity. The passages read thus: [Matw. IX 30a and 31b].

日本開自用。數弊。以椿以月。高宗多。以爲張故多。中權本來。詔紹興莫能給總錢。先計四川自總。即間輕錢。常計引數。不能軍餉。開法日停。將本券。禁止。增供壞。錢重。引羅趙況侵料不錢封宗<sup>1)</sup>六。

Under the reign of the Emperor *Kao-tsung*, in the sixth month of the 3rd year of the period *Sao-hing* (1133) a proclamation was issued (in which was said) that in the province of *Sse-tshuen*, since the reign of the first two emperors of the present dynasty, the reserve-capital was always beforehand calculated for the number of credit-bills which were emitted to meet the expenditure of the border-fortifications, and the reason why this law did not operate badly was this that the heavier metal was always deposited in order to balance the lighter bills.

But when in the time that these bills were printed, the quantity of the different materials which must be procured, ever increased, the metallic deposit was seized upon, and gradually spent in consumption. This was the reason that the fixed rules of the circulation of credit-bills was violated daily. Moreover, since the minister *Tsing-siün* opened *Siuen-fu*<sup>2)</sup>, and *Tsao-k'ai* was made head of the purveyance (department), in order to supply the capital for the government purchases and the pay and rations of the soldiers, the increase of the credit-bills got greater every day, and nothing was able to check it.

1) 祖宗 are the two first emperors of the *Sung*-dynasty 太祖 and 太宗。

2) This will have been about 1163—64, when *Tsing-siün* defeated the Tartars. Fur-

ther information explaining the historical details of this allusion is not within my reach, but the meaning is clear that the cost of the support of the army tempted the government to expand paper money.

方用價緡。有謂稱最四川高宗。  
得錢減。如錢官提善沈交子。  
無自卽交百中之說。該子論。  
弊買官予萬嘗說。

When the emperor *Kao-tsung* once spoke of the bills of exchange of the province of *Sse-ts'uen*, he stated as his opinion, — in consequence of a saying that it were best to suppress all talk of the character of the paper money as an equivalent for the real holding of a property; — that when there were among the state functionaries who had 1.000.000 string of money in cash, they ought to use that money to buy them up themselves, in case the prices of the bills of exchange began to fall. (In this way) everywhere the result would be that they did not depreciate.

The two passages are taken from that fragment in which Ma-twan-lin treats of the credit-bills of the province of *Sse-ts'uen*. These bills were a continuance of the credit-paper issued there on the part of the government some time after the abolition of the private bank at *I-ts'eu* in 970. Before proceeding to a new invention of the Emperor *Kao-tsung*, the issue of frontier-bills in behalf of the army, we shall first treat of this sort of bills of which many particulars are communicated as to the quantity issued, convertibility, depreciation, etc.

#### CREDIT-BILLS OF THE PROVINCE OF SSE-TS'UEN.

數言書月。池於銀請吳副川二七  
已引省中五河會置玠。師陝月年。

In the 2nd month of the 7th year, *Wu-kiai*, second commander in *Sse-(ts'uen)* and *Sen-(si)*<sup>1)</sup> proposed to institute silver-bonds in *Ho-tsi*<sup>2)</sup>. In the 5th month the *Tsung-shu-sang* said that the number of issued credit bills was already very great, and that the losses should be considered which would be the consequences of this law (of ex-

1) *Wu-kiai* was second in rank to the commander-in-chief *Tsang-siun*. MAYERS I. 865. He was the terror of the *Kin-Tartars*.

2) *Ho-tsi* is situated on the frontiers of *Sse-ts'uen* and *Sen-si*.

多慮害成法。詔止之。蓋祖宗時。蜀交書放兩界。每界止一千二百二十餘萬。令三界通行。爲紹興末年。積至四千一百四十七萬餘貫。所有鐵錢。僅及七十萬貫。又以鹽酒等陰爲稱提。是以餉臣王之望亦請添印錢。引以救目前。不得不爲朝廷久遠之慮。當時詔添印三百萬。委之望。約度給用。卽止。後之望只添印一百萬。

pansion). Accordingly, there came an imperial decree to stop it (the issue). When in the days of the first two emperors of this dynasty bills of exchange of two (different) terms were issued in the country of So, every term amounted only to 1.200.000 string; when it was ordered to bring in circulation those of the third terms of redemption there were above 37.800.000 string; come to the last year of the period São-hing (1162) it was increased to an amount of more than 41.470.000 string. On the other hand the total amount of the circulating iron money was 700.000 string. As salt, wine, and other government productions were secretly (employed) to give assignats<sup>1)</sup> on, Wang-tsi-wang, the official charged with the victualing of the army, suggested to expand the coining of credit notes in order to meet the perplexed state which was before the eyes. He was not able, by this measure, to prevent the far-reaching thoughts (harbored by the people) against the imperial government. The order was then given to fix the amount of the notes still to be printed, at 3.000.000 string. But (Wang)-tsi-wang who was charged with the execution of this (decree), limited the quantity and coined as many as he thought would be necessary to supply the want. (The consequence was that) afterwards (Wang)-tsi-wang had coined only an amount of 1.000.000 (string) more.

Soon afterwards, however, a successor of that modest official makes use of the permission once given, to issue the remaining 2.000.000 string of paper money. In the year 1178 the officials

1) 爲稱提 to make assignats.

2) The full stop ought to be put after the character 萬。

report that the total number of bills in that part of the country amounted to 45.000.000 string, and that if the issues were not discontinued, the time would soon come that they were not current any more. They insisted on placing a fixed limit upon the amount of bills which might be issued, and beyond which it should be prohibited to issue more.

從之 “that advice was followed,” says the chronicle but contrary to this the next fragment tells us that 13 years later the credit-bills of the province of *Sse-ts'uen* were increased again with bills of a new term.

百止嘉行。小用臣開書萬五兩寧宗嘉  
以直定會。不陳禧放緝。千界宗嘉  
下鐵初。卒足咸末益通三書嘉  
咸錢每不嘗以年多三百放泰  
乃四緝能爲歲餉矣。界餘凡末。

At the end of the period *Kia-t'ai* (1204) in the reign of the emperor *Ning-tsung* the number of bills of two terms which were issued was above 53.000.000 string, and that of the bills of the third issue was also increased<sup>1)</sup>.

In the last year of the period *K'ai-hi* (1207) the head official who was charged with the purveyance of the army, stated that the total amount was not sufficient for the wants of that year. They then attempted to issue small *Hoei-tsze*, but they could not bring them in circulation.

In the beginning of the period *Kia-ting* (1208), when every string had only a worth of 400 pieces iron money, and even less, 13.000.000

1) For bills of two terms, see page 173. Bills of the third term may be those who were first issued A. D. 1107. Cf. page 175. These seem to have been convertible every year. Though no express mention is made of this fact, I have arrived at this conclusion as in a subsequent fragment (page 180) is spoken of bills of which the 93rd and the 94th terms were issued. In the year 1210 there could be impossibly a 94th term of the first issue, convertible every three years

and emitted in the years 1011 and 1072 the first being only of 23 terms. When we however consider that the payment was deferred every now and then, which we find expressly mentioned with regard to the *Hoei-tsze* or bonds, 1210 can be the year of the 93rd term of the bills which were first issued in 1107. In other authorities treating of the subject more systematically and minutely, we can perhaps find the confirmation of this suggestion.

出金銀度牒一千三百萬。收回半界。期以歲終不用。然四川諸州去總所遠者千數百里。期限已逼。受給之際。吏復爲姦。於是商賈不行。民皆嗟怨。一引之直僅售百錢。制司乃揭榜除收兌一千三百萬引。外三界依舊通行。又檄總所取金銀就成都置場收兌。民心稍定。自後引直五百鐵錢有奇。若關外用銅錢。引直百七十錢而已。

bills calculated in gold and silver had been issued at a time. When half a term was withdrawn and had returned (to the government), they were not used any longer already at the end of the same year. For from all the districts of Sse-ts'uen, thousands of persons had gone away hundreds of miles to repair to the distant (from their home-steads) exchange-office (lit. the place where [the silver-bills] were collected), and the time of redeeming had already approached; but at the time when payment was to be made, (it appeared that) the functionaries had again deceived <sup>1</sup>) the people. Thereupon trade was brought to a stand-still and the people grumbled and were dissatisfied. The worth of a credit-note (nominal 1 string) was so (reduced) that it was disposed of for 100 cash. The functionaries who were charged by the government with this, made a proclamation that 13.000.000 credit-notes should be withdrawn and exchanged by the government, and that after this the notes of the third issue should continue to circulate in the same way as before. Moreover, at the places where the payment was to take place, a proclamation was made that, in order to receive gold or silver people must go to Tsing-tu-fu where a government-office (lit. enclosure) was established to withdraw and redeem them. (The result of these measures was that) the minds of the people gradually became at ease, and that then the value of the credit-notes (of a string) was a little more than 500 iron pieces. Where across the boundaries (of Sse-ts'uen) copper money was employed the worth of a credit-note was 170 pieces (of copper money) and no more <sup>2</sup>).

1) 爲姦 to play, to make the wicked.

2) As we saw in the foregoing chapter,

iron money was exclusively used in those western parts of the empire.

嘉定三年春制總司收兌九十一界二千九百餘萬緡。其千二百萬緡以茶馬司羨餘錢及制司空名官告。總所椿管金銀度牒對鑿。餘以九十三界錢引收兌。又造九十四界錢引五百餘萬緡。以收前宣撫程松所增之數。應民間輸納者每引百帖八千。其金銀品搭率用新引七分。金銀三分。其金銀品色。

In the spring of the 3rd year of the period *Kia-ting* (1210) the functionaries who were charged with this, had redeemed 91 terms, to a total amount of more than 29.000.000 string. Of these they had redeemed 12.000.000 string with the balance of the account of the tea and horse officials<sup>1)</sup>; and it was announced to the illustrious functionaries of the Board of works<sup>2)</sup> to exchange for the notes still in the store-vaults, the value of which was calculated in the gold and silver that was in the cash of the functionaries who superintended the border-fortification, the damaged (lit. bored) *Hoei-tsze*. What then remained should be exchanged for credit notes of the 93rd term. There was also made a 94th term of the credit-notes to an amount of more than 500.000 string to redeem with these what at one time had been issued by the officer *Tsing-sung* who had been sent out to relieve the people<sup>3)</sup>. When those credit-notes were employed by the people to pay the taxes, they had a value of 8000 a 100 pieces. The sort which had been calculated in gold and silver was added to it (i. e. were accepted at the same value). As a rule (the taxe swere paid) in 7 parts of the new credit bills and 3 parts of gold or silver (bills).

The quality and sort of that gold and silver was appreciated on the part of the government in such a way that there was not a single piece that was not defective and too short (all of them were of a bad

quality). For 100 old bills (*Hoei-tsze*) 20 new credit-notes were received. (The consequence of all this was that) when in the 1st year (1208) and in the 3rd year (1210) thus twice the old *Hoei-tsze* had been withdrawn from circulation, the value of the new (notes) was in the end again equal to the old<sup>1)</sup> ones.

We now return to the beginning of the reign of the emperor *Kao-tsung*, when in behalf of the army a new sort of bills was issued. [Matw. IX 24a—30a].

#### THE HOEI-TSZE OR BONDS.

州關部致通。而辨有州<sup>2)</sup>元高

客付見詔重楫用請屯因紹子。  
人婺錢戶難不錢。椿駐。婺興

Under the reign of the emperor *Kao-tsung* in the first year of the period *Sao-hing* (1131) the officials requested in behalf of the camp and halting-stations in the province of *Wu-tšeü*<sup>2)</sup> for the necessary money, in order to make the palisades (fortifications). As these parts could not be reached by water, and the weight of the money made the transport (in another way) troublesome, it was ordered to the ministry of finances to make frontier-bills for ready money and to send them to the province of *Wu-tšeü*, where every stranger who entered this province, was summoned at the custom-house. As soon as those frontier (bills) had arrived, they were forwarded to the custom-house for goods to be exchanged there for money.

If there were some (of the merchants) who wished to receive in return receipts for tea, salt, aromatics, or other articles of commerce, this was left free to the functionaries of the districts. With frontier-bills the government purchases of grains were paid. In the beginning it could not be prevented that they (ready money and notes)

<sup>1)</sup> 故。昔 means obviously 故昔。 | <sup>2)</sup> *Wu-tšeü* is situated in the province of *Sse-tšuen*.

務。樁塚。見錢印。造關子。貨不可。錢本。予民。何以信。極論其不。可。於是罷交子。有司浸失。子務。臣僚言。朝廷措置。見錢關子。有司浸失。子務。臣僚言。朝廷措置。六年二月。詔置行在交。而引者。聽於是州縣。以予充糴。本未免抑配。以錢。有願得茶鹽香貨。請入中執關<sup>1)</sup>。赴權貨務。請

were settled on a par<sup>1)</sup>). The custom-house for goods paid only one part on the three on the day that they were redeemed. The people complained of this, and were dissatisfied<sup>2)</sup>.

In the second month of the 6th year (1136) there came an order to establish a bank for the issue of the bills of exchange (*Kiao-tsze*) which were already circulating. The ministers then said that when his Majesty had instituted the frontier-receipts for ready money, the functionaries, charged with the execution, had entirely lost sight of the original intention. When now a change was attempted, and bills of exchange again were made, while the government was without metallic deposit, how would the people have faith in them. They concluded that it might not happen. Then the bank for the issue of bills of exchange was abolished again, and the custom-house for goods was ordered to have frontier-notes coined to (supply) the ready money wanted for the construction and repair of palisades and parapets.

1) A sinologue will observe that there are a great many difficulties in this fragment. In

**執關** the monogram **關** stands for

**關子**, the frontier notes — and the literal translation is: the notes in hand or in possession, i. e. as soon as the notes had arrived. The position does not admit to take **關** in a locative case with the meaning of "at the frontier." For the same use of that word Cf. page 218, note 2.—

**請** has here the meaning of **清** to clear, to exchange. In the following parts it occurs three times more in that same signification, Cf. p. 187, 205 and 212. A similar expression is found in WILLIAMS' Dictionary

*in toce* **領** p. 540a — **抑配** is still more difficult to explain. I believe the meaning is this: In the beginning, when those bills were first issued the government settled the worth of paper and metallic money at the same ratio, notwithstanding, at the very first redemption, the restitution was only a third part of the sum for which they had been given in payment. The same expression occurs again Matw. IX 29a Cf. page 201

2) The single place where DE MALLA in his Hist. Gén. d. l. Chine alludes to paper money is when treating of the institution of the frontier-notes of the province of *Hsi-tien* Vol. VIII p. 502. He has only one addition to the information which Ma-twan-lin gives, viz. that those notes were stamped at ten corners (*marguer à dix coins*).

二十九年。印給公據關子。

筭請茶鹽香鑾等歲以一

In the 29th year (1159) the government coined frontier-bills in order to provide for the whole garrison<sup>1</sup>). To receive them people went to the central-office of three districts. *Hoai-si* and *Hu-kwang* were each to receive frontier-bills for 800.000 string, and *Hoai-tung* bills in behalf of the general garrison for 400.000 string. Those bills were of 5 different sorts of from 10.000—100.000 pence (10—100 string<sup>2</sup>)). These bills for the general garrison were made for a circulation and use of three years. In the second year it would be allowed when payments (of taxes) were made in copper money or silver at the government offices, to pay in these bills half of the sum due.

In the 30th year (1160) *Tsien-twan-li*, vice-president of the ministry of finances possessed of an imperial authority issued again *Hoei-tsze* (to meet the necessities) of the palisades (fortifications). Of the ready money circulating within and without the fortified places, that which agreed with the pieces issued by the government, might be entirely exchanged for *Hoei-tsze*. People went to the left government-treasury to deliver it. In the second month of next year an order was dispatched to the *Hoci-tsze* bank and to the officials attached to the government stores<sup>4)</sup> of tea, in which was said that it would be expedient to settle<sup>5)</sup> the accounts of

1) 公據 lit. the whole occupation.

We see here a considerable expansion of the first issue, which was only for the fortification of the encampments. The fact reminds us of the time of Louis XIV of France, when similar billets were issued, called, "*Billets de l'extraordinaire des guerres, de l'artillerie, de la marine*" Cf. *Les Economistes du dix-huitième siècle*. Paris, Guillaumin. 1843. page 444.

2) They were probably for such a large amount as they ought not to circulate as money, but only served to pay the merchants who purveyed the army.

### 3) The sentence 見錢....會子

is an example of a rhetorical inversion or ante-position.

4) 茶 嘉 government-stores of tea.  
場 is an enclosure, set apart for the  
gathering of grain.

5) 請, this is the second passage in which this word is used in the meaning of  
請 Cf. p. 187.

押。者 件<sup>2)</sup>告 徒 支 斬。僞 也。不 獨 惕 見 錢 以 為 本。又 提。

 解 監 官 名 上 自 若 願 處 定。  
 赴 戶 部 分 目<sup>3)</sup>上 自 若 願 處 定。

the travelling merchants (with the government) by means of receipts for tea, salt, aromatics, alum, and other government productions, which (estimated in money) annually represented a sum of 10.000.000 string. In secret it might serve to support (the State-finances, as these receipts) balanced an actual possession of merchandise, (and the government had moreover the advantage) that it had not to rely on metallic money alone as basis (in exchange), while on the other hand it had not entirely to look up to the *Hoei-tsze* to meet the wants of the empire.

In the 12<sup>th</sup> month of the 32<sup>nd</sup> year (1162) an order was issued to institute punishments for forgery of *Hoei-tsze*. The offender was put to death, and the reward (given to the informer) was 1000 string. If he did not claim that reward, it was given as an perquisite to the master-controller. If there were among the villains and their accomplices<sup>1)</sup> some (who denounced themselves) by confessing and avowing their crime, they could by special permission be exempted from punishment. They were also allowed to receive a reward in money, or if they wished it they were free to be rehabilitated in their former reputation and honor<sup>3).</sup>

Now *Hoei-tsze* were made daily. The functionaries of the mint partly impressed their seals on them, and every 10.000 bills were forwarded to the ministry of finances to be sealed there again.

The paper for the *Hoei-tsze* was at that time taken from the provinces of *Hoei-tšeu-fu*<sup>5)</sup> and *Tši-tšen*<sup>6)</sup> and afterwards they were made in *Tsing-tu-fu*<sup>5)</sup> and also in *Lin-ngan-fu*<sup>6)</sup>. In the beginning the *Hoei-*

1) 窩藏之家 are accomplices.

*tsze* circulated only in the parts of the two *Tše* rivers, afterwards it was ordered to circulate them in *Hoai*, *Tše(kiang)*, *Hu-pěk* and west of the capital. Except at the offices where the duty on salt<sup>1)</sup> was paid and metallic money was used exclusively, it was allowed at places which could not be reached by water or by roads, so that the government could not furnish another kind of money, entirely to make use of *Hoei-tsze* in exchange<sup>2)</sup>. In the districts and encampments situated along the river it was a rule that people paid one half in money and the other half in *Hoei-tsze*. When a mort-gage was made, or lands and houses, cattle, food, waggons, vessels, and other similar things were sold the people were free<sup>3)</sup> to use only *Hoei-tsze*.

Under the reign of the Emperor *Hiao-tsung* in the first year of the period *Lung-hing* (1163) it was notified to the officials who coined the *Hoei-tsze* that the year-name of *Lung-hing* and the state-seal of the minister of finances should be the seals to be used to stamp the *Hoei-tsze*. Then *Hoei-tsze* of 500 cash were made, also were there made of the value of 200 and 300 cash<sup>4)</sup>.

In the 5th year (1167) a *Hoei-tsze* bank was established in *Kiang-tšeü*.

1) An income-tax levied on every one of the people. It is remarkable that the government did not accept those taxes in paper money.

2) **解** to transmmit, to hand over. — **發** to pay out.

3) **聽** has here the same meaning of to be allowed as at the foregoing page 189 note 4.

4) Since the *Hoei-tsze* were generally used as medium of exchange, they were no more of those large amounts of 100 strings of cash.

之。萬 銀。及 出 予 祚。司 年。乾  
兩 一 南 內 之 言 諫 因 道  
收 百 庫 庫 敝 會 陳。左 二

In the second year of the period *Kien-t'ao* (1166) in consequence of what was said by the councilor of the left side, *Yen*<sup>1)</sup>, viz. that the *Hoei-tsze* had greatly diminished in value, a sum of 1.000.000 ounces of silver was given out of the left and south treasury (to redeem the depreciated paper money).

After these fragments we have a minute report of an official of the ministry of finances, from which it appears that in the last seven years (1161—66) especially, an enormous quantity of paper money had been issued. When afterwards the government ordered that the taxes for the full amount should be paid in ready money, these bills were soon reduced in value. In order to avert the dangers resulting from a depreciation, arrangements were made to convert the old worthless *Hoei-tsze* into another sort of paper currency; a measure which seems to have succeeded.

But when a large number of *Hoei-tsze* had been redeemed in this way, new notes were issued again. The worn and torn bills were accepted by the government at 10 per cent of their original value and, it is a noteworthy instance of tyrannical government that a heavy punishment was inflicted on such private persons as ventured to vie with the government, and buy them at a lower discount.

Our chronicle relates the particulars in the following way:

道。百 二 過 月。二 至 十 詔 琢。郎 月 三  
止 餘 千 會 共 年。乾 一 與 言 中 度 年。  
乾 萬 八 予 印 七 道 年。三 自 唐 支 正

In the 1<sup>st</sup> month of the 3<sup>rd</sup> year (1167) *T'ang-tsuen*, the official who was charged with the disbursements at the ministry of finances, reported that from the 31<sup>st</sup> year of the period *Sao-hing* (1161) till the 7<sup>th</sup> month

1) *Yen* is the same as *Liang-yeu*, a functionary who continually warns the government against the perils of an overissued paper currency. Cf. p. 203.

2) 道 a classifier of dispatches.

道二年十一月十四日以前。共支取過千五百六十餘萬道。除在官司椿管循環<sup>1)</sup>外。其在民間者。有九百八十萬道。收換。截至三年正月六日。共繳進過一百一十八萬九千餘貫。尙有八百餘萬貫未收。大約每月收換不過六七十萬。緣諸路綱運。依近指揮。並要十分見錢。州縣不許民戶輸納會子。是致在外會子往來商賈。低價收買。輜湊行在。

of the 2nd year of the period K'ien-tao (1167) all together more than 28.000.000 *Hoei-tsze* had been printed. Before the 14th day of the 11th month of the year 1167 there were paid and received above 15.600.000 *Hoei-tsze* (total 43.600.000). Besides those which were in deposit with the functionaries who kept the frontier-fortifications in repair in order to bring them in circulation'), there was a number of 9.800.000 which already circulated among the people. Since that 14th day of the 11th month the repayment had begun, up to the 6th day of the 1st month of the 3rd year there were presented for repayment above 1.189.000, so that there remained more than 8.000.000 which had not been received. Upon the whole the number which was redeemed monthly did not exceed the amount of from 600.000 to 700.000.

According to a law<sup>2)</sup> to which all the districts were subject, and in accordance with a regulation lately prescribed, the people were not allowed to pay their taxes<sup>3)</sup> any more in *Hoei-tsze*, but were obliged to pay every 10 parts in ready metallic money. The consequence of this was that the excluded *Hoei-tsze* by and by were accepted by the merchants at a reduced value, when something was bought. (In order to prevent a further depreciation which might be fatal to the credit of the state), and to collect together<sup>4)</sup> all the *Hoei-tsze* that were in circulation,

1) 循環 to go in a circuit.

2) 綱 a law.

3) 輸納 to pay taxes.

4) 輻湊 (=輶) lit. the spokes of a wheel together with the nave, is a metaphorical expression meaning to collect in one centre (the bank) the circulating bonds from all quarters. Cf. p. 206.

所以六務支取擁并。詔給降度牒及諸州助教帖各五千道付權貨務召人全以會子入納候出賣將盡申取<sup>2)</sup>六月戶部曾懷言會子除收節續給降務欲盡收會子也。廷子在還外尙有四百九十萬貫在民間乞存留行使十二月以在民間會子有破損者別造五百萬換給他日又詔損會貫數可照者並作上供錢解發鉅室以低價收者坐罪。錢

for which purpose six different banks were established to receive and collect them, it was ordered to issue bills estimated (at a certain sum), and (further) it was ordered to give a number of 5000 to the support of every *T'seu*-district in the country, and to send them to the custom-houses (in those districts) and then to invite the people to exchange their *Hoei-tsze* there (for those new bills). After this the government should wait till (those 5000 bills in every province) would be sold out. If the demand for them continued steady, the government, if it wished entirely to withdraw the *Hoei-tsze* from circulation, for a certain time might continue to emit these bills at the banks. In the 6th month *Ts'ang-hoai*, the minister of finances<sup>3)</sup>, reported that besides the *Hoei-tsze* withdrawn from circulation (by the government), there still circulated (*Hoei-tsze*) for an amount of 4.900.000 string among the people. He requested to keep these in circulation (and not to redeem them). In the 12th month (1167) there were separately made *Hoei-tsze* for 5.000.000 string, because there circulated among the people many that were damaged and worn. Shortly afterwards another decree was issued that the value at which worn *Hoei-tsze* of a nominal worth of 1 string could be exchanged should be 100 cash. This might frequently be repeated till the money, procured by the government for this purpose, would be wholly spent. The obstinate houses that would continue to receive them at a reduced value should be tried and punished for the offence<sup>5)</sup>.

1) 教 to give instruction.

see the next fragment.

2) 申取 the demand increasing.

4) 收還 to draw and pay back.

3) 戶部 is here for || 尚書,

5) By this the government would compel the holders of torn bills to exchange them

The next fragment is remarkable for the great many particulars it contains regarding the exchange of old bills for new ones. The way in which the conversion was effected was now much less tyrannic than the one just mentioned; and this must be mainly attributed to the cleverness of the man who managed these affairs. But the end shows again that the best measures were ineffectual when the state finances are so hopelessly deranged. Immediately afterwards we read that twice in succession the redeeming the *Hoei-tsze* was deferred, each time for a period of three years, while at the same time the issue was increased.

In the 4th year (1168) the old *Hoei-tsze* which were already drawn back and which were damaged, obliterated, quite torn to pieces and full of holes, were forwarded to the *Hoei-tsze* bank (with the order) to make them heavier (in the future). In the previous (third) year a new issue of *Hoei-tsze* had been coined for an amount of exactly 10.000.000 string, and in proportion as (the bills) of that issue were coined, new bills were exchanged for the old ones. *Ts'ang-hoai* who was the head of the ministry of finances had, at the same time that he carried into effect the command (to make bills) ordered that money should be cast. The *Hoei-tsze* already printed and put up, were transferred to the left treasury. Those of them which would be smuggled and get outside the issue-department should not be accepted in payment of taxes.

*Tsiang-fei* said in a report: During the last month the *Hoei-tsze* which were in use have been withdrawn and redeemed with gold and silver (now the same course must be pursued), and if the number of

at 10% of their original worth, and every private person who continued to accept them at a higher rate should be punished.

此月用會子收回金銀。若會子稍多又出錢銀收之。陳俊卿奏曰。歛散抑揚。權之在上。可以無敝。其年四月一日興工印造。至歲終可造一千萬貫。措置收換舊會。每道收糜費錢二十足零百半之應。舊會破損。但貫百字存印。文可驗者。卽與兌換。內有假僞。文可辨。驗人吏送所司。其監官取朝廷指揮。每驗出一貫僞會。將追究元收兌會子人錢三貫。與辯驗人如官吏用心訛事。

issued *Hoei-tsze* gradually increases, gold and silver must continually be given to withdraw them.

Developing (this principle), the report of this excellent minister says further: The means to make that they do not depreciate, is now to collect them together, and then again to expand them, at one time to withdraw them and at another time to bring them in large quantities in circulation, and in this way always to balance them that they may remain at full value. Now if on the 1<sup>st</sup> day of the 4<sup>th</sup> month of this year workpeople are appointed to print and coin them, an amount of 10.000.000 string may be ready at the end of this year. When at that time the exchange of the old *Hoei-tsze* begins, on every bill which is exchanged a premium of 20 cash shall be demanded. It will be sufficient that the piece which is left of the bill presented, is a little more than half (the original paper): and when of the old bill which is torn or damaged only the character 貫 (*Kuan-string*) or the character indicating the number of hundreds of cash, is left, and the seals can still test the genuineness, it may be presented to be exchanged. Now when among those bills are forged ones, the functionaries who examine them must dispatch them to the department (where they are made). Those functionaries who examine them will receive further instruction<sup>1)</sup> from the government. Every time when the examination brings to light a forged bill of a string, the person who after having been traced out, is proved to have exchanged this bill first, shall have to pay a sum of

1) Probably further information, f. i. uniqueness could be recognized about secret marks by which the genuineness could be recognized.

無假僞。具姓名推賞。自十二月一日始置局收換。至明年三月十日終。收自淳熙三年詔第三界四場會子庫將第四界四茶銅錢。各展限三年。令都茶百戶二百萬。板接續印造會子。當時南庫椿管。半部萬板。銀換收者四百萬。而南庫以半爲會子。歲入一千二百萬耳。流於外者纏二百萬耳。行金其戶外者。

3000 copper pieces in money to the functionaries who have verified and proved it. When those functionaries use their common sense they will terminate the whole affair without having forged bills. Both the name and surname of the offenders shall be published as a punishment for their offence. From the 1st day of the 12th month the office for the exchange of *Hoei-tsze* was opened, this lasted till the end of the 10th day of the 3rd month of the next year (during 3 months and 10 days). After that time it was all over, nor was it practiced again.

In the 3rd year of the period *Sun-hi* (1176) it was proclaimed that the 3rd and 4th term of payment<sup>1)</sup> should be delayed three years each. Furthermore it was ordered that the depot where the government stores of tea were kept and the *Hoei-tsze* were issued, should take the copper plates of the 4th issue, and continue to coin and print *Hoei-tsze* for an amount of 2.000.000 (string) and to send them to the Southern treasury, charged with the administration of the border fortifications.

At that time the amount of the revenues at the Department of finances was 12.000.000 string in the whole year, half of which consisted of *Hoei-tsze*. Of these the Southern treasury took 4.000.000, exchanging them for gold and silver, and what was then again brought in circulation did hardly amount to 2.000.000 string.

1) This is the first time that we read of periodical terms of the *Hoei-tsze*. The first issues of the year 1131 seem not to have had those regular terms of redemption as the bills of exchange of *Sse-t's'uen* (p. 171). The *Hoei-tsze* were originally a sort of currency used in the army, very much the same as that issued in times of war in Europe for instance by Frederic the Great and in the late French-German war, convertible either after a fixed term or immediately after the expedition. In China this sort of bills was issued to be

redeemed after 3 years; other issues followed probably for the same interval of time till at last they were also made with periodical times of redemption; but we do not know how long the whole time of circulation was then regulated. Now we find it instanced that when a term to repay the notes had come, the necessary money was wanting and the payment was delayed for another period of three years. We shall soon see that the imperial government was not ill-pleased with the measure, as afterwards the redeeming of new issues was likewise postponed.

The two following fragments contain some information on the money among the Tartars who had established themselves in the northern parts of the empire and in *Kai-fung-fu* the Chinese capital. In many respects this part is important. It corroborates the fact mentioned before that the Tartars had learned the use of money from the Chinese, and how they managed to transport Chinese money from the neighboring southern parts over the *Hoang-ho* and to bring it in circulation in their own territory. Furthermore we are told how the notes were signed and sealed, and herein do we find the key to decipher some difficulties presented by the almost invisible seal-marks on the note of the *Tai-ming-dynasty*, a photograph of which has been subjoined to the Addenda. As the whole system of paper money among the Tartars was borrowed from the Chinese we may safely conclude, that the Chinese notes were signed and marked in the same way as related in this fragment.

pital) a bank for the coining of *Hoei(tsze)*, and called this paper money *Kiao-tšao* (i. e. bills of exchange). Like the ready metallic these notes circulated, but unobservedly they drove the copper money out of circulation there, and entirely transferred it to the North. And no sooner had they crossed the (*Hoang-Jho* than they used money and no notes. The design of those notes was mostly "Bills of exchange of the Southern Capital"), and it was the wooden seal of their department of finances which determined their value. From a report lately published, of an assistant-official of the *Sang-su-šang*<sup>2</sup>), who was charged with the issue and management of the *Hoei(tsze)*, appears that in the "Southern Capital" was the issue bank for the notes, and that they were made of a value of from 1 to 3 string. As soon as those bills of exchange were regulated, the people were allowed to bring their money and receive notes in return. The state money and the money coined by private persons, circulating in the districts south of the river, was sent (to the north) as soon as it was received in payment at the treasury. The cost of the bringing (them) in circulation, labor and ink amounted to 15 cash a string. After a term of 7 years they were redeemed. When redeemed before the proper time only 70% of the value was received. He who forged them was beheaded and the reward of the denunciator was 300.000 cash. On the front and back of the paper they were warranted by the seals impressed on them by the officials charged with the control at the department of finances, and by the officials appointed

at the bank of issue. At the four corners of the notes dragons and cranes are engraved as ornaments.

When in the period *K'ien-tao* (1165—74) on the part of the districts of *Yeu-Si-* and *Hu*, *Tsung-fan* was sent to *Pien-king*, the capital of the empire of the *Kin-Tartars*, there circulated bills of exchange which contained all that we have just seen. At that time shreds of paper weighing against money, were employed in China. In this way *Hoei-tsze* were found in the eastern and southern provinces; moreover there were credit notes for the province of *Sse-tsh'uen*, bills of exchange for the *Hoai* regions, and *Hoei-tsze* for the *Hu* country; and when at the places where metallic money was cast, they worked no longer after one and the same model, and because of the continuous want of metallic money, (the number of notes) had ever increased while they had fallen in value, (this resulted) that they were no longer a medium of exchange weighing against a real property<sup>1)</sup>; and this was the reason that they (the *Kin-Tartars*) employed only the bills of exchange in circulation, and (that they collected) in *Ho-nan* the old Chinese money and carried it over to the north of the river. It seemed that the exchange for bills was very easy.

何九再今年子僚三子。入詔熙光宗  
以年則展爲界言年。各界第七年。紹  
示矣。爲至限。三會臣展會。

In the 1st year of the period *Sao-hing* (1190) under the reign of the emperor *Kwang-tsung* it was ordered to prolong the 7th and the 8th term with three years each. The ministers observed that the fixed term for *Hoei-tsze* was three years, but that now in consequence of the double

1) In the expression 稱提 the character 稱 is here superseded by 秤.

行。執更額。千界。詔元寧限。立第信。  
奏增額萬以會元宗。定十界。詔  
不許外爲三子年。慶造

expansion, (that term) had already come to 9 years. By what means was the confidence of the people to be preserved. (For answer) there came an imperial order that with the 10th term the regular intervals should be restored.

In the 1st year of the period of *King-yuen* (1193) under the reign of the emperor *Ning-tsung* an order was issued that the limits of the *Hoei-tsze* should be a fixed amount of 30.000.000 string. And when they (the *Hoei-tsze*) were increased beyond that amount, it was allowed to stop them, and bring them forward that they might not circulate.

The phrases and expressions especially of the latter part of the fragment which now follows, are so vague and obscure that I have long hesitated whether I should insert it. However, as I have till now never shunned the difficulties in Ma-twan-lin's text, I will try also to explain these to the best of my ability, the more because the fragment gives a lively picture of the always increasing misery caused by an imprudent issue of paper money.

免提新會之最嚴。而根未稱換納。換臨安府官局收添貼。二十萬乳香湊成綾紙度牒官誥。金銀度牒官誥。目言嘉定二年。臣僚

In the 2nd year of the period *Kia-ting* (1209) the ministers reported that the *Hoei-tsze* of three terms (of redemption) were so increased in number that they were no more a means weighing against an actual possession of money. Then an order was given to the treasury which supplied the wants of the border fortifications to issue notes estimated in gold and silver, (and which should be printed) on the part of the government on paper mixed with satin, and (saturated with) olibanum. Of these should be collected to a number of 200.000, to supply therewith the state bank at *Lin-ngan-fu*. When this sort which had been added to (the already circulating bills)

志。酷 敷 提<sup>1</sup>。用 而 井 徒 出。而 連  
吏 抑 而 假 重 相 流。估 奇 株  
得 配<sup>2</sup>。科 稱 刑 望。鄉 稽 政 速

was received (at the Bank), in the withdrawing and redeeming of the old *Hoei-tsze*, a new note was exchanged for 2 old ones, and it was looked sharply to that these new *Hoei-tsze* should balance an actual possession (of money). It could not be prevented that accusations and denunciations arose everywhere, for the root was torn up, trunk and all, (i. e. they sought to get out of it as much as possible) and consequently there arose an inquisitive government. In vain there circulated lists of prices (i. e. nothing was either bought or sold); the different villages and places looked out for each other, and the punishments for the use of forged assignats were made severer<sup>1</sup>), and moreover it was dictated that (the notes) should be put on a par<sup>2</sup>) (with money); the tyrannic officials carried their point<sup>3</sup>).

In the last part of his "Examination" [IX 32a—33b] Ma-twan-lin treats of the paper money of the Eastern provinces of *Hoai* and *Hu*, instituted there at the time that the government had already enjoyed in the North and West the large profits accruing from an unlimited issue of a currency which could be made at so little cost. The following passages taken from these chapters are interesting as they reveal the causes which ultimately led to the total depreciation of the paper currency in consequence of its being circulated over the whole of the immense realm.

1) 用假稱提 Cf. page 164.

2) 欽配 is the same expression which in the beginning of the history of the *Hoei-tsze* caused difficulties. Cf. page 187.

3) Cf. with this passage and that of p. 207—209 the next fragment painting the misery causedly an overissue of paper money in Austria, quoted from Prof. SUMNER, "History of American Currency" p. 313. In 1810, the next stage was reached, a stage which the student of paper money meets so regularly in its history, that he anticipates it sooner or later, in one form or another, in every new instance. A new

class of notes was issued called "redemption-notes," to represent coin, and to exchange for paper at the rate of one for three. By using these, the government prevented its expenditures from running up such enormous figures. This plan, and others intended to support it, failed to attract even the popular attention; all confidence in the promises of the government was lost. The misery was wide and deep, reaching even the well-to-do classes. Persons on salaries found themselves in the pecuniary position of day laborers; the peasants and country people who tilled the soil had its products for food, but trade was brought to a stand-still."

In the last year of the period *Sao-hing* (1162) regarding the circulation of *Hoei-tsze* there was no distinction made as yet between the two *Hoai*-districts and *Hu-kwang*.

In the 1<sup>st</sup> year of the period *Kien-tao* (1163) *Lin-ngan-tseu*, vice-president of the department of finances, reported that in consequence of an inquiry (made) at the department, (it appeared that) the reckless cost of printing and the supply of the *Hoei-tsze* were very great, and as the deposited capital was not sufficient, the result would be that the paper should fall in value. He therefore insisted upon procuring a separate number of 200.000 *Hoei-tsze* on which should be printed on the reverse that sent to *Hoai-nan*, they should circulate in these districts of the country and in the encampments, while they might not pass the boundaries to other districts.

In the 6<sup>th</sup> month of the 2<sup>nd</sup> year (1166) it was ordered to coin separately bills of exchange (*Kiao-tsze*) for an amount of 300.000 string, of a value of 200, 300, 500, cash and of one string, which were to circulate only in the subdivisions of the *Hoai*-regions. To further the withdrawal of the *Hoei-tsze* circulating before that time, they must be received as payment in exchange at a general rate of one half in bills

1) *Hoai* is in the North-East, *Hu* in the South-East of China. The bills of the *Hoai* regions were afterwards allowed to circulate in the *Hu*-regions.

鎮江建康府榷貨務。使淮人之過江。江南人之渡淮者皆得對換循環使用。然自紹興末年以前。銅錢禁用於淮。而易以鐵錢。會子於既用於淮。而易以鐵錢。是商賈不行。淮民以困。司諫陳良祐言。莫若如舊。右從民便。鐵錢已散。銅錢已收。且令兼行。以鐵錢二。交子可以盡罷。無當疑也。上曰。朕亦知其不可。

of exchange (*Kiao-tsze*) and the other in metallic money. This not being convenient to the coming and going<sup>1)</sup> (the merchants), it was ordered to provide for a quantity of 200.000 *Kiao-tsze*, and for as many *Hoei-tsze*, and to send them to the custom-house for commodities of *Kien-kang* and *Tsin-kiang-fu*, in order to make that the people coming from *Hoai* (i. e. the North) and crossing the *Kiang*, and those who coming from the South of the *Kiang* crossed the river *Hoai*, could all exchange their money (at that office) for the money which was current (within the boundary-line) where they made use of it. Before the last year of the period *Sao-hing* (1162) the use of copper money was prohibited in the district of *Hoai*, and iron money had been substituted for it<sup>2)</sup>, and the *Hoei-tsze* which had been employed till now, were also superseded by *Kiao-tsze*; and when this paralyzed trade and the people of the district of *Hoai* were in want, *Liang-yen*, an councilor of the right side said that there was nothing so good as the old regulation and (that nothing was) so convenient to the people, as when the iron money was spread and the copper money was (generally) received, and that, if it was ordered that the two sorts should circulate together, so that 2 pieces of iron money were equal to 1 piece of copper, this would undoubtedly result in the abolishment of the bills of exchange. The emperor said, we too know that this will not do any longer, were it alone because in those parts a legion (*Kiün* = 12.500 soldiers) of lancers is encamped; and when *Liang-yen* too reported that the *Kiao-tsze* were inconvenient, all the

1) For in that case they were still obliged to carry with them the heavy copper money.

2) Compare what is said on this measure in the passage quoted page 147. When

confronting these two passages it appears pears that the whole circulating medium in the Eastern regions coin as well as the paper money has undergone a change in that period.

行。只爲武鋒一軍在彼。良祐又奏交子不便。詔兩淮郡守漕臣。各條其利害。乃謂所降交子數多。而銅錢并會子。又不過江。致民旅未便。詔銅錢并會子。又不降交子。又不過江。是數見錢納官。應在官交子。許作舊過江行使。其民間交子。日下盡數赴行在左藏庫交納。○後又詔銅錢并會子。依舊過使淮交者從便。至嘉定十五年。行印及三百萬。其數日增。價亦日損。稱提無其術也。

magistrates and officials for the transport of grain in the two *Hoai*-regions were directed that each of them should send in a report on the advantages, disadvantages (in use), and the number of the bills that was issued.

But the copper money and the *Hoei-tsze* not being allowed yet to come across the *Kiang*, this made that the people living there as well as the travellers still experienced the inconvenience. On this the order was issued that the copper money and *Hoei-tsze* on the same footing as before might circulate and be employed across the *Kiang*. The *Kiao-tsze* which at that time still circulated among the people might be received at the government offices in exchange for a metallic currency made for this purpose. The *Kiao-tsze* in store at the government (offices) which were still extant, were from that time to be sent up to the left government treasury in order to be converted there.

After the order was issued that the copper money together with the *Hoei-tsze* as in olden times might circulate over the *Kiang* (in the districts of the *Hoai*), it was also ordered that in the divisions and sub-divisions south of the *Kiang*, where the *Hoai-kiao-tsze*, circulating there, were considered by the people to be very convenient, up to the 15<sup>th</sup> year of the period *Kia-ting* (1222) should be printed in addition for an amount of 3.000.000 (string). However, since that time this number was increased daily, and the value of this paper consequently diminished daily and the character of the paper money, i. e. the balancing an actual possession of the merchandise, lost its effect also here.

Under the reign of the Emperor *Hiao-tsung* in the 1<sup>st</sup> year of the period *Lung-hing* (1163), *Wang-kiō*, superintendent of the purveyance for the troops in *Hu-kwang*, said that at *Siang-yang(fu)* (in the north of *Hu-pěk*) and *Ying* (the then capital of *Hu-kwang*), and at other places the heavy payments for the army were settled<sup>1)</sup> both in copper money and in those (notes) for silver<sup>2)</sup>. Therefore at the great army-cash where the money for the border fortifications was deposited, "convenient" *Hoei-tsze* of a value of 500 and 1000 cash had been printed. Emitted in behalf of the camps they circulated as ready money west of the capital and in the districts of the province of *Hu-pěk*, where they were in general circulation and use<sup>3)</sup>.

(As the want of paper money was thus obvious) he requested, in case the *Hoei-tsze* were coined again, to have printed on the *Hoei-tsze* which should be emitted, that they should reach (lit. below i. e. to the south) as far as the territory of the transport-officers of *Kiang-si* and *Hu-nan*<sup>4)</sup>. Furthermore the bills presented (at the offices), and circulating among the people ought to be closely examined, and the torn and illegible (effaced) old tea-receipts should be confiscated by the officials in order to make again *Hoei-tsze* of them. That advice was followed. After the

1) 請 occurs here once more in the signification of to settle, to pay.

of the capital of *Hu-kwang* (*Ying*).

2) 銀品搭 lit. those notes for silver which were added to the already circulating credit notes; it is the notes which were estimated in silver. Cf. p. 185 and 200, where the same expression is found.

3) Originally issued in behalf of the army they soon got a more extensive circulation in *Hu-pe*, and in the neighborhood

4) 鑄勘 is here borrowed from the making of money. 勘 is to be taken in the meaning of "to collate."

5) The meaning is that they were to be current also in these southern parts, and for that reason should be given in payment by the functionaries who bought there grain for the government.

license to make and issue them had been granted (to the army-cash), the number of the bills which were coined, also increased daily. But now the bills issued by this office circulated in the above-mentioned districts and in *Kiang-ling*<sup>1)</sup>, situated south of the capital, a place where trade was very brisk, and to the merchants of those parts (such a limited circulation line) not being convenient, the office for the issue was ordered to transfer the copper plates from which the bills were printed to the *Sang-šu-šang*. Further (it was ordered) to redeem the burnt and torn notes of the issued tea-receipts and the circulating *Hoei-tsze*, and that the central office for issue should be called "the meeting-place of the merchants of the districts of *Kiang-ling* and *Ngo-tſeu*"<sup>3)</sup>. The government salt annually bought and sold by the merchants produced returns to an amount of several millions of strings of money.

As (on account of the cost of transport) it was difficult to get in return a remittance in goods, and as the *Hoei-tsze* of the province of *Hu-pěk* might not cross the boundaries of that province, *Hoei-tsze* were generally taken with which tea-receipts were bought, and these were sent to the districts of *Kien-kang* and *Tsin-kiang-fu*, and other places where they were in demand in trade. But who shall of his own accord go and buy tea-receipts now that the circulating *Hoei-tsze* are

1) 水陸 I take for *Kiang* (江) *ling*, situated in the south of *Hu-pěk*; three lines lower mention is made of 江陸 and the substitution of 水 water for 江 river is very possible.

2) As to the signification of 輻湊 (=輳) Cf. p. 192.

3) *Ngo-tſeu* is an ancient name of *Wu-tſang-fu*, 武昌府 in de prov. *Hu-pěk*, situated east of *Kiang-ling*.

current everywhere. Because the number of credit bills was increased every year, and because they were not current any longer in trade, the army should positively be in want of food. But notwithstanding this the government lost sight of the warning embodied in the course of things, and caused again *Hoei-tsze* for the province of *Hu-pěk* to be made for an amount of 2.000.000 string to redeem with them the old *Hoei-tsze*.

The fragment which follows now is found in Ma-twan-lin IX 29a—b succeeding that of page 201; we have purposely given it here at the end of the historical part, as it is a real cry of distress which broke from the hearts of a people bending under the insupportable burden of a totally depreciated paper currency, a condition at last resulting from the thoughtless extension of the representative medium of exchange as we have seen from our chronicle.

(Some provincial magistrates of which I omit the names<sup>1</sup>) lost their offices because of the assignats<sup>2</sup>). After having tried for years and months to support and maintain (these notes), the people had no longer any confidence in them, but were positively afraid of them. For the payment for government purchases was made in paper, the fund of the salt manufactories consisted of paper, the salaries of all the officials were paid in paper, the soldiers received their pay in paper. Of the provinces and districts, already in arrear, there was not one that did not discharge its debts in paper. Copper money which was seldom seen was considered a treasure. The capital collected together

1) The translation is a little freer than of other passages. 2) Cf. p. 164.

in former days to supply the border fortifications was quite exhausted and was a thing not even spoken of any more. So it was natural that the prices of commodities, rose while the value of the paper money fell more and more. Among the people this caused them, already disheartened, to lose all energy, the soldiers were continually anxious that they should not get enough to eat, and the inferior officials in all parts of the empire raised complaints that they had not even enough to procure the common necessities. All this was a result of the depreciation of the paper money. And is the paper money depreciated, the metallic money is consequently depreciated likewise<sup>2</sup>).

When in ancient days, as the money had its full value, paper money was issued, the effect was convenience and profit, but when at present, while there is a total want of metallic money, paper money is made, the effect of that paper money is corruption and disease, and moreover forgery increases daily.

Even when it was earnestly desired that the paper money should not depreciate, it is not possible to attain that end now.

And yet in the beginning of the period *Kien-lung* (960) under the reign of this family, the proceeds of the taxes were little as yet. In the east the rebellious tribes were subdued and, in the west the enemy was defeated, but arms and food <sup>1)</sup>) were not cut off on the roads, and they (the rulers of that time) did not try to have recourse to paper money

1) 養廉 a legal addition to the salary of officials.

2) This means perhaps that copper coin was then issued so base as to be on a level with the depreciated paper as it was in Austria in the year 1810.

3) 實 the effect, the result, the fruit.

4) 藉 to lean on for aid, to have recourse to.

to make the state firm, strong and united<sup>1)</sup>). Since the period *Tsing-k'ang* (1126—27) abroad, the Barbarians were driven out of their country, and at home, a new dynasty was established<sup>2)</sup>. (Then there was really a great want of money) but at the left advances were made, and at the right the payment was delayed, and there was no day when this did not occur, and yet they have not tried to take recourse to the paper money to mend that condition<sup>3)</sup>). When come to the last year of the period *Sao-hing* (1163) projects were made to meet the general want of a medium of exchange, and come to the emperor *Hiao-tsung* (who ascended the throne in 1163), ever making projects and inventing means, this (paper money) was devised, but it was not yet attempted to do to the utmost what was not wrong<sup>4)</sup>). In that time at home there were three imperial palaces built, and abroad there were the usual yearly expenses, but in making paper money the only fear was the over-issue (that too much would be made) and in redeeming them it was feared that it would be impossible to pay them up to the last, or that there would be something by which the confidence with the people might be shaken. But since the reigns of the emperors *Kwang-(tsung)* and *Ning-*

1) 開國 is literally to found a state.

With the consolidation of China into 960 after the division under the "five families" in view, the rendering, though free, is justified.

2) In 1127 the southern *Sung* ascend the throne. The driving out of the Barbarians is little more than boasting. Cf. p. 178.

3) 中興 to repair, to fit up, to renew.

4) i. e. the issue of paper money was not yet so far extended as might have been without risking the credit of the state. 不曲 is by ante-position put at the beginning of the phrase.

(*tsung*) the number that was made exceeded all limits and the depreciation was worst. And yet (however wretched the condition may be) there is a luminous point. When a proper and moderate use is made of them without awaiting help from boggies in caves and woods, and it is attempted to observe a due proportion in motion and rest, so that there is not at once a flood of issue, such a proceeding, notwithstanding the present depreciated condition may be the means by which it is possible to rear the paper money up to its original state.

Now that the historical parts are treated of as far as Ma-twan-lin's book gives them, I will proceed to give the criticism of the authors who witnessed the social ruin of those times. First of all the opinion of Ma-twan-lin himself, a piece so excellent as to the economical principles which are promulgated in it, that for this little fragment alone the author has already a high reputation<sup>1)</sup> in the eyes of our modern writers on money. And indeed, albeit that his theories have been somewhat altered and modernized by authors who copied from each other the passage of M. E. BIOT's essay<sup>2)</sup>, which is already translated rather freely, Ma-twan-lin nevertheless fully deserves the praise which has been lavished on him. Our author's opinions on paper money are so true and correct, his criticism of the history of his time so sound and judicious, that this passage, which moreover excels in elegance of style and language, is unquestionably the best in the whole book. [IX. 33a—35b].

## MA-TWAN-LIN'S CRITICISM.

○按錢幣之權。當出於一。上。  
 漢時常令民自鑄錢。及武帝則專令上林三官鑄錢。而天下非三官錢不得行。之。上。郡國前所鑄錢皆廢銷輸。其銅三官然錢以銅鐵鉛錫而成。而歷代多即坑冶。運搬鐵錫。而附近之所置監鑄錢。亦重難。是以歷代多即坑冶。其用日廣。亦以錢之直日輕。中興<sup>1)</sup>以來始轉而爲楮幣。用不以容。不以多置監治。鑄以供用。不以中興以來。始轉而爲楮幣。用不以容。不以多置監治。鑄以供用。不以

If we observe the great power and significance of money, (and) that it must be issued by the supreme government, it is also necessary that the function of the state officials who make the money returns to one (person or institution).

During the *Han*-dynasty the people had been allowed for a time to cast money for their own use, till the emperor *Wu-ti* carefully charged a college of three officials from the *Sang-lin* with the coining of money, and in the whole empire there might not circulate any other money than what was made under the supervision of that college. All the money formerly cast in different districts and provinces was abolished, melted, and the copper (bullion) carried to the (new) mint-college. Thus was the money made of a composition of copper, iron, lead and tin. But as the transport of it by water as well as over land was difficult and troublesome, the later dynasties in the immediate neighborhood of the money mines and foundaries, then existing, have established government work shops for the casting of money. But because the relative value of the money continually decreased while the use made of it increased daily, and the number of foundaries and government workshops could not be made larger in order that, by casting constantly more, the want (of money) might be supplied, (therefore) since the empire (under the *Sung*-dynasty) was re-united under one scepter, the government has

1) 中興 to renew, to repair, refers to the consolidation of China under the *Sang*-dynasty (960)

夫錢重而直少。則多置監以鑄之。可也。楮輕而直多。則就行都印造足矣。今旣有行在會子。又有川引淮。引湖會各自印造。而其末也。收換不行。稱提無策。何哉。蓋置會子之初意。本非卽以會爲錢。蓋以茶鹽鈔。卽之屬視之。而暫以權錢耳。然鈔引則所直者重。承平時解鹽場四貫八百售一鈔。請鹽二百斤。而會子則止於一貫。下至三百二。

begun to make and circulate bits of paper made of the bark of the mulberry-tree. That at the time when the money was heavy and of slight value, several government work shops were established for the casting of it, stands to reason, but with respect to the paper money which is light of weight while it has a great value, it had, in my opinion, been sufficient, when only the capital (of the empire) had been resorted to to have it printed and made.

At present there are, besides the already circulating *Hoei-tsze*, the credit notes of (Sse) *ts'uen*, those of the *Hoai* provinces and the *Hoei-tsze* of the *Hu* regions, and each of those provinces prints and makes them for itself, and the end of it is that the re-payment does not take place, and that they are no more a means balancing the actual possession (of money). How is this? With the very first intention to institute *Hoei-tsze*, it was not originally so that the *Hoei(tsze)* were looked upon as money, but they were then considered to be of the nature of the receipts for tea, salt, and other government productions, balancing money only temporarily. (Only these points of difference there were between these three sorts of credit notes) that the receipts for commodities were upon the whole of a greater value. When one took a sum of 4 string 800 cash (4800) to the government salt stores, one received in return a bill which could be exchanged for 200 pounds of salt. The *Hoei-tsze* however were only of one string and lower down to 300 and 200 cash. Furthermore there was only printed on the receipts that the merchants must present them in order to receive for them tea,

salt, aromatics (or other) articles, and therefore for these notes a separation and division into several districts was necessary, as, for instance receipts for lump salt could only circulate in *Sen-si*, while receipts for crushed salt are current only in the *Kiang* and *Hoai* regions.

The *Hoei-tsze*, on the contrary, served to be given and taken in payment, when private as well as public persons bought or sold something, without the occurrence (of the fact) that they disappeared, not to be used any more (like the receipts). Moreover, another evidence that they served as a substitute for the ready metallic money, is that they were made of the value of from one string to 200 copper pieces. And so much the more, now by means of a shred of paper of the size of one foot a quantity of many pounds of copper could be substituted, now by circulating the lighter, the heavier was actually employed, and the strength of one man was sufficient to make that a quantity of tens of thousands of strings at a fixed time arrived at places some thousands of miles distant, what necessity was there then that *Sse-ts'uen* should have *Sse-ts'uen* receipts of its own, and *Hoai*, its own *Hoai* notes, and *Hu* its own *Hu* bonds; and this must needs be the reason that afterwards some were abolished and some remained in use, that the names (of the notes) were continually altered, and that in this way the people not knowing any more what to trust, grew suspicious? When the various notes were made for the two *Hoai* districts, for *King-(ts'eu-fu)* and other districts of *Hu-kwang* and *Hu-pěk*, the original intention of the government and its desire was that they should be used only for a short time, and then to abolish them. But it did not know that, once fal-

詳初是而造。受來鑑。間知卽

len and streaming among the people, they would be considered as advantageous as the ready money strung together. The reason why later withdrawals and re-payments only produced new issues, and that after having been repeatedly increased (in number), they at last fell in value in proportion as the number issued became greater, is because in the beginning when the law (of the issue of paper money) was made and the plan was discussed (the government) had not penetrated all the particulars of that institution.

The two following accounts of paper money have not the high economical interest of Ma-twan-lin's own criticism, but nevertheless they are worth being communicated, bearing witness of the impression, the utterly failure and ruin of paper money made on the intelligent and thinking part of the contemporaries.

*Tung-lai* of the family-name *Liu*, [Matw. IX 39a—b] without being aware of it himself, advocates the free-banking system; the system as it had developed itself in the province of Šo where paper money had been introduced as a substitute for iron. "For that reason," he says, "the bills of exchange, though they were properly no money, could for a long time continue regularly to circulate as money, but as to the other parts of the empire the advantages and disadvantages of the use of paper money by no means were the same." "Its power lies herein," he proceeds, that it was made by the people themselves and was put confidence in by the government."

"But," he continues, — and here his opinion is entirely influenced by his prejudice, because of the paper money having had such a bad effect — "but in the other parts of the empire where copper

money was the common medium of exchange, paper money was not wanted; and a favorable result of the use of paper money can be imagined only when there is no other medium of exchange than the inconvenient iron, and even then it should be allowed to regulate the circulation only for a short time. In the present time, however, copper money is much better adapted to the purpose than paper."

To avoid the repetitions of our Chinese economist only the substance of his long discourse has been communicated. The following criticism on currency by Šui-sin of the family-name of *Ye* is, however, remarkable enough to be given again in full. [Matw. 42b—43b].

CRITICISM OF ŠUI-SIN OF THE FAMILY YE.

道。無錢來賤。之變。錢通行。物隱沒。上下相。惟貨其間。輕重。於世者。私家用。惟藏重。夫古者。度天。融積貨。之易。今下。則流蓄之。往貴物。之。則雖轉。然迭物。之。非雖。

Of all that is transacted there is nothing which does not circulate by means of money, even though the regulation of the money is left to private persons, and it is the money alone which, unobservedly and without (its influence) being seen, causes all productions of the earth to circulate among the generations. All the changes that we have observed in ancient and modern times, during the succession of a many generations, those constant changes in the prices of commodities and in the value of the money, and its continual fluctuations even in those different periods, all these are phenomena which we cannot know beforehand. The currency comes near to a supernatural object, no fixed rule can be given to keep it and gather it; it ever goes on and, like the steam issuing forth from the kettle, it diffuses itself and whirls, and everywhere we see its effect and its use.

方見其功用。今世富人旣務藏錢。而朝廷亦盡征天下錢入於王府。已入者不使之出。乃立楮<sup>1)</sup>於外以待之。不如錢以通行天下爲利。錢雖積之甚多。與他物何異。人不究其本原。但以錢爲少。只當用楮。楮行而錢益少。故不惟物不可得而見。而錢亦將不可得而見。然自古今之弊。相續。至于今日。事極則變。物變則反。必須更有作新之道。但未知其法。當如何變得。其決不可易者。廢交子。然後可使所藏之錢。

The rich people of the present time have made it their business to hoard up the money in their depositories, and likewise, after having exhausted the taxes, the government has put the money of the empire in the royal treasury. And what is once put in it cannot be got out again; and then the paper money has been instituted and brought out to supersede ') (the copper money). But that (paper money) is not so advantageous as the copper money to circulate through the empire. Though ever so much copper money has been hoarded up, what then is the difference between this and other goods? But people do not search into the basis and origin of things, and they think that paper money should be used only because there is a want of copper money. But now the paper money circulates, and the quantity of money is little, the result of this will be, not only that no commodities are to be had or to be seen, but also will it be cause that even no money will be had or seen any more. But since the corruption and misery of ancient and modern times have succeeded each other till this very day, it has always been seen that when matters had reached a climax, a change was nigh, and as once that change comes a whole revolution is the result, and so it must be positively now that a new way will be opened, but we do not know what that way shall be. If once that revolution has been brought about, it cannot be changed any more. When the paper money is now abolished it may result in the re-appearance of the stored up metallic money. Now as the way of wealth and power is situated

1) 待 *tai* is here again very probably used instead of 代 *tai* to supersede. Cf. page 45, note 2.

 也。非其賤世交易輕貴。則於  
 聖變由錢易

there where is abundance of commodities, and in consequence of those commodities being in abundance they are cheap, and for that reason the money is dear, (i. e. gets back its original value<sup>1)</sup>), and if the money has again its value it may be weighed in light and heavy, and barter and exchange can go on again, so at present, now the money is of very little value, and this again results from the scarcity of commodities, not even a saint would be able to point out the means to bring about a radical change in this condition<sup>2)</sup>.

But no saint did descend from Heaven and the Chinese, earthly beings as they were, continued to involve themselves in still greater difficulties, and the revolution which the prophetic look of our last quoted author had foreseen actually came but too soon.

Ma-twan-lin has brought his "Examination" down only to this time, but from Wang-k'i's Continuation of Ma-twan-lins work<sup>3)</sup> we learn how one issue succeeded the other, how every time new names were invented to delude the people, solemn promises were made that henceforth the government should fulfil what it had charged itself with, and how the result was that again and again old debts were paid by incurring new in order to defer the impending bankruptcy of the state.

I will not weary my readers with the details of the sad his-

1) In contradistinction to the condition of the present time when money is cheap or has no value whatever when people wants to buy something with it.

2) The construction of this phrase is: "to point out a means by which a radical change might be brought about, he who is

not a saint would not be able to do.

3) 續文獻通考. Continuation of the General Examination of History and Scholars by 王圻 Wang-k'i,

tory, but only quote the last few lines of Wang-ki's monetary history of the Sung-dynasty which run as follows: [Wang-ki XVII, p. 15b.]

價銀見改稱是如苦民物會寧○  
頓關<sup>2)</sup>錢造提似之朝不價子宗按  
踴行關金楮道<sup>1)</sup>何。廷勝踴壅之宋  
矣。物子。銀幣請至無其甚。滯世史

If we examine the historiographers of the Sung-dynasty, we see that already in the time of the emperor Ning-tsung (1195—1225) the Hoei-tsze did not circulate any longer (lit were stopped in their course). The prices of all commodities rose enormously. The people could not endure their misery any more, and the government did not more know what to do. As it had come so far (Kia-sse-t'ao<sup>2</sup>) suggested to alter the paper parcels which balanced the actual possession, and to exchange them for frontier-bills for ready money, estimated in gold and silver. But when those silver-bills circulated the prices of commodities suddenly rose still higher.

The incessant attacks of the Mongols who already under Genghis Khan had conquered a great part of Asia, at last overthrew the feeble structure, and made an end of the Sung-dynasty. An alien mounted the throne, and since that time the nomadic princes have ruled over the Middle-Empire for about a century.

The assertion that paper money has been one of the leading causes of the fall of the Sung-dynasty is a thesis which will hardly be gainsaid by those who have read the history of this institution from its glorious beginning to its wretched end.

It is indeed not to be wondered at that after those fatal results which China was to experience twice more in after times, the government superseded the paper money by a metallic currency, and for ever abolished paper money issued by the State.

1) Kia-sse-t'ao, was the perfidious premier of the emperor Tu-tsung (1265—75) under whose government the Mongols conquered the whole of China. MAYERS I. 252.

2) 關 = 關子 Cf. p. 187 note 1.

Had that history been known earlier, it might have taught a great lesson to Europe and America, and preserved them from those evils which were to work incalculable misery and irreparable loss; evils which in many countries of the world reveal themselves, alas, too strongly in the social condition of the present time, and which are so well expressed by WEBSTER who, speaking of paper money, says: "We have suffered more from this cause than from every other cause or calamity. It has killed more men, pervaded and corrupted the choicest interests of our country more, and done more injustice than even the arrows and artifices of our enemy."

## DESCRIPTION OF THE FAC-SIMILE OF THE CHINESE BANKNOTE OF THE TAI-MING DYNASTY.

belonging to the Collection of the Asiatic Museum of the Imperial Academy of Science at St. Petersburg.

ACCORDING TO SU-WEN HIEN-T'UNG K'AO.

*Size of the original 32—21 centm.*

Vol. XVIII p. 10b.

太祖洪武八年令  
中書省造大明寶  
鈔取桑穣<sup>1)</sup>爲鈔料  
其制方高一尺闊  
六寸許以青色爲  
質外爲龍文花欄  
橫題其額曰大明  
通行寶鈔內上兩  
旁復爲篆文八字  
曰大明寶鈔天下兩  
串則爲一貫其狀  
下曰。十串則爲一貫

In the 8th year of the period *Hung-wu* (1375) the emperor *Tai-tsu* issued an order to his minister of finances to make the *Pao-tsao* (precious bills) of the *Tai-ming* dynasty, and to employ as raw material for the composition of those bills the fibres of the mulberry tree<sup>1)</sup>. They should be made of a square form, one foot in length and six *tsün* ( $\frac{6}{10}$  foot) in width; the substance (the paper to print the bill on) should be of a green-blue color. Outside (in the upper border) was the figure of a dragon, and the crossbars which were at right angles with the front, were ornamented as balustrades of flowers. Of the inscription the front part runs "General current precious bill of the *Tai-ming* dynasty". At both in and outside there are eight characters in seal writing running "Precious bill of the *Tai-ming* dynasty current, in the whole empire". In the centre a drawing is made on the bill, representing a string of 1000 *cash* in the form of ten strings of 100, which thus makes one *Kwan* (string of 1000). Below this the inscription runs: (*Chinese text on the bill*).

1) 桑穣. The translation by the fibres of the mulberry tree is a little free, 穣 properly signifies the culm or stalk of grain. But we know from elsewhere that paper is made of the 桑 *Morus* or more generally of the 楮, the *Broussonetia*

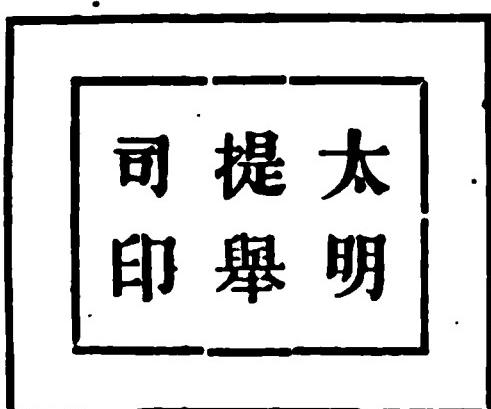

*papyrifera*, and not of the straw of cereals, I have closely examined the stuff of the original bill and found no traces of straw whatever; I have therefore 桑 taken in the possessive case and 穣 in the signification of the fibres.

"According to a memorial presented by (our) minister of finances it is assented: to print and coin the precious bills of the "Tai-ming dynasty, which together with copper coin are everywhere current. He who makes and uses forged bills shall be beheaded, and he who denunciates or arrests (the forger) shall receive a reward of 250 taels of silver; besides he shall receive the moveable property and real estate of the criminal.

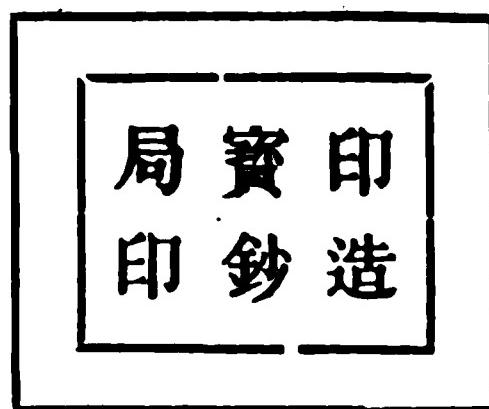

"The -- day of the -- month of the -- year of the period "Hung-wu (1368—1399) <sup>1).</sup>."

Of the two red seals there is quite as much discernible on the photography as on the original. With the aid of the magnifying glass and by consulting Wang-k'i's history I have tried to make them out and believe them to be as follows.

1

2

1. Seal of the officials under the *Tai-ming* dynasty who bring the bills in circulation <sup>2).</sup>

2. Seal of the bank where the precious bills are printed and coined.

1) The just date is not readable on the original. Perhaps it was written in pencil and has disappeared in the course of time. The fold in the middle of the bill and its contracted state in that part are evidences that it has been in circulation and carried folded in the breast pocket or money belt. The fold is easily to be distinguished on

the photography.

2) 舉提司 Cf. monn. in voce 官  
n° 114. Those officials occur in Wang-k'i's Chronicles as issuers of the credit bills. Cf. further p. 189, 190 and p. 199, where likewise is spoken of the red seal marks of banknotes.
